CHAPTER XVII.—THE DELINQUENT, DEFECTIVE, AND DEPENDENT CLASSES.

CLASSES FOR WHICH DATA ARE AVAILABLE.

In special reports issued by the Bureau of the Census data are available relating to prisoners and juvenile delinquents, the insane in institutions, the feeble-minded in institutions, the blind, deaf-mutes, and paupers in almshouses. The scope of the detailed statistical analysis and textual treatment of these reports is partially indicated in the following sections, as regards the Negro element in the population; more fully as regards Negro prisoners and juvenile delinquents than as regards Negro defectives and dependents, this fuller treatment being justified by the broader interest attaching to the subject of criminality and by the less

technical character of the census data of criminality, as well as by the fact that the class of prisoners and juvenile delinquents is numerically much larger than any other of the special classes designated. For a complete statistical account of any of the several delinquent, defective, and dependent classes reference must be made to the full reports from which the following data are selected and in which the significance of the data for Negroes is made more clearly apparent by extended analyses and by constant relation of data for Negroes to data for other racial classes, in detail by state areas.

SECTION I.—PRISONERS AND JUVENILE DELINQUENTS.¹

The 1910 census of prisoners and juvenile delinquents secured data relating to persons serving sentences in penal or reformatory institutions on January 1, 1910, and also data relating to persons committed under sentence to such institutions during the calendar year 1910. The 3,271 institutions canvassed included 3 Federal penitentiaries, 58 state prisons or penitentiaries, 20 reformatories for adults or adults and juveniles, 100 reformatories for juveniles exclusively, 2,502 county jails or workhouses or similar institutions, and 588 municipal jails or workhouses. In accordance with the usage established at prior censuses the term "juvenile delinquents" distinguishes inmates of reformatories exclusively for juveniles, the term "prison-

ers" including without regard to age the inmates of all other penal or reformatory institutions. The data collected by the census comprised sex, age, race, nativity, marital condition (of prisoners), illiteracy, occupation before commitment, offense of which convicted, and sentence.

RATIO OF COMMITMENTS.

As shown in Table 1, 30.6 per cent of the total number of prisoners and juvenile delinquents enumerated on January 1, 1910, and 21.9 per cent of the total number committed during the year 1910 were Negroes, whereas the percentage Negro in the total population was only 10.7. Per 100,000 Negro population the number of Negro prisoners and juvenile delinquents enumerated on January 1 was 424.6, and the number committed during the year 1,101.7, the ratios for Negroes being markedly in excess of the corresponding ratios shown for whites (118.8 and 467.4 per 100,000 respectively).

NUMBER, RATIO, AND PERCENTAGE DISTRIBUTION OF PRISONERS AND JUVENILE DELINQUENTS, BY RACIAL CLASSES: 1910.

RACIAL CLASS.	PRISONERS AND JUVENILE DELINQUENTS: 1910.						Per-centage distribution of population: 1910.

¹ Separate figures not available.

In every division, as appears in Table 2, the percentage Negro was much higher among prisoners and juvenile delinquents than in the general population, and in every division, also, it was higher for the prison population on January 1 than for the commitments during the year—a fact which indicates that the term of imprisonment for Negroes was above the average for all prisoners.

Table 3 gives, for Negroes and whites, by sections and southern divisions, and for states having a Negro population of 10,000 or more in 1910, the ratio of commitments per 100,000 population, and a coefficient of difference obtained by dividing the ratio for Negroes by that for whites.

In general, prison and jail commitments are less frequent relatively to the population in the South than in the North for whites as well as for Negroes. It is obvious, however, that the relatively low ratio of commitments in the South, where nine-tenths of the Negroes are located, will have more influence in lowering the ratio for the United States in the case of Negroes than in the case of whites. For this reason figures shown for the United States do not fully reveal the contrast between the two races as regards the frequency of jail and prison commitments, the ratio of commitments for Negroes in the entire United States being about two and one-half times that for the whites, while in the divisions and states, with few exceptions, the difference is more marked. In the South the ratio for Negroes is 3.4, in the North 5.6, and in the West 4.5 times that for whites. In some of the states the contrast is still more striking.

The ratio of commitments for all classes of the population is greater in cities than in rural districts; and that may explain to some extent the fact that the contrast between the two races is more pronounced in the North than in the South. For the North is more urban than the South; and in the North the proportion of

Negroes living in cities, defined as incorporated places of over 2,500 inhabitants, greatly exceeds the proportion of whites living in such places, 77.4 per cent of the northern Negroes being residents of urban territory in 1910, as compared with 58.3 per cent of the northern whites. In the South, on the other hand, the difference between the two races in this respect is not very great; in fact, in the two south central divisions there is practically no difference between the Negroes and whites as regards the percentage living in cities, while in the South Atlantic division the higher percentage is that for whites.

¹ Includes figures for the United States penitentiaries, which are not shown separately in this table.² Per cent not shown where base is less than 100.

Negroes, as already noted, constituted a little more than one-fifth (21.9 per cent) of the total number of prisoners and juvenile delinquents committed in the year 1910 for all offenses. They represented 56 per cent of the total number committed for grave homicide, 49 per cent of the total for lesser homicide, and 41.1 per cent of the total for assault. They contributed 33.6 per cent, or one-third, of the commitments for prostitution and fornication, and almost as large a proportion of the commitments for robbery, burglary, and larceny, and for violating liquor laws. On the other hand, they comprised only about 16 per cent of those committed for drunkenness and disorderly conduct and for vagrancy.

While these figures and those given in tables following will probably be generally accepted as indicating that there is more criminality and law breaking among Negroes than among whites and while that conclusion is probably justified by the facts, it should be borne in mind that the difference between the two races in this respect may very well be less than the ratios based on the number of commitments to prison or jail would indicate. It is a question whether the difference shown by the ratios may not be to some extent the result of discrimination in the treatment of white and Negro offenders on the part of the community and the courts. An offense committed by a Negro is perhaps more likely to be punished than the same offense committed by a white man, especially if the victim of the offense committed by the Negro is white, while in the other case the victim is Negro. It is probable that as compared with the white man the Negro when brought to trial on a criminal charge is in fewer instances able

to employ expert counsel to defend his case and assist him in taking advantage of any technicalities in the law which may be in his favor. Moreover, in the case of those offenses for which the penalty may be a fine with imprisonment as the alternative if the fine is not paid, it is probable that the Negro is more often unable to pay the fine than the white man and is therefore more likely to be sent to jail; but of course this consideration has little weight in connection with the more serious offenses which are seldom penalized by fines only. On the other hand, it is not improbable that many of the minor offenses committed by Negroes and not directly affecting white people are more likely to be disregarded by the officers of the law than are the same offenses committed by the whites. Although these are questions on which no statistical data can be presented and in regard to which opinions may differ, it seems proper to call attention to them as representing possibilities which ought to be considered before accepting the record of prison commitments as an accurate measure of the difference between the two races in respect to criminality. It must always be borne in mind that the amount of crime punished in different classes or communities may not bear a fixed or unvarying ratio to the amount of crime committed.

The percentage of Negroes in the total number of commitments for any given offense is naturally much larger in the South than in either the North or the West. Thus the percentage of Negroes in the total number of commitments for grave homicide was 26.1 in the North, 74.4 in the South, and 8.5 in the West. But if the several offense groups are ranked with respect to the percentage of Negroes in the commit-

ments it will be found that the order for the North does not differ radically from that for the South, that is to say, an offense for which the rank as respects the percentage of Negroes is relatively high in the North will show a relatively high rank in the South also. Thus in the North the five offenses for which the percentage of Negroes was largest were in the order of the size of the percentage (shown in parentheses) as follows: Grave homicide (26.1), prostitution and fornication (24.5), lesser homicide (22.4), robbery (22.3), and assault (19.8). In the South the corresponding list comprised assault (76.2), grave homicide (74.4), larceny (72.5), robbery (71.8), and burglary (68.8). Three of the specified offenses appear in each list. The list for the North, however, includes prostitution and fornication, ranking second, and lesser homicide, ranking third, offenses which in the South ranked respectively eighth and sixth, while the list for the South includes larceny, ranking third, and burglary, ranking fifth, offenses which in the North ranked sixth and seventh, respectively.

The five offenses for which the percentage of Negroes was smallest were in the North forgery (5.2), fraud (6.7), drunkenness and disorderly conduct (6.7), malicious mischief and trespass (7.7), and offenses peculiar to children (9.4); in the South they were offenses peculiar to children (20.8), forgery (38.2), fraud (46.5), drunkenness and disorderly conduct (50.9), and malicious mischief and trespass (51). The lists are identical, the only difference being one of order caused by the difference in the relative importance of offenses peculiar to children.

In the West the percentage of Negroes was conspicuously high (17.9) in the commitments for prostitution and fornication.

The ratio of commitments per 100,000 population and the coefficient of difference, presented in the preceding table, show that for every offense the contrast between the whites and Negroes is greater in the North than in the South. In this connection reference may be made to the probable influence of the fact already mentioned that in the North the Negroes are concentrated in cities to a much greater degree than the white population.

In Table 6, which presents figures by geographic divisions, the whites and Negroes committed in 1910 are divided into two broad classes as regards offense, one class comprising those committed for drunkenness and disorderly conduct and the other those committed for all other offenses.

¹ Number of prisoners and juvenile delinquents committed in 1910 per 100,000 population of the same race.

In the United States as a whole, and in every division, the ratio of commitments for each class of offenses is larger for Negroes than for whites, but the difference between the two races in this respect is always less marked in the case of drunkenness and disorderly conduct than it is for other offenses. Thus for the United States as a whole the ratio of commitments per 100,000 population for drunkenness and disorderly conduct among Negroes (424.9) was one and six-tenths times the corresponding ratio among whites (267.8), but as regards the total for all other offenses the ratio in the case of Negroes (676.7) was three and four-tenths times that in the case of whites (199.6). A similar relationship is indicated by the figures for each section and geographic division, the coefficient of difference between the races being always less for drunkenness and disorderly conduct than for other offenses. In the South as a whole the coefficients were, respectively, two and one-half and four and one-half, which means that in proportion to their

numbers Negroes in the South are committed for drunkenness and disorderly conduct two and one-half times as often as white men, but are committed for other offenses four and one-half times as often.

As between the North and the South it is very evident that the ratios are to a large degree determined by local conditions affecting both races alike, because for Negroes as well as whites the ratios for each class of offenses distinguished in Table 6 are much lower in the South than in either the North or the West. In respect to either class of offenses it will be found that the difference between the Negroes and the whites in the ratio of commitments is greater in the North than in the South. In this connection it should be remembered that the Negroes are very unevenly distributed over the Northern states, that they are concentrated largely in a few cities or in districts bordering the Southern states, and that many Northern states with a large white population have only a negligible number of Negroes. Accordingly, in any aggregates such as those presented in Table 6 covering groups of states, the difference in the geographic distribution of the two races must have a considerable effect upon the figures, but an effect which can not be easily measured or determined. For instance, in the West North Central division 65 per cent of the Negroes in 1910 were in the one state of Missouri, as compared with 28 per cent of the whites; and consequently conditions in that state have a much greater influence upon the division totals for Negroes than upon those for whites. Moreover, the marked differences in distribution obtain not only as between states but within the same state. In the state of New York, for instance, 78 per cent of the Negroes in 1910 were in the city of New York and only 52 per cent of the whites. It is evident, therefore, that in the Northern states the figures for the two races are affected by local influences which are widely divergent.

SENTENCE.

In Table 7 Negro and white prisoners and juvenile delinquents committed in 1910 are classified with respect to the general character of the sentence imposed, and those committed under sentence of imprisonment without fine are further classified by length of sentence.

Of the 130 offenders sentenced to death, 49, or 37.7 per cent, were Negroes; among those sentenced to imprisonment and fine the proportion of Negroes was 28.3 per cent; and among those imprisoned for nonpayment of fine it was 24.3 per cent. Of the prisoners and juvenile delinquents sentenced to imprisonment without fine, 16.4 per cent were Negroes.

Of those sentenced to imprisonment without fine for a definite term of one year or longer, 40.9 per cent were Negroes; of those sentenced for a term of less

than one year, 13.4 per cent. This difference is partly explained by conditions in the South, where for both races the proportion of commitments for long terms is greater than in the North. In other words, it is in part a sectional difference rather than a racial one. Nevertheless, more detailed tabulations show that even within the same geographic division or the same state the percentage Negro is as a rule greater among those committed for long terms than among those committed for short terms, and that the percentage Negro tends to increase with each extension in the length of the imprisonment sentence, starting with 10.5 for prisoners and juvenile delinquents sentenced for less than one month and reaching 49.3 for those sentenced for five years or over.

¹ Less than one-tenth of 1 per cent.

² Includes life sentence.

The last columns of Table 7 show the percentage distribution of the white and the Negro prisoners and juvenile delinquents by nature and length of sentence. The death sentence was reported for less than one-tenth of 1 per cent of any class of prisoners, but was relatively more frequent for Negroes committed than for whites. The sentence to imprisonment without fine was imposed upon 37.3 per cent of the white offenders and 25.9 per cent of the Negro. The sentence to imprisonment and fine, on the other hand, was relatively more frequent among the Negro offenders than among the white, 11 per cent of the former as against 7.8 per cent of the latter receiving this form of sentence.

Persons imprisoned for nonpayment of fine comprised 62.7 per cent of the total number of Negroes committed, as compared with 54.6 per cent of the total number of whites. This difference might be regarded as being indicative of the wider prevalence of poverty among Negroes as compared with whites, but from an inspection of Table 8, giving figures by geographic divisions, it appears to be due mainly to the difference in the geographic distribution of the two races.

Table 8

United States penitentiaries.....	243	709				

As regards the percentage imprisoned for nonpayment of fine, shown in the above table, it may be noted that the difference between the two races, although rather marked for the United States as a whole, is much less so in most of the divisions, and furthermore that while for the United States as a whole the percentage for Negroes (62.7) was considerably higher than that for whites (54.6), there are only two divisions, the Middle Atlantic and the East South Central, in which that was likewise the case. In two of the other divisions, New England and the South Atlantic, the two percentages were nearly identical, and in the remaining divisions the percentage for whites was somewhat higher than that for Negroes. It is evident, then, that the comparatively high percentage of commitments for nonpayment of fine shown for Negroes in the total for the United States reflects conditions in the South, where such commitments are more common for both races than in other sections of the United States.

The percentage of prisoners imprisoned for nonpayment of fine, it may be noted, is determined by two independent factors—first the percentage of convicted offenders receiving a sentence of fine only, and second the percentage of those receiving such a sentence who fail or refuse to pay the fine. It is quite probable that within the same state or community a smaller percentage of the Negro offenders than of the white are merely fined, because the figures already presented indicate that a smaller proportion of the Negroes than of the whites are convicted of minor offenses. On the other hand, it is probable that among Negroes who are merely fined the percentage unable to pay is larger than in the same class of white offenders. Thus the one factor would tend to make the percentage imprisoned for nonpayment of fine smaller in the total number of Negro

prisoners committed than in the total number of white, while the other factor would have the opposite tendency; and it may very well be that the fact that in most geographic divisions the percentages for the two races are not far apart indicates that these opposing tendencies nearly equalize or offset each other.

In Table 9 the Negro and white prisoners and juvenile delinquents sentenced to imprisonment only are classified with respect to the term of sentence.

Table 9

PRISONERS AND JUVENILE DELINQUENTS COMMITTED IN 1910 UNDER SENTENCE OF IMPRISONMENT ONLY.

LENGTH OF SENTENCE.	Number.		Percentage distribution.	
	Negro.	White.	Negro.	White.
Life.....	490	281	1.7	0.2
Definite term.....	24,458	117,570	87.1	82.6

Indeterminate.....	1,663	15,975	5.9	11.2
Not reported.....	210	639	0.7	0.4

Of the white prisoners and juvenile delinquents committed in 1910 under sentence of imprisonment without fine, 74.3 per cent, or nearly three-fourths, were sentenced for a definite term of less than one year; in the case of the Negroes the proportion was much smaller, the percentage being 58.8. On the other hand, the percentage committed for a definite term of one year or over was 28.3 for Negroes, as against 8.2 for whites.

¹ Includes figures for the United States penitentiaries which are not shown separately in this table.

As is shown in the preceding table, the indeterminate sentence was imposed on a considerably larger proportion of the white than of the Negro prisoners and juvenile delinquents (11.2 per cent as compared with 5.9 per cent) partly because it is a form of sentence more common in the North than in the South.

In the South, as in the country as a whole, it was more usual for white prisoners than for Negro. Outside the South, on the other hand, a larger proportion of the Negro prisoners than of the white received this form of sentence in every division except New England.

The following table, presenting a classification by length of sentence, is restricted to prisoners committed for life or for a definite term of imprisonment without fine. It does not, therefore, include those sentenced to death or for their minority or for an indeterminate period, those sentenced to imprisonment and fine, or those imprisoned for nonpayment of fine.

Table 11

Less than year.....	16,508	13.4	105,851	66.2	89.8
7 to 11 months.....	640	36.8	1,094	2.6	0.9
6 months.....	2,165	18.9	2,932	8.7	7.8
4 to 5 months.....	863	22.7	9,219	3.5	2.5
3 months.....	1,280	14.1	13,871	9.1	11.8
2 months.....	1,703	15.4	9,318	6.8	7.9
1 month.....	3,517	12.7	24,009	14.1	20.4
Less than 1 month.....	5,338	10.5	45,408	21.4	38.5

The table brings out the very marked contrast between the two races as regards the length of sentence. Of the Negroes sentenced to a definite term of imprisonment without fine or for life, 33.8 per cent, or one-third, received a sentence of one year or more, while the corresponding percentage for whites was only 10.2. On the other hand, only 21.4 per cent of the Negroes, as against 38.5 per cent of the whites, received a sentence of less than one month, and 35.5 per cent of the former, as against 58.9 per cent of the latter, received a sentence of less than two months.

That there may be some discrimination between whites and Negroes as regards the penalty imposed for the same offense is not improbable, but it is reasonably certain that this is not the principal explanation of the difference in the length of sentence shown for the two races. Two other factors influence the figures. One is the difference in the practice of the courts and in the laws of different states as regards the penalties prescribed or imposed for crimes and misdemeanors, conditions in the South, where a relatively large proportion of the prison commitments are for long terms, having, of course, more influence upon the totals for Negroes than upon those for whites. The other factor referred to is the difference in the relative number of

minor offenses committed by each race. As shown by figures previously presented, 68.3 per cent of the white offenders were committed for drunkenness, disorderly conduct, or vagrancy, while for Negroes the corresponding percentage was but 46.2. A difference such as this would naturally have a marked effect upon the relative length of sentence for the two classes.

Table 12, which gives by geographic divisions the distribution by length of sentence of the prisoners and juvenile delinquents sentenced to imprisonment for life or a definite term without fine, shows that in every geographic division except one, the Mountain division, a larger percentage of the Negro offenders of this class than of the whites were committed for a term of one year or longer. The difference is quite as pronounced in the northern divisions as in the southern, but it is again evident that the difference in the United States as a whole is partly a result of the difference in the geographic distribution of the two races.

¹ Includes life sentence.

In most divisions the percentage sentenced for less than one year but not less than one month is larger

for the Negroes than for the whites. The difference between the races, however, is most striking as regards the percentage sentenced for less than one month, this percentage being invariably much smaller for the Negroes than for the whites.

Table 13 shows the approximate average length of sentence in months for white and Negro prisoners and juvenile delinquents sentenced to definite terms of imprisonment in each geographic division.

In the United States as a whole the average length of sentence for Negroes is more than three times that for whites, but in none of the geographic divisions except the East North Central is the relative difference as great as this, although in every division except one (the Mountain division), the sentence for Negro offenders is considerably longer than that for white.

Table 13

AGE.

As shown by Table 14, Negroes constituted about one-third of all prisoners and juvenile delinquents committed who were between the ages of 15 and 25, about one-fourth (24.1 per cent) of those between 25 and 35, hardly more than one-eighth (13.8 per cent) of those between 35 and 45, and less than one-twelfth of those 45 or over. This decrease in the percentage in the older age groups is consistent with the fact that the percentage of Negroes, as shown by figures already presented, is much below the average in the commitments for drunkenness and disorderly conduct and for vagrancy, taken in connection with the further fact that these are offenses which account for a large proportion of the total number of commitments in the older age groups.

Of the prisoners committed when under the age of 15, about one-fifth were Negroes. The proportion is thus considerably smaller than it is in the age groups from 15 to 34, a circumstance which may be due in part to the fact that a larger proportion of the Negroes than of the whites live in states or communities where there are no juvenile reformatories. The establishment of

these institutions doubtless has a tendency to increase the number of commitments of juvenile offenders, since they receive for purposes of reformation children who are guilty of juvenile offenses or misconduct not serious enough to justify commitment to a prison or jail. Therefore, where such institutions are lacking, youthful offenders guilty of those juvenile offenses are apt to be allowed to remain at large in the community. But there is still another important factor to be considered in this connection, namely, that one of the offenses for which large numbers of juveniles are committed—truaney—does not come into existence in any community until laws for compulsory school attendance are adopted and enforced. In short it is an offense which is created by the enactment of such laws; and a larger proportion of the Negroes than of the whites live in sections where there are no such laws, and where there is, therefore, no such offense.

¹ Number committed per 100,000 population of the same race and age.

NEGRO POPULATION.

As indicated by the coefficient in the above table, the difference between the whites and the Negroes as regards the ratio of commitments is relatively small in the period of childhood but shows a tendency to increase in each older year of life, up to the age of 16. For each age group shown within the age period 16 to 24 years, the ratio of commitments for Negroes is about four times as great as that for whites. In the age group 25 to 34 years, however, the ratio for Negroes is less than three times that for whites, and in the age group 35 to 44 years it is only about one and one-half times as great, while after the age of 44 it is below that for whites.

In the case of the Negroes the ratio of commitments reaches its maximum in the age group 21 to 24 years, while in the case of the whites the maximum falls in the age group 35 to 44 years.

Table 16 shows separately for the whites and the Negroes the number and ratio of commitments, by age groups, in the South and in the North. Although totals are given for the West also, the figures are not given by age because of the small number of Negroes in that section.

The table shows that in every age group, both in the North and in the South, the ratio of commitments is higher for Negroes than for whites, the contrast between the two races in this respect being greater in the North than in the South.

In both sections the contrast between the whites and the Negroes as regards the ratio of commitments is most pronounced between the ages of 15 and 25, and becomes less marked in each older group up to the age of 65. This results from the fact that the ratio for Negroes declines rapidly after the age of 25, while that for whites in the South declines more slowly and in the North increases up to the age of 45.

Both in the North and in the South the ratio for Negroes reaches its maximum in the age group "21 to 24 years." The ratio for whites in the South also reaches its maximum in this age group, but is almost as high in the next two older groups ("25 to 34 years" and "35 to 44 years"); in the North, as already noted, it increases up to the age of 45, the maximum falling in the group "35 to 44 years."

Although for the United States as a whole (see Table 15), the ratio of commitments in each age group above 45 is smaller for Negroes than for whites, Table 16 shows that this is not the case in either the South or the North. This is another instance of the effect which the difference in the geographic distribution of the two races has upon the totals for the United States. Since 89 per cent of the Negroes live in the South as compared with 25 per cent of the whites, the influence which the low ratios generally prevailing in the South have upon the United States totals is greater for Negroes than for whites, and this explains why the ratio of commitments above the age of 45 is lower for Negroes than that for whites in the United States as a

whole, although it is not so in either the North or the South.

¹ Number committed per 100,000 population of the same race and age.

The coefficient of difference between the North and South as regards the ratio of commitments per 100,000 of whites and Negroes, respectively, is shown by age groups in Table 17.

This table further emphasizes the fact, brought out by the preceding table, that the excess of the ratio of commitments for the North over that for the South is in every age group greater in the case of the Negroes than in that of the whites. This is probably because the Negroes in the North, as already stated, are concentrated in the cities to a much greater extent than the whites, while there is little difference in the distribution of the two races in the South. In the case

of both whites and Negroes the difference between the two sections is greatest in the age groups under 15 and over 45. The coefficient of difference for Negroes is fairly uniform between the ages of 18 and 45; while that for the whites is uniform between the ages of 15 and 25, after which it increases regularly up to the age group "55 to 64 years," remaining practically stationary in the final group.

ratio for whites being 13 to 1. In this respect the sex contrast is accordingly much greater for the whites than for the Negroes. It follows as a corollary that the proportion of Negroes is greater among females committed than among males; in fact, 42.6 per cent of the total number of female prisoners and juvenile delinquents committed in 1910 were Negroes, as compared with 19.7 per cent of the total number of male offenders.

Male.....	100.0	30.8	68.5	100.0	18.9	79.6
Female.....	100.0	28.1	71.6	100.0	42.6	57.0

In the case of Negroes 19.1 per cent, and in the case of whites 7.2 per cent, of the prisoners and juvenile delinquents committed in the year 1910 were females. Among Negroes, therefore, the ratio of male to female offenders was approximately 4 to 1, the corresponding

ratio for whites being 13 to 1. In this respect the sex contrast is accordingly much greater for the whites than for the Negroes. It follows as a corollary that the proportion of Negroes is greater among females committed than among males; in fact, 42.6 per cent of the total number of female prisoners and juvenile delinquents committed in 1910 were Negroes, as compared with 19.7 per cent of the total number of male offenders. In the prison and jail population (prisoners and juvenile delinquents enumerated on January 1), as compared with the commitments, the contrasts are not as great as regards either the percentages of females in the totals for each race or the percentage of Negroes in the totals for each sex. Moreover, the percentage of females was larger for whites (9.2) than for Negroes (8.1) and the percentage of Negroes was larger among males (30.8) than among females (28.1). These differences between the prison population and the prison commitments as regards race and sex distribution are probably the outcome of variations in the average term of imprisonment, the figures indicating that the average is greater for Negro males than for white, and at the same time greater for white females than for Negro. The differences in this average are in turn presumably determined largely by differences in the nature and gravity of the offenses for which the different sex and race classes were committed, the figures indicating the probability that in the case of males the proportion of major offenders was greater among Negroes than among whites, and that in the case of the females the difference was the other way, the proportion being probably smaller for Negroes than for whites. It may be noted, however, that while the classification by offense bears out this inference as regards males it does not make the situation altogether certain as regards females. Other factors, however, may influence the duration of imprisonment, as for instance, the relative number committed to reformatories, which is considerably larger for white females than for Negro.

Table 19 shows the ratio of commitments per 100,000 population for males and females of the white and the Negro race separately.

Table 19

SEX.	PRISONERS AND JUVENILE DELINQUENTS COMMITTED IN 1910.				
	Number.		Ratio of commitments. ¹		
	Negro.	White.	Negro.	White.	Coefficient of difference.
	A	B	A	B	A÷B
Both sexes.....	108,268	382,052	1,101.7	467.4	2.4
Male.....	87,598	354,367	1,792.9	840.2	2.1
Female.....	20,670	27,685	418.3	70.0	6.0

¹ Number committed per 100,000 population of the same race and sex.

The contrast between the races as regards the ratio of commitments per 100,000 population was much greater for the female sex than for the male, the ratio for females of the Negro race (418.3 per 100,000) being almost six times the corresponding ratio (70 per 100,000) for females of the white race, while in the case of males the one ratio was hardly more than twice as great as the other (1,792.9 per 100,000 for Negro males, as against 840.2 for white males).

It may be noted that a tabulation by geographic divisions shows that in every division the percentage of Negroes was much larger among the female offenders committed than among the male. In the North 21.9 per cent, or more than one-fifth, of the female offenders were Negroes, as compared with 8.3 per cent of the male offenders; in the South the percentage Negro was 82.1 among female offenders and 55.5 among male offenders. For every geographic division also as well as for the United States as a whole, the difference between the races as regards the ratio of commitments to penal or reformatory institutions was much greater for the female than for the male sex. Thus in the North the coefficient of difference between Negroes and whites was 4.9 for males and 14.7 for females, which means that while Negro males in proportion to their numbers are committed about five times as often as white males, Negro females are committed about fifteen times as often as white females. In the South these coefficients were respectively 3.1 and 10.5. In some of the geographic divisions the contrast is still more striking.

SEX AND OFFENSE.

In Table 20 the prisoners and juvenile delinquents, total and Negro, committed in 1910 are classified by sex and offense.

¹ Per cent not shown where base is less than 100.

Among the male offenders as classified by offense the percentage of Negroes reaches its maximum in the group convicted of grave homicide, 526, or 55.7 per cent, of the 944 males committed for this offense being of the Negro race. The next highest percentage of Negroes was that for lesser homicide (47.6), followed by that for assault (38.4). Relatively low percentages are shown for drunkenness and disorderly conduct (13.1), vagrancy (14.3), and forgery (14.2). The lowest percentage is that for offenses peculiar to children (9.7).

Of the 110 females committed for lesser homicide, 80, or 72.7 per cent, were Negroes, and the proportion was about the same in the case of grave homicide, although the percentage is not given in the above table. The percentage of Negroes was still higher among females committed for assault, being 80.3. For larceny it was 58.5. For prostitution and fornication the percentage of Negroes among female offenders was 37.8, which is the lowest percentage shown in the above table, with the exception of that for the group of offenses peculiar to children.

Table 21 gives the ratio of commitments by offense for white and Negro males and females.

¹ Number of prisoners and juvenile delinquents committed in 1910 per 100,000 population of the same race and sex.
² Less than one-tenth of 1 per 100,000.

For every class of offenses distinguished in the above table, except that of offenses peculiar to children, the ratio of commitments is higher for Negroes than for whites of the same sex, the difference being always greater for females than for males. For some offenses, however, the number of females committed is so small (see Table 20) that one may hesitate to attach much significance to the exact difference in the relative numbers committed as indicated by the ratios. But it is probably significant that in proportion to their numbers 11 times as many Negro women as white women

committed for larceny and about 33 times as many for assault. In the case of prostitution and fornication, and of drunkenness and disorderly conduct the difference is not as great, the commitments for these offenses being proportionately about 5 times as frequent among Negro females as among white.

SEX AND AGE.

Table 22 gives the ratio of commitments per 100,000 Negro and per 100,000 white population, by sex and age.

For the Negroes of each sex the ratio of commitments reached its maximum in the age group "21 to

24 years," while for whites of each sex the maximum falls in the age group "35 to 44 years."

In practically every age group the difference between the races as regards the ratio of commitments is more pronounced for females than for males; but the contrast is greatest in the ages from 18 to 24, inclusive, when the ratio for Negro males is between 3 and 4 times as great as that for white males, while the ratio for Negro females is from 11 to 16 times that for white females.

Tabulations by geographic sections show that in every age group the ratio of commitments for either sex of either race is considerably higher in the North than it is for the same sex and race in the South. In the North as well as in the South the ratio of commitments for the Negroes of either sex reaches its maximum in the age group "21 to 24 years" and diminishes steadily in each older age group. This statement is true also of the ratio for the whites in the South; but in the North the ratio for the whites reaches the maximum in the age group "35 to 44 years." In every age group, both in the North and in the South, the ratio of commitments is higher for the Negroes of either sex than for the whites of the same sex, and the radical difference in this respect is always greater for the female sex than for the male. Generally, moreover, the racial difference is greater in the North than in the South, exceptions occurring only in the case of females within the age groups "45 to 54 years" and "55 to 64 years." The totals for the entire United States, presented in Table 22, show that above the age of 45, the ratio of commitments was smaller for Negro males than for white males; but this is not the case in either the North or the South considered separately.

SECTION II.—INSANE AND FEEBLE-MINDED.¹

NUMBER AND RATIO OF INSANE.

Statistics relative to the insane in institutions for 1910 were obtained by means of a special census covering insane inmates present in institutions for the insane on January 1, 1910 and insane persons admitted to such institutions during the calendar year 1910. The canvass was made through the agency of officials or other persons connected with the institutions who were commissioned as special agents of the Bureau of the Census.

The number of institutions canvassed was 366, and the number of insane for whom data were obtained, 248,560, of whom 187,791 were present in institutions on January 1 and 60,769 were admitted during the year.

¹ For a full presentation of statistics relating to the insane and the feeble-minded, see report of the Bureau of the Census (217 pages) on the Insane and Feeble-minded in Institutions: 1910.

Table 23 classifies the insane enumerated on January 1 and the number admitted during the year, by race in comparison with the total population.

NEGRO POPULATION.

The 187,791 insane in hospitals enumerated on January 1 included 12,910 Negroes, and the 60,769 insane admitted to hospitals during the year included 4,354 Negroes. Negroes thus constituted 6.9 per cent of the insane enumerated at the beginning of the year and 7.2 per cent of the insane admitted during the year. The percentage Negro among the insane was accordingly very considerably below the percentage Negro (10.7) in the general population.

For Negroes the ratio of inmates present on January 1 per 100,000 Negro population was 131.4, the corresponding figure for whites being 213.2. The ratio of admissions per 100,000 population was 44.6 for Negroes and 68.7 for whites.

These ratios did not, however, obtain with any degree of uniformity in the several geographic divisions and states. Outside the South, as is shown in Table 24, the ratios for Negroes were in fact higher than those for whites in each division. In New England, for instance, the ratio per 100,000 population for inmates enumerated on January 1 was 473.6 among Negroes and 296.9 among whites, the corresponding figures for admissions being 153.8 for Negroes and 105.9 for whites.

THE WEST.				
Mountain.....	265.5	137.6	135.1	62.6
Pacific.....	322.0	242.4	195.2	82.7

In each southern division, as in the United States as a whole, lower ratios are shown for Negroes than for whites. In the South Atlantic division the ratio for inmates enumerated on January 1 was 129.1 among Negroes and 181.3 among whites; in the East South

Central division, 95.6 for Negroes and 125.5 for whites; and in the West South Central, 77.2 for Negroes and 101.4 for whites.

In several Southern states, however, as in the North, higher ratios are shown for Negroes than for whites.

Definite conclusions as to the relative prevalence of insanity among Negroes and whites in the several sections of the country are not warranted by these data. It is quite improbable that there is any variation in the prevalence of insanity among the adult population from state to state, or from division to division, such as seems indicated by the figures given in Table 25. The difference in the relative numbers admitted to asylums for the insane may be influenced by the geographic distribution of the two races, by differences, sectional or racial, in practice as regards taking steps to have the insane placed under institutional care or restraint, and by relative sufficiency of the provisions made for caring for the insane of each race. What the effect of such factors may be it is impossible to determine, but they certainly account largely for the differences which have been noted.

SEX.

Table 25 classifies the insane of each racial class, by sex, and gives for each class the sex ratios among the insane and in the general population.

Table 25

¹ Ratio not shown, the number of females being less than 100.

For each racial class the proportion of males was higher among the insane than it was in the general population, and among the insane, as in the general population, the proportion was lower for Negroes than for whites.

Table 26 gives, by geographic divisions, the ratio of insane in hospitals per 100,000 population among Negroes, native whites, and foreign-born whites, classified by sex. In each of the nine divisions, with exception of the East South Central, the ratio of Negro insane admitted to hospitals during the year per 100,000 population was higher for males than for females. In each southern division the ratios among both males and females were lower for Negroes than for whites, and in each northern and western division were higher for Negroes than for whites.

The effect of age upon the ratios for Negroes and for whites in the South and in the North is illustrated in the accompanying diagram.

DIAGRAM I.—RATIO OF NEGRO AND WHITE INSANE ADMITTED TO HOSPITALS IN THE NORTH AND IN THE SOUTH PER 100,000 POPULATION OF THE SAME AGE AND RACE.

In the North the ratio of admissions was higher for Negroes than for whites in every age group, although in one group, "55 to 59 years," the ratio was practically identical. Too much significance, however, should not be attached to minor variations between

NEGRO POPULATION.

the different groups, for the reason that in the North the number of Negroes in the older groups is so small that a small change in the number committed from any one group would have a considerable effect upon the ratio. The comparison is of value mainly as indicating that in the North the higher ratio of admissions for Negroes as compared with whites is not explainable by the difference in the age composition of the two races.

Similarly, the comparison for the South, as given in Table 27, does not indicate that the difference between the races as regards the ratio of insane is affected to any appreciable degree by the age factor. The ratio for Negroes is consistently lower than that for whites in every age group, with one exception, and it is doubtful whether this exception, occurring in the age group "15 to 19 years," possesses any special significance; at least, it has very little effect upon the totals for the respective races.

URBAN AND RURAL INSANE.

With regard to the Negroes of the North it should be remembered that they are mostly located in large cities and furthermore that a large proportion of them are immigrants from the South. Doubtless these two circumstances have a direct bearing upon the prevalence of insanity among them. Being city dwellers they are exposed to those influences which in general make the insanity rate higher in cities than in rural districts. Being immigrants they have to adjust themselves to a new environment which so far as they are concerned is probably an unfavorable one both in climatic and in industrial and social conditions.

In Table 28 the insane admitted to hospitals in 1910 are classified according to prior residence, as coming from urban or from rural communities, and ratios per 100,000 population are given based upon this classification. The table shows that, except among Negroes in New England, the ratio was higher for the urban than for the rural population among both Negroes and whites in each division. These differences, however, probably largely represent more adequate provision

for the insane in urban communities as compared with rural, and can not be taken as indicating accurately the effect of urban conditions as factors conducing to insanity.

THE FEEBLE-MINDED.

Feeble-mindedness has been broadly defined as comprising all degrees of mental defect due to arrested or imperfect mental development as a result of which the person so affected is incapable of competing on equal terms with his normal fellows, or of managing himself or his affairs with ordinary prudence. The feeble-minded as thus defined range in mental development from those whose mentality does not exceed that of a normal child of 2 years to those whose mentality is as high as that of a child of 12. The great majority of the feeble-minded are not confined in institutions but live at large; many are inmates of prisons and reformatories; many others are in almshouses, and some are confined in hospitals for the insane. Only a small fraction of the feeble-minded are taken care of in special institutions designed for that class.

Table 29 classifies the feeble-minded in institutions in 1910, and gives ratios per 100,000 population.

Table 29 FEEBLE-MINDED IN INSTITUTIONS: 1910.

RACIAL CLASS.	FEEBLE-MINDED IN INSTITUTIONS: 1910.				PERCENTAGE DISTRIBUTION: 1910.		
	Number.		Per 100,000 of specified racial class.		Feeble-minded.		Total population.
	Enumerated on January 1.	Admitted during the year.	Enumerated on January 1.	Admitted during the year.	Enumerated on January 1.	Admitted during the year.	
All classes.....	20,731	3,325	22.5	4.2	100.0	100.0	100.0
Negro.....	280	85	2.8	0.9	1.4	2.2	10.7
White.....	20,411	3,737	25.0	4.5	98.6	97.7	89.9
Other.....	10	3	2.4	0.7	(1)	0.1	0.4

¹ Less than one-tenth of 1 per cent.

Of the 20,731 persons enumerated in institutions for the feeble-minded on January 1, 280 were Negroes; and of the 3,825 feeble-minded persons admitted to such institutions during the year 85 were Negroes. It will be apparent that the ratios shown in Table 29 are largely fictitious so far as regards the relative

prevalence of feeble-mindedness among Negroes and whites—the relatively low ratio for Negroes being explained by the fact that approximately nine-tenths of that population were in the South, in which section there were few institutions established for the feeble-minded.

SECTION III.—THE BLIND.¹

NUMBER AND RATIO.

Census data for the blind in 1910 were secured in part on the general population schedule which carried a column for reporting blindness, and in part on special schedules mailed to each person reported on the general schedule as blind.

Table 30 gives, by racial classes, the number returned as blind on the general schedule, with exception of persons erroneously so classified in the original returns, by the enumerators, and ascertained subsequently, upon return of the special schedule, to be not blind under the census definition of the term.

Table 30

RACIAL CLASS.	POPULATION: 1910.				
	Number.		Distribution, per cent.		Blind per 100,000 of class specified.
	Total.	Blind.	Total.	Blind.	
All classes.....	91,972,296	57,272	100.0	100.0	62.3
Negro.....	9,827,761	8,849	10.7	15.5	90.0
White.....	81,731,957	47,585	88.9	83.1	58.2
Indian.....	315,683	804	0.3	1.4	302.6
Chinese, Japanese, and other.....	146,883	34	0.2	0.1	23.2

Of the 57,272 persons enumerated on the population schedule as blind in 1910, 8,849, or 15.5 per cent, were Negroes, the proportion Negro in the blind population exceeding the proportion Negro, of 10.7 per cent, in the general population. The number returned as blind per 100,000 Negro population was 90, the corresponding proportion for whites being 58.2 per 100,000. The ratio of blindness for Negroes was higher than that for whites, but lower than that for Indians. The relatively high ratio for Negroes is explained partially by the fact that the Negro population is largely resident in rural districts, where medical facilities are poor. In such communities diseases having blindness as a

more or less frequent consequence may be left to run their course unchecked, and generally the country over; these diseases are probably less effectively combated among Negroes than among whites. As a natural consequence the ratio of blindness is higher for Negroes than for whites in each geographic division.

SEX.

Table 31 classifies the blind population in 1910, by racial class and sex.

Table 31

RACIAL CLASS.	BLIND POPULATION: 1910.					
	Number.				Per 100,000.	
	Both sexes.	Male.	Female.	Males to 1,000 females.	Male.	Female.
All classes.....	57,272	32,443	24,829	1,307	68.5	55.6
Negro.....	8,849	4,971	3,878	1,282	101.7	78.5
White.....	47,585	26,994	20,591	1,311	64.0	52.1
Indian.....	804	451	353	1,278	333.7	270.4
Chinese, Japanese, and other.....	34	27	7	(¹)	20.3	50.6

¹ Ratio not shown where number of females is less than 100.

In each racial class the proportion of males in the blind population exceeds the proportion in the general population of that class, the ratio per 100,000 population being higher for males than for females in each class. In the case both of males and of females the ratio for Negroes exceeds the ratio for whites, but is much lower than the ratio for Indians.

AGE.

The diagram on page 452 illustrates the difference between Negroes, native whites, and foreign-born whites in the ratio of blindness at each age, the ratio for Negroes exceeding the ratio for each of the white classes at each age.

Table 32 gives the age distribution of the blind population, classified by sex, race, and nativity.

¹ For a full presentation of statistics relating to the blind, see report (342 pages) on the Blind population of the United States: 1910, Bureau of the Census: 1917.

DIAGRAM II.—NEGRO, NATIVE WHITE, AND FOREIGN-BORN WHITE BLIND POPULATION PER 100,000 GENERAL POPULATION OF THE SAME RACE, NATIVITY, AND AGE, BY 5-YEAR AGE GROUPS: 1910.

ABILITY TO READ RAISED TYPE.

Table 33 classifies the Negro and the white blind population 5 years of age and over, for whom special schedules were returned in 1910, with reference to ability to read raised type. Of the Negroes, 85 were able to read raised type per 1,000 reporting; and of the whites, 234, the difference being mainly due to a difference in the relative number who had attended a special school for the blind. Among Negro males the number able to read raised type, per 1,000 reporting, was 85 and among Negro females 86, the corresponding numbers for whites being 222 for males and 252 for females.

Table 33

RACIAL CLASS AND SEX.	BLIND POPULATION 5 YEARS OF AGE AND OVER FOR WHOM SPECIAL SCHEDULES WERE RETURNED: 1910. ¹			
	Total.	Able to read raised type.	Unable to read raised type.	No report.

¹Includes the small number whose age was not reported.

SECTION IV.—DEAF-MUTES.¹

NUMBER.

In connection with the Thirteenth Decennial Census a special schedule of inquiry was sent out to every person reported on the general population schedule as deaf and dumb. Upon these schedules data were secured relating to 19,153 deaf-mutes. In Table 34 these deaf-mutes are classified by race.

Table 34

RACIAL CLASS.	DEAF-MUTES: 1910.		Percentage distribution of total population: 1910.
	Number.	Percentage distribution.	
All classes.....	19,153	100.0	100.0
Negro.....	1,069	5.6	10.7
White.....	18,016	94.1	89.9
Indian.....	66	0.3	0.3
Chinese and Japanese.....	2	(¹)	0.2

¹ Less than one-tenth of 1 per cent.

The 1,069 Negro deaf-mutes constituted 5.6 per cent of the total number of deaf-mutes of all classes, the proportion Negro among deaf-mutes being approximately one-half the percentage Negro in the general population. This is probably to be accounted for in part at least by failure more frequently among Negroes than among whites to return the special schedules mailed out from the Census Office. It may be noted, however, that mortality returns tabulated by the Bureau of the Census indicate that the colored are less susceptible than whites to certain of the diseases which are important causes of adventitious deafness—such, for example, as measles, scarlet fever, and diphtheria. While the death rate from measles in 1914 was only slightly higher for whites than for Negroes, the death rate from diphtheria was nearly twice as great and that for scarlet fever was practi-

¹ For a full presentation of statistics relating to deaf-mutes, see report on Deaf-mutes in the United States: 1910, Bureau of the Census: 1918.

cally four times as great for whites as for Negroes. On the other hand, Negroes appear to be somewhat more susceptible to meningitis, another leading cause of deaf-mutism, than are whites.

Although in the South Atlantic and East South Central divisions Negroes formed in 1910 about one-third (33.7 and 31.5 per cent, respectively) of the total population, and in the West South Central division more than one-fifth (22.6 per cent), they contributed less than one-fifth (19.5 per cent) of the deaf and dumb population returning schedules in the South Atlantic division, less than one-sixth (15.2 per cent) of that in the East South Central, and less than one-tenth (9.8 per cent) of that in the West South Central. Since these differences seem entirely too large to be accounted for by the difference in the proportion of the respective races returning the special schedules, the figures rather confirm the supposition that deaf-mutism is less common among Negroes than among whites.

SEX DISTRIBUTION.

Table 35 classifies the deaf-mutes returning special schedules in 1910, by sex and race. Negroes as well as whites show an excess of males among deaf-mutes, although females are in excess in the Negro population as a whole.

Table 35

RACIAL CLASS.	DEAF-MUTES: 1910.			MALES TO 1,000 FEMALES OF SPECIFIED RACIAL CLASS: 1910.	
	Both sexes.	Male.	Female.	Deaf-mutes.	Total population.

Negro.....	1,069	584	485	1,204	589
White.....	18,016	9,888	8,128	1,217	1,066
Other.....	68	35	33	(¹)	1,857

¹ Ratio not shown, number of females being less than 100.

NEGRO POPULATION.

SCHOOL ATTENDANCE.

Table 36 classifies Negro and native white deaf-mutes with reference to school attendance and instruction.

EDUCATION.	DEAF-MUTES 10 YEARS OF AGE AND OVER: 1910.			
	Number.		Percentage distribution.	
	Negro.	Native white.	Negro.	Native white.
Total.....	1,061	15,889		
No report as to education. Number reporting.....	16 1,045	186 15,703	100.0	100.0
Had attended school.....	548	13,743	52.4	87.5
Special school for the deaf. Other school only.....	528 20	13,429 284	50.5 1.9	83.7 1.8
Had not attended school.....	497	1,960	47.6	12.5
Private instruction at home. No instruction.....	9 488	86 1,874	0.9 46.7	0.5 11.9

Of the 1,045 Negro deaf-mutes reporting as to school attendance, 548, or 52.4 per cent, reported that they had attended school, and of these 528, or 50.5 per cent of the total reporting, had attended a special school for the deaf; 497 had not attended school, and of these, 9 reported private instruction at home, and 488, or 46.7 per cent of the total, reported that they had received no instruction of any sort either in

school or at home. Of the native white deaf-mutes, 87.5 per cent had attended school, and only 11.9 per cent reported that they had received no instruction of any kind.

MEANS OF COMMUNICATION.

In Table 37 the Negro and white deaf-mutes are classified with reference to their ability to use speech, writing, finger spelling, sign language, or miscellaneous methods of communication.

SECTION V.—PAUPERS IN ALMSHOUSES.¹

NUMBER AND PROPORTION OF ALMSHOUSE PAUPERS.

Recent census statistics relating to paupers are confined to inmates of almshouses. Recipients of outdoor relief are not enumerated, nor are any inmates of institutions other than almshouses. Such statistics are not, of course, presented as measuring the extent of poverty in different communities, since factors other than poverty largely determine the number of paupers in almshouses, such as, for example, the adequacy of the supply of almshouses, the prevailing policy in regard to outdoor relief, climatic conditions, the combination of free hospitals for the poor with almshouses, and the development of special institutions for children and for the physically and mentally defective.

Paupers enumerated in almshouses on January 1, 1910, numbered 84,198, of whom 6,281 were Negroes, and the number admitted to almshouses during the calendar year 1910 was 88,313, of whom 6,807 were Negroes.

For all classes combined and for each class shown separately in Table 38, the number of admissions during the year exceeded the number enumerated on January 1. It is apparent from the figures given

that the almshouse population is characteristically transient.

RACIAL CLASS.	PAUPERS IN ALMSHOUSES: 1910.				DISTRIBUTION PER CENT: 1910.		
	Number.		Per 100,000 population of specified racial class.		Paupers in almshouses.		Total population.
	Enumerated on Jan. 1.	Admitted during the year.	Enumerated on Jan. 1.	Admitted during the year.	Enumerated on Jan. 1.	Admitted during the year.

White.....	77,917	81,506	95.1	99.3	92.3	92.3	88.9
Indian.....	74	130	27.9	48.9	0.1	0.1	0.3
Other.....	109	241	74.2	164.1	0.1	0.3	0.2

Table 39 classifies Negro and white paupers by sections and divisions. Negroes constituted a large proportion of the almshouse population as of the general population in the three southern divisions, but only an inconsiderable proportion of the almshouse population in the North and West.

The ratio of almshouse pauperism in the country as a whole was about the same in 1910 among Negroes as among native whites. Tabulations by sections and divisions, however, give a ratio much higher for Ne-

¹ For a full presentation of statistics relating to paupers, see report on Paupers in Almshouses: 1910—Bureau of the Census: 1918

groes than for native whites in the North and West, the difference between these classes being less considerable in the South.

The ratio of Negro, native white, and foreign-born white paupers in almshouses per 100,000 population in each class is shown, by sections and divisions, in Table 40.

SEX.

Table 41 classifies paupers in almshouses in 1910, by sex, race, and nativity, and gives the sex ratio for paupers in comparison with the corresponding ratio for the total population of each class. For each racial class the proportion of males to females is much higher among paupers than it is in the general population.

CHAPTER XVIII.—HOME OWNERSHIP AND SIZE OF FAMILIES.

FARM HOMES AND OTHER HOMES.

For each family returned on the census schedule some information is returned regarding the home occupied by the family, the number of homes being precisely equal to the number of families.

Homes of Negro families are classified in Table 1 as farm homes and other homes, for the three years 1910, 1900, and 1890. A farm home is defined in the instructions to enumerators as "a home located on a farm, for which a farm schedule should be secured."

Table 1

HOMES OF NEGRO FAMILIES.

CLASS OF HOME.	Number.			Percentage distribution.		
	1910	1900	1890	1910	1900	1890
	All homes.....	2,173,018	1,833,759	1,410,769	100.0	100.0
Farm homes.....	877,648	758,463	549,632	40.4	41.4	39.0
Other homes.....	1,295,370	1,075,296	861,137	59.6	58.6	61.0

At each of the last three censuses approximately two out of five Negro homes on the average have been classified as farm homes. Such homes constituted 40.4 per cent of all Negro homes in 1910, the corresponding percentage for 1900 (41.4) being slightly above, and that for 1890 (39) slightly below the percentage for 1910. Relatively to the total number of Negro homes the proportion of farm homes thus remained fairly constant during this period, although the number of farm homes increased from 549,632 in 1890 to 877,648 in 1910. Homes other than farm homes increased in the same period from 861,137 to 1,295,370.

The number of Negro farm homes (877,648) in 1910 corresponded closely to the number of Negro farms, as given in the chapter on agriculture (893,370), there being a few instances of Negro farms upon which no Negro farm homes were located.

HOME OWNERSHIP INQUIRY.

For the return of information regarding ownership of homes in 1910 two columns were provided on the population schedule, in the first of which each home occupied by a family was described as owned or as rented, and in the second, each owned home as owned free or mortgaged.

The essential instructions given to census enumerators to guide them in making these returns were as follows:

Home owned or rented.—If a dwelling is occupied by more than one family it is the home of each of them, and the question should be answered with reference to each family in the dwelling.

Owned homes.—A home is to be classed as *owned* if it is owned wholly or in part, by the head of the family living in the home, or by the wife of the head or by a son, or a daughter, or other relative living in the same house with the head of the family. It is not necessary that full payment for the property should have been made or that the family should be the sole owner.

Rented homes.—Every home not owned, either wholly or in part, by the family living in it should be classed as *rented*, whether rent is actually paid or not.

Home owned free or mortgaged.—This question applies only to those homes classed as owned homes and not to rented homes. All owned homes which are not fully paid for, or upon which there is any encumbrance in the form either of a mortgage or of a lien upon which judgment has been had in a court, are to be reported as mortgaged.

The first investigation as to ownership of homes was made in 1890, in compliance with a special act of Congress, and covered such items as value of mortgaged homes, amount of mortgage debt, and rate of interest. In 1900 the scope of the home-ownership inquiry was restricted, as in 1910, to a classification of homes as owned or rented, and of owned homes as owned free or mortgaged.

HOMES OWNED AND RENTED.

Negro homes are classified as owned or rented in Table 2, for the years 1910, 1900, and 1890. In this table, in order to produce figures comparable with those for 1890, homes for which no report of ownership was made in 1910 and in 1900 have been distributed as owned or rented in proportion to the distribution of homes for which ownership reports were made. In 1890 the apportionment of the no-report-cases was by counties, while the apportionment for 1900 and for 1910 is made by geographic divisions. The degree of comparability for divisional and sectional areas would not, however, be materially increased by making the apportionment for 1910 and for 1900 on the basis of returns for counties.

Table 2

HOMES OF NEGRO FAMILIES.

CLASS OF HOME AND PROPRIETORSHIP.	Number.			Percentage distribution.		
	1910	1900	1890	1910	1900	1890
	All homes.....	2,173,018	1,833,759	1,410,769	100.0	100.0

Rented.....	1,010,315	870,869	717,587	78.0	81.0	83.3

NEGRO POPULATION.

The number of homes owned by Negro families occupying them at the time of census enumeration increased from 264,288, or 18.7 per cent of all Negro homes, in 1890, to 397,420, or 21.7 per cent, in 1900, and to 506,590, or 23.3 per cent, in 1910. Of farm homes the proportion owned increased from 22 per cent in 1890 to 25.4 per cent in 1900, the proportion in 1910, 25.2 per cent, being practically the same as in 1900. Of homes other than farm homes, the proportion owned increased from 16.7 per cent in 1890, to 19 per cent in 1900, and to 22 per cent in 1910.

HOMES OWNED FREE AND ENCUMBERED.

Table 3 classifies Negro owned homes in 1910, 1900, and 1890 as owned free and encumbered. In this table, as in Table 2, in order to produce figures comparable with those for 1890, the no-report cases in 1910 and in 1900 have been apportioned in proportion to the known cases, on the basis of divisional totals.

CLASS OF HOME AND PROPRIETORSHIP.	OWNED NEGRO HOMES.					
	Number.			Percentage distribution.		
	1910	1900	1890	1910	1900	1890
All owned homes...	506,590	397,420	264,288	100.0	100.0	100.0
Free.....	374,833	295,474	234,747	74.0	74.3	88.8
Encumbered.....	131,737	101,946	29,541	26.0	25.7	11.2
Owned farm homes...	221,535	192,953	130,738	100.0	100.0	100.0
Free.....	155,969	138,976	108,483	72.2	72.0	89.8
Encumbered.....	61,566	54,017	12,255	27.8	28.0	10.2
Owned other homes...	285,055	204,427	143,550	100.0	100.0	100.0
Free.....	214,884	150,498	126,264	75.4	76.6	88.0
Encumbered.....	70,171	47,929	17,286	24.6	23.4	12.0

The proportion owned free of owned Negro homes did not change materially during the decade 1900-1910, the percentage owned free for farm homes being 72 in 1900 and 72.2 in 1910, and for other than farm homes 76.6 in 1900 and 75.4 in 1910. These proportions were markedly below those shown for 1890, in which year 89.8 per cent of the owned farm homes, and 88 per cent of the owned other homes, were owned free of mortgage encumbrance.

Although the proportion owned free thus declined in the decade 1890-1900, this decline was not due to any decrease in the number of homes owned free—the number owned free, both of farm homes and of other homes, increasing in this decade as in the decade following—but to a relatively more rapid increase in the number of homes owned under a mortgage or other lien. Such ownership is undoubtedly in many cases a first step out of tenancy.

The increases during the two decades for farm and other homes owned free, owned encumbered, and rented are shown in Table 4.

Owned Negro homes increased during the decade 1900-1910 by 109,170, and during the decade preceding by 133,132, the increase of 242,302 for the entire twenty-year period amounting to an increase of 91.7 per cent, and being sufficient nearly to double the number of owned homes.

PROPRIETORSHIP.	INCREASE IN HOMES OF NEGRO FAMILIES.					
	All homes.		Farm homes.		Other homes.	
	1900-1910	1890-1900	1900-1910	1890-1900	1900-1910	1890-1900
Total.....	339,259	422,990	119,185	208,831	220,074	214,159
Owned.....	109,170	133,132	28,542	72,255	89,928	60,877
Free.....	79,279	80,727	20,963	30,468	58,386	30,234
Encumbered.....	29,791	72,405	7,549	41,787	22,242	30,643
Rented.....	230,089	289,858	90,643	136,576	139,446	153,282

While the absolute increase in the number of rented homes in each decade was more than twice as great as of owned homes, the proportional increase was much smaller for rented than for owned homes, the proportional increase for the twenty-year period amounting to 45.4 per cent for rented as compared with 91.7 per cent for owned homes.

HOMES IN THE SOUTH, THE NORTH, AND THE WEST.

The number of Negro farm homes and other homes is given by geographic sections in Table 5 for the years 1910, 1900, and 1890.

SECTION AND CENSUS YEAR.	HOMES OF NEGRO FAMILIES.					
	Number.			Percentage distribution.		
	All homes.	Farm homes.	Other homes.	All homes.	Farm homes.	Other homes.
United States:						
1910.....	2,173,018	877,648	1,295,370	100.0	100.0	100.0
1900.....	1,833,759	758,463	1,075,296	100.0	100.0	100.0
1890.....	1,410,759	549,632	861,127	100.0	100.0	100.0
The South:						
1910.....	1,917,391	851,658	1,065,733	88.2	98.5	81.3
1900.....	1,637,024	743,521	893,503	89.3	98.0	83.1
1890.....	1,262,707	535,631	727,076	89.5	97.1	84.7
The North:						
1910.....	242,920	12,431	230,489	11.2	1.4	17.8
1900.....	199,770	14,550	185,220	10.3	1.9	16.3
1890.....	142,957	15,578	127,379	10.1	2.3	14.8
The West:						
1910.....	12,707	523	12,184	0.6	0.1	0.9
1900.....	6,965	362	6,603	0.4	0.0	0.6
1890.....	5,125	373	4,752	0.4	0.1	0.6

Of Negro farm homes, 98.5 per cent were in the South in 1910, 1.4 per cent in the North, and 0.1 per cent in the West. Of homes other than farm homes, 81.3 per cent were in the South, 17.8 per cent in the North, and 0.9 per cent in the West, the proportion in the North being much larger (17.8 per cent as compared with 1.4 per cent) for homes other than farm homes than for farm homes.

The percentage owned is shown for Negro farm and other homes by sections in Table 6, the percentages being based upon the figures given in Table 7 in which

HOMES AND FAMILIES.

the no-report cases for each year have been distributed in proportion to the known cases.

Table 6 PERCENTAGE OWNED OF HOMES OF NEGRO FAMILIES.

SECTION.	PERCENTAGE OWNED OF HOMES OF NEGRO FAMILIES.								
	All homes.			Farm homes.			Other homes.		
	1910	1900	1890	1910	1900	1890	1910	1900	1890
United States.....	23.3	21.7	18.7	10.2	10.5	8.6	13.1	11.1	10.2
The South.....	23.3	21.3	17.7	11.1	11.2	8.9	12.2	10.1	8.8
The North.....	23.0	24.3	27.6	3.2	4.7	6.0	19.8	19.6	21.0
The West.....	33.7	29.0	29.1	3.3	3.9	5.6	30.5	25.1	23.5

In the South the percentage owned increased for Negro farm homes from 8.9 per cent in 1890 to 11.2 per cent in 1900, the percentage of 11.1 for 1910 being practically the same as that for 1900. Of homes other than farm homes the percentage owned in the South increased in each decade from 8.8 per cent in

1890 to 10.1 per cent in 1900 and to 12.2 per cent in 1910.

A larger proportion of Negro farm homes in the South were owned in each year than were owned of farm homes in the North and West, while of homes other than farm homes the proportion owned was much higher in the North and West than in the South. In 1910, for example, the percentage owned for Negro farm homes, which was 11.1 in the South, was 3.2 in the North and 3.3 in the West, and the percentage owned of homes other than farm homes, which was 12.2 in the South, was 19.8 in the North and 30.5 in the West.

Table 7 classifies Negro homes in 1910, 1900, and 1890 as owned and rented, and owned homes as free and encumbered, by sections and southern divisions, the no-report cases in each year being distributed in proportion to the known.

NEGRO HOMES, FARM AND OTHER, CLASSIFIED AS OWNED FREE, OWNED ENCUMBERED, AND RENTED, BY SECTIONS AND SOUTHERN DIVISIONS: 1910, 1900, AND 1890.

DIVISIONS AND STATES.

Data relating to Negro homes are given for divisions and states in Table 13 (pp. 466 to 469) for the years 1910 and 1900, and in Table 14 (p. 470) for the year 1890. Table 12 (p. 465) gives by divisions and states the number of owned Negro homes in 1910 and in 1900, with the increase for the decade 1900-1910, and the percentage owned, of all Negro homes in each year.

The number of owned Negro homes increased during the decade 1900-1910 in Georgia by 12,099, or 45.4 per cent; in North Carolina by 11,099, or 38.2 per cent; in Virginia by 10,665, or 23.1 per cent; in Alabama by

10,405, or 44.2 per cent. Very considerable increases are shown in Table 12 for other Southern states, and for a number of Northern and Western states.

The percentage owned increased in all the Southern states except West Virginia, Florida, and Oklahoma. It increased in 19 and remained unchanged or decreased in 13 Northern and Western states. Decrease in the percentage owned does not of course necessarily imply in the case of any state a decrease in the number of owned homes. Although the percentage owned decreased in Oklahoma, for example, from 52.4 in 1900 to 35.3 in 1910, the number of homes owned by Negro

NEGRO POPULATION.

families occupying them increased in this period from 6,039 to 10,018.

The percentage owned in 1910 ranged in the Southern states from 14.7 in Georgia to 41.3 in Virginia, and in the Northern and Western states from 7.8 in New York to 49.6 in Kansas.

Virginia showed the largest absolute increase in owned farm homes (5,078), Georgia the second largest (4,455), and North Carolina the third largest (3,539). Owned farm homes increased in every Southern state, except West Virginia. The number of such homes decreased in 11 Northern states, the decrease amounting to 692 in Missouri, to 227 in Indiana, and to 177 in Kansas.

Owned other homes increased in every state except New Hampshire and Vermont, the increases for this class of homes being generally much larger than for farm homes. In New Jersey, for example, owned farm homes decreased by 25 and owned other homes increased by 1,119; in Indiana, although owned farm homes decreased by 227, owned other homes increased by 748; in Illinois owned farm homes decreased by 25, and owned other homes increased by 1,558. In each of three northern divisions as a whole (Middle Atlantic, East North Central, and West North Central), owned farm homes decreased, and owned other homes increased. In the South Atlantic division as a whole, owned farm homes increased by 16,027, and owned other homes by 32,625; in the East South Central division owned farm homes increased by 8,399 and owned other homes by 19,572; in the West South Central division owned farm homes increased by 6,023 and owned other homes by 20,266.

NEGRO POPULATION PER OWNED HOME.

Negro population per owned Negro home in the South, the North, and the West is shown in Table 8. In the South the Negro population per owned home decreased from 30 in 1890 to 23 in 1900 and to 20 in 1910. In the North, on the average, one owned Negro home was returned in 1910 per 18 Negroes enumerated in the population, and in the West one owned home per 12 Negroes enumerated.

SECTION.	NEGRO POPULATION PER OWNED HOME.		
	1910	1900	1890
United States.....	19	22	28
The South.....	20	23	30
The North.....	18	19	18
The West.....	12	15	18

The number of Negro inhabitants per owned home, and the percentage owned of all Negro homes, are given in Table 9, by divisions and states for the three years 1910, 1900, and 1890. In this table and in Table 12 the figures for 1910 and for 1900 are based upon the number of homes reported owned, no appor-

tionment having been made of the no-report cases. The derived figures for these years as given in Table 9 are, therefore, not entirely comparable with those given for 1890, which are based upon a number of owned homes obtained by apportioning no-report cases in proportion to known cases. The population per owned home as given in Table 9 for 1910 and for 1900 is somewhat in excess of the true figure and the percentage owned somewhat below the true percentage owned.

¹ In 1890 homes for which no report of ownership was received were apportioned as owned or rented in proportion to homes for which reports of ownership were secured. No corresponding apportionment has been made for Negro homes, by states, for the years 1910 and 1900. Such an apportionment, if it had been made, would have resulted in somewhat the population per owned home in 1910 and in 1900, and increased somewhat the percentage owned of Negro homes for these years.

The discrepancies between Table 9 and Tables 6 and 8, in the figures for the country as a whole, showing population per owned home, and percentage owned of Negro homes represent the no-report cases, which are apportioned in Tables 6 and 8. The Negro population per owned home in the United States in 1910, for example, is given in Table 8 as 19 and in Table 9 as 20, and the percentage owned of Negro homes is given in Table 6 as 23.3 and in Table 9 as 22.5.

In the Southern states the Negro population per owned home ranged in 1910 from 13 in Kentucky to 30 in Georgia, the figure for the District of Columbia being 46. In the Northern and Western states the population per owned home ranged from 7 in Nevada to 55 in New York.

URBAN COMMUNITIES.

No complete compilation of data relating to ownership of homes has been made for the aggregate urban and rural Negro population. In Table 10 the number of Negro inhabitants per owned home is shown by divisions and states for the aggregate Negro population of cities having in 1910 a Negro population of 2,500 or more, and this aggregate may be taken as representing with approximate accuracy the condition obtaining in the urban population as a whole.

Generally in the several states of the North the population per owned home is larger in the cities than it is in the population of the state as a whole. More marked differences would develop if comparisons were possible between the aggregate urban and the aggregate rural population of these states. In New York state, for example, it is obvious that the Negro population per owned home, which was 168 for cities reporting in 1910 a Negro population of 2,500 or more, and 55 for the state as a whole including these cities, must have been considerably less than 55 in the rural population of the state. In several Southern states, however, the Negro population per owned Negro home is smaller for aggregate population of the cities than it is for the aggregate population of the state urban and rural combined. In Mississippi, for example, the Negro population per owned home was 15 in the cities and 26 in the state as a whole; in Alabama, 20 in the cities and 27 in the state; and in Georgia, 23 in the cities and 30 in the state.

The number of homes owned free, owned encumbered, and rented by Negro families is given in Table 15 (pp. 471 to 472) for urban communities having a Negro population of 2,500 or more in 1910. Table 16 (p. 473) gives for each of these communities the percentage owned of Negro homes, and Table 17 (p. 474) the Negro inhabitants per owned home.

The lowest percentage owned is that of 2.4 for New York City; the highest that of 67.6 for Marianna, Ark. In 34 of the cities more than one-third of the Negro homes were owned.

The Negro population per owned home in these cities ranged from 7 in Winchester, Ky., to 168 in New York City. In 13 of the cities listed—10 of them southern cities—the Negro population per owned home was less than 10. Birmingham, with a total Negro population of 52,305 and a total of 14,229 Negro families, reported in 1910 one owned Negro home on the average per 22 Negro inhabitants. Bal-

timore, with a total Negro population of 84,749 and a total of 18,106 Negro families, reported one owned home per 91 Negro inhabitants. The 4 other southern cities reporting a Negro population in excess of 50,000 in 1910 reported a Negro population per owned home as follows: Washington, 46; New Orleans, 37; Memphis, 31; and Atlanta, 29.

Richmond, Va., Louisville, Ky., Nashville, Tenn., Savannah, Ga., Charleston, S. C., Jacksonville, Fla., and Norfolk, Va., the 7 cities with Negro populations between 25,000 and 50,000, show an equally wide range in the ratio of owned homes to population. Among these cities Nashville, Tenn., leads, with one owned home for every 18 Negro inhabitants, while Norfolk, Va., shows only one owned home to every 92 of its Negro population—the lowest ratio of owned homes to population shown for any of the southern municipalities presented in this tabulation. The corresponding figures for the remaining cities of this group were as follows: Jacksonville, Fla., 22; Richmond, Va., 28; Charleston, S. C., 37; Savannah, Ga., 53; and Louisville, Ky., 57.

Among southern cities with a Negro population of 10,000 and less than 25,000, Petersburg, Va., leads with one owned home on the average for 13 Negro inhabitants. The corresponding figure for Wilmington, N. C., is 15; for Little Rock, Ark., and Pensacola, Fla., 16; for Lexington, Ky., and San Antonio, Tex., 17; the other cities in this group ranging from 18 in Jackson, Miss., to 52 in Chattanooga, Tenn.

COUNTIES.

Statistics for counties are given in Table 18 (pp. 475 to 501) which gives for each county having in 1910 a Negro population of 100 or more, the Negro population of the county in 1910, the number of Negro homes, and the number of farm homes and of other homes owned free, owned encumbered, and rented. The table represents a special compilation from the census schedules.

AVERAGE SIZE OF FAMILY.

The term "family" as defined for census enumeration means a "group of persons, whether related by blood or not, who live together as one household, usually sharing the same table."

Such a group is not necessarily a natural family, since on the one hand it is not restricted to persons related to one another by blood or marriage, and, on the other hand, does not in any given case necessarily include all such mutually related persons. It may include persons in any degree of blood or marital relationship, together with persons of no natural relationship whatever, such as boarders, or servants. Older sons and daughters living apart from their parents are returned as members of the households or families with which they are living. One person living alone is counted as a family, and, on the other hand, occupants of a hotel or institution, however numerous, are counted each group as forming collectively a single family.

At the census of 1900 the "private family," most of whose members were related to one another by blood or marriage, was distinguished from the "economic family," such as a construction gang or a group of persons occupying a boarding house, hotel, institution, or lumber camp. The average size of all families in 1900 for the United States was 4.7 persons, and of private families 4.6 persons. It appears that economic families were not, in 1900, sufficiently numerous to affect materially the average size of families in the country as a whole or in the states severally. The distinction between private and economic families was not made in the tabulation for 1910.

Table 11 gives the number of families returned at each of the last three censuses, in the total population and in the Negro population.

SECTION AND CENSUS YEAR.	FAMILIES.			PERSONS TO A FAMILY.	
	Total number.	Negro.		Total population.	Negro population.
		Number.	Per cent.		
United States:					
1910.....	20,255,555	2,173,018	10.7	4.5	4.5
1900.....	16,187,715	1,833,759	11.3	4.7	4.8
1890.....	12,690,122	1,410,769	11.1	4.9	5.3
The South:					
1910.....	6,163,207	1,017,391	31.1	4.7	4.6
1900.....	4,878,073	1,637,024	33.2	5.0	4.8
1890.....	3,753,837	1,262,707	33.6	5.3	5.4
The North:					
1910.....	12,507,506	242,920	1.9	4.5	4.2
1900.....	10,318,990	189,770	1.8	4.8	4.6
1890.....	8,310,847	144,937	1.7	4.8	4.9
The West:					
1910.....	1,584,842	12,707	0.8	4.3	4.0
1900.....	830,652	5,965	0.7	4.4	4.4
1890.....	620,418	5,125	0.8	4.9	5.3

Negro families increased from 1,410,769 in 1890 to 2,173,018 in 1910. They constituted, in 1910, 10.7 per cent of the total number of families in the country, the proportion Negro for families being the same as for population. In 1900 the proportion Negro for families was 11.3, and for population 11.6; and in 1890, 11.1 for families, and 11.9 for population.

In the South Negro families constituted at each census approximately one-third of the total number of families, the proportion having decreased somewhat in each decade—from 33.6 per cent in 1890 to 33.2 per cent in 1900, to 31.1 per cent in 1910. The proportions for the North were 1.7, 1.8, and 1.9 per cent, and for the West 0.8, 0.7, and 0.8 per cent.

The average number of persons per Negro family decreased from 5.3 in 1890 to 4.8 in 1900, and to 4.5 in 1910. In 1900 and in 1890 the average size of Negro families somewhat exceeded, and in 1910 precisely equaled the average for families of all classes combined. In each of the three geographic sections considered separately, however, in 1910, the average size of families among Negroes was somewhat below the average for the section as a whole.

In the Negro population, as in the total population, at each of the last three censuses, the average size of families in the South exceeded the average for families in the North and in the West.

HOMES AND FAMILIES.

CHAPTER XIX.—OCCUPATION—EMPLOYMENTS, TRADES, AND PROFESSIONS, BY INDUSTRIAL GROUPS.

THE CLASSIFICATION BY OCCUPATION AND INDUSTRY.

The compilation of the returns of occupation is restricted to the population 10 years of age and over, although some return was entered in the occupational columns of the population schedule for every person enumerated in 1910, the entry in the case of children under 10 years of age being generally "none," although in some cases specific employments were returned for children of this age.

In the case of each person for whom a return was made of occupation, a return was made, also, of the "industry, business, or establishment" in which the person worked.

This double return of occupation by industry provides the data for the detailed tabulation presented in Table 22 (pp. 529 to 551). In this table, for example, the 128,546 Negro males employed by steam railroads are distributed into groups of diverse occupational character, included under such specific designations as officials, station masters, contractors and builders, agents (claim, freight, purchasing, ticket, and station), bookkeepers, stenographers, blacksmiths, cabinetmakers, carpenters, coppersmiths, electricians, engineers (civil, mechanical, stationary, electrical, and locomotive), painters, plumbers, tinners, cooks, gardeners, janitors, molders, motormen, platers and galvanizers, teamsters, upholsterers, and waiters. The full list of occupations specified under "steam railroads," as given in Table 22, comprises every occupation reported by Negro males or females employed by steam railroads in 1910. The list includes, in fact, 90 of the 94 occupational designations shown in the general report of the census, for all employees of steam railways, white and colored, the only occupations specified in the general report for which no Negroes were returned—namely, "designers," "locksmiths," "finishers," and "pattern makers"—being numerically unimportant.

In Tables 17 and 18 (pp. 517 to 522) the industry classification is eliminated, and homogeneous occupational groups are composed, each group comprising all individuals in all industries reporting a given occupation, such as blacksmiths in all industries, or carpenters or plasterers in all industries. Table 17 shows, for example, that 9,727 Negro males were returned in 1910 as blacksmiths. Referring to Table 22 it will be found that 121 of these blacksmiths were employed in coal mines, 3 in copper mines, 19 in iron mines, 53 in quarries, 14 in agricultural implement factories, and varying numbers in other of the 120 industrial and trade groups of Table 22.

The occupational totals of Tables 17 and 18 can not, however, generally be made up completely from the industrial-occupational groups of Table 22, since the full detail of the 428 occupations distinguished in Table 17 for Negro males is not shown for each of the

120 industrial groups of Table 22. Generally the number in any occupation, as given in Table 17, exceeds the sum of the numbers shown separately by industries for this occupation in Table 22, and in the case of a few occupations slight discrepancies arise between these two tables from differences in the classification of small groups of workers. In general, however, it is true that the industrial distribution of each occupational group, designated in Table 17, is shown in detail in Table 22.

PROPORTION GAINFULLY EMPLOYED IN AGRICULTURAL AND IN OTHER PURSUITS: 1910.

Table 1 classifies the Negro population, male and female, 10 years of age and over, in the country as a whole, the South, and the North and West, as gainfully employed and not gainfully employed, and the gainfully employed as employed in agricultural or in other pursuits.

Of the Negro population 10 years of age and over numbering 7,317,922 in 1910, 5,192,535, or 71 per cent, were gainfully employed, and 2,125,387, or 29 per cent, were not gainfully employed. The proportion living in the South of the total Negro population 10 years of age and over was 87.6 per cent; of the gainfully employed, 88.4 per cent; and of the not gainfully employed 85.5 per cent. The proportion male in the total was 49.7 per cent; in the gainfully employed 61.2 per cent; and in the not gainfully employed 21.6 per cent. The proportion living in the South was nearly the same among males as among females, and among the gainfully employed as among those not gainfully employed.

The proportion male in the gainfully employed of the North and West, 66.2 per cent, exceeded somewhat the corresponding proportion of 60.6 per cent for the South; the proportion among those not gainfully employed was much lower than among those gainfully employed, and was practically the same in the North and West as in the South, the percentages being 21.3 and 21.6.

The proportion gainfully employed among both males and females was higher in the South than in the North and West, although the difference in the case of males was inconsiderable. Of Negro females 10 years of age and over, 56 per cent in the South and 45.5 per cent in the North and West were gainfully employed.

Of the 3,178,554 Negro males gainfully employed, 1,842,238 were employed in agricultural and 1,336,316 in nonagricultural pursuits. Of those employed in agricultural pursuits, 1,795,610 were in the South and 46,628 in the North and West.

Of the 2,013,981 Negro females gainfully employed, 1,051,137 were employed in agricultural and 962,844 in nonagricultural pursuits. Of those employed in agricultural pursuits, 1,049,553 were living in the South and 1,584 in the North and West.

The North and West.....	100.0	85.8	10.1	75.7	14.2
Female:					
United States.....	100.0	54.7	28.5	26.2	45.3
The South.....	100.0	56.0	32.4	23.5	44.0
The North and West.....	100.0	45.3	0.4	45.1	54.5

Of the males employed in agricultural pursuits, 97.5 per cent, and of the females, 99.8 per cent were living in the South. Among those employed in nonagricultural pursuits, 73.8 per cent of the males and 79.1 per cent of the females were living in the South.

Of the male Negro population 10 years of age and over in the South, 56.6 per cent were engaged in agricultural and 31.1 per cent in nonagricultural pursuits, the percentages for females being 32.4 and 23.5.

In the North and West 75.7 per cent of the Negro males and 45.1 per cent of the Negro females were engaged in nonagricultural pursuits; the proportion engaged in agricultural pursuits being 10.1 per cent for

males and 0.4 per cent for females, and the proportion not gainfully employed 14.2 per cent for males and 54.5 per cent for females.

COMPARISON OF NEGROES WITH WHITES.

In Table 2 the Negro and white population 10 years of age and over, male and female, in the country as a whole is classified as gainfully employed in agricultural and in nonagricultural pursuits, and as not gainfully employed.

NEGRO POPULATION.

Of the gainfully employed population, 61.2 per cent of the Negroes and 81.6 per cent of the whites were males. Of those not gainfully employed, 21.6 per cent of the Negroes and 20.6 per cent of the whites were males.

Of the gainfully employed male population, 10.6 per cent were Negroes and 88.8 per cent were whites. Of the male population not gainfully employed, 6.6 per cent were Negroes and 92.8 per cent were whites. Of the gainfully employed females, 24.9 per cent were Negroes and 74.8 per cent were whites, and of the not gainfully employed females, 6.3 per cent were Negroes and 93.4 per cent were whites.

The proportion gainfully employed in the male population 10 years of age and over was 87.4 per cent for Negroes and 80.6 per cent for whites. In the female population the corresponding proportion was 54.7 per cent for Negroes and 19.6 per cent for whites, the proportion gainfully employed among Negro females being markedly higher than among white females.

COMPARISON OF 1910 WITH 1900 AND 1890.

The occupational classification of the Thirteenth Census differs materially from that of preceding censuses, and in making comparisons of 1910 with earlier years it is necessary to recompile the 1910 data, so as to create comparable occupational groups. This has

been done in Table 20 (pp. 526 to 527), which classifies Negroes 10 years of age and over gainfully employed in 1910, 1900, and 1890, by sex and occupation, according to the 1900 scheme of occupational classification.

In the Negro population both male and female the proportion gainfully employed increased in each of the last two decades, among males from 79.4 per cent in 1890 to 84.1 per cent in 1900, and to 87.4 per cent in 1910; and among females from 36.2 per cent in 1890 to 40.7 per cent in 1900, and to 54.7 per cent in 1910.

During this period the proportion engaged in agricultural pursuits, as defined by the 1900 classification, remained practically unchanged among Negro males, the percentage in such pursuits being 49.2 in 1890, 49.1 in 1900, and 50.3 in 1910. Among females the proportion engaged in agricultural pursuits increased from 15.9 per cent in 1890 to 18 per cent in 1900, and to 28.6 per cent in 1910. In the same period the proportion of Negro females engaged in nonagricultural pursuits increased from 20.3 per cent in 1890 to 22.7 per cent in 1900 and to 26.2 in 1910; and the proportion not gainfully employed among Negro females 10 years of age and over declined from 63.8 per cent in 1890 to 59.3 per cent in 1900 and to 45.3 per cent in 1910. Table 3 summarizes the general changes which took place during the two decades 1890-1900 and 1900-1910, as regards the gainful employment of Negro males and females.

GAINFULLY EMPLOYED IN AGRICULTURAL AND IN OTHER PURSUITS, AND NOT GAINFULLY EMPLOYED—NUMBER AND PERCENTAGE OF NEGRO MALES AND FEMALES: 1910, 1900, AND 1890.

AGRICULTURAL PURSUITS.

It will be obvious from the preceding tables that agricultural pursuits as a group constitute in the case of Negroes as in the case of whites a field of gainful employment of preeminent importance. At each of the three censuses, as shown in Table 3, approximately one-half of the total male Negro population 10 years of age and over were returned on the population sched-

ule as engaged in some form of agricultural employment, the proportion of white males so employed in 1910 being, as is shown in Table 2, 26.9 per cent. More than one-quarter of the Negro females 10 years of age and over in 1910 reported some form of agricultural employment, the corresponding proportion for whites being 2.4 per cent. Of the Negro females gainfully employed more than one-half were returned as engaged in agricultural employment, and nearly

one-half—967,837 out of 2,013,981 (see Table 19)—of the total Negro females gainfully employed were returned as "farm laborers."

Table 4 distributes the Negro and white male and female population employed in agriculture in 1910, as engaged in general farming, or in specified lines of agriculture, such as gardening, dairy farming, and fruit growing.

Of the 1,842,238 Negro males reporting agricultural employment in 1910, 1,757,509, or 95.4 per cent, were employed on general farms, the corresponding proportion for white males being 92.5 per cent. Of Negro females employed in agriculture, 99.6 per cent were employed in general farming, the proportion for white females being 96.9 per cent.

Of Negro males in agriculture, 24,345 were engaged in turpentine farming, 15,857 in gardening, 2,490 in dairy farming, and 1,925 in fruit growing. It will be apparent that the several special lines of agricultural employment designated in Table 4 are, as regards numbers employed, relatively insignificant when comparison is made with general farming. None of these lines, except turpentine farming, represents more than a fraction of 1 per cent of Negro males employed in agriculture.

¹ Less than one-tenth of 1 per cent.

In Tables 5 and 6 Negro and white males and females employed in agricultural pursuits are classified as operators, foremen, and laborers. The full detail of agricultural pursuits is given in Table 16, by states, for Negro males and females in 1910.

The term "operator" embraces all owners, tenants, renters, and croppers; the term "foreman," all persons managing farms for wages or salaries; and the term "laborer" all other persons working on farms. The number of operators corresponds approximately to the number of farms, for which farm schedules were returned in 1910, and for which data are presented in the succeeding chapter on agriculture. By reference to Table 1 of the chapter on agriculture (p. 553) it will be found that the number of farms operated by Negro farmers in 1910 was 893,370. The number of Negro operators, male and female, as shown in Table 5, is 853,733, or 9,637 less than the number of farms operated by Negroes. The discrepancy is accounted for in part by the fact that some farms are operated by Negro managers, classified in Table 5 as "foremen" and by the further fact that some Negro farmers operate more than one farm.

¹ Includes foresters, forestry owners and managers, apiarists, poultry raisers, stock raisers, and landscape gardeners.

² Includes forestry foreman and stock farm foreman.
³ Includes corn shellers, grain threshers, wood sawyers, etc.; ditchers; hay and straw balers; irrigators and ditch tenders; choppers and cutters in lumber camps; inspectors and surveyors; log drivers; sawyers; scalers; teamsters; woodchoppers and tie cutters; fishermen and oystermen; poultry yard laborers; stock herders, drovers, and feeders; gardeners employed by steam railroads; and not specified pursuits.

NEGRO POPULATION.

In Table 5 these classes are shown for each of the special lines of agricultural employment designated in Table 4. Table 5 shows, for example, that of the 1,757,509 Negro males employed in general farming 798,397 were returned as farm operators or farmers, 1,277 as farm foremen or managers, and 957,835 as farm laborers. A similar classification is made for each of the other groups, by sex, and for both Negroes and whites.

In Table 6 the classes of workers for other agricultural employment than general farming have been combined, and are shown in the aggregate in comparison with the numbers for general farming.

Of the total number of Negro males employed in general farming, 45.4 per cent were operators or farmers, 0.1 per cent were foremen or managers, and 54.5 per cent were laborers, the corresponding proportions for whites being 56.5, 0.5, and 43 per cent.

FARM LABORERS ON HOME FARMS AND WORKING OUT: 1910.

Farm laborers are classified in Table 7 as working on "home farms" and "working out." Of the 957,835 Negro male agricultural laborers, 441,203 were employed on home farms in 1910, and 516,632 were working away from the home farm. These two groups constitute in the aggregate 92.4 per cent of the total number of Negro agricultural laborers. Laborers working on home farms constituted 42.6 per cent of all agricultural laborers, and laborers working out 49.8 per cent, the corresponding proportions for white males being 43.9 and 45.6 per cent. Of the Negro female agricultural laborers, 72.5 per cent were working on the home farm, and 27.1 per cent were working out. The proportion working out is much lower in the case of females than in the case of males, and is higher in the case of Negro than of white females.

EMPLOYMENT IN AGRICULTURAL PURSUITS: 1910, 1900, AND 1890.

Table 8 is in part reproduced from Table 20, in which the 1910 data relating to occupations have been compiled according to the occupational classification of 1900. In this table the number of Negro males and females engaged in specific agricultural pursuits is shown for the years 1910, 1900, and 1890, with the increases for each of the two decades 1900-1910 and 1890-1900.

The number of "farmers, planters, and overseers" among Negro males increased from 541,300 in 1890 to 799,923 in 1910, the increase in the decade 1890-1900 amounting to 144,857, and in the decade 1900-

1910 to 113,766. Agricultural laborers in the same period among Negro males increased from 729,197 in 1890, to 973,695 in 1910, the decennial increases being 105,241 and 139,257.

¹ A minus sign (-) denotes decrease.

A striking figure in Table 8 is the increase during the decade 1900-1910 in the number of farm laborers among Negro females. This increase, from 509,687 in 1900 to 970,660 in 1910, amounted to 460,373, and was more than three times the corresponding increase for males. In commenting upon the increase during this decade in the number of women gainfully employed, the 1910 Occupations report recites the following two paragraphs from instructions to enumerators in 1910. It is stated that these instructions "may have resulted in the enumerators returning occupations for women who would not have been considered gainful workers by the Twelfth Census enumerators working under different instructions," and "may have had much to do with the numerous increase between 1900 and 1910 in the number of females returned in agricultural pursuits."

14. Column 18. *Trade or profession.*—An entry should be made in this column for every person enumerated. The occupation, if any, followed by a child of any age, or by a woman, is just as important, for census purposes, as the occupation followed by a man. Therefore it must never be taken for granted, without inquiry, that a woman or child has no occupation.

15. *Women doing farm work.*—A woman working regularly at outdoor farm work, even though she works on the home farm for her husband, son, or other relative and does not receive money wages, should be returned in column 18 as a *farm laborer*. Distinguish, however, such women who work on the home farm from those who work away from home, by writing in column 19 either *home farm or working out*, as the case may require. Of course,

a woman who herself operates or runs a farm should be reported as a *farmer*, and not as a *farm laborer*.

The corresponding instructions in 1900 were as follows:

154. Column 19. *Occupation.*—This question applies to every person 10 years of age and over who is at work—that is, occupied in gainful labor—and calls for the profession, trade, or branch of work upon which each person depends chiefly for support, or in which he is engaged ordinarily during the larger part of the time. (See par. 223.)

160. If a married woman has a gainful occupation, return the occupation accordingly, whether she does the work at her home or goes regularly to a place of employment, and whether she is regularly or only occasionally so employed. For example, "milliner," "dressmaker," "nurse," etc.

161. In farming sections, where a farm is found that is under the management or supervision of a woman as owner or tenant, return the occupation of such woman as "farmer" in all cases.

It seems probable that a large proportion of the increase in the gainful, and specifically in the agricultural, employment of Negro as of white women in the decade 1900-1910, is to be attributed directly to the fact that instructions to enumerators in 1910 were, as regards women, more specific and comprehensive. While, as is pointed out in the Occupations report, the increase in female farm laborers was general, numerically a large proportion of it was, in fact, "confined to the South, to the Negroes, and to children 10 to 15 years of age." It is remarked further that "the figures indicate that a large proportion of the adult Negro males working on the home farm were returned as 'farmers,' while most of the adult Negro females working on the home farm were returned as 'farm laborers.'" (Thirteenth Census, Vol. IV, p. 27.)

AGRICULTURAL EMPLOYMENT IN THE SOUTH, THE NORTH, AND THE WEST: 1910 AND 1900.

In Table 9 the number of "farmers, planters, and overseers," "farm laborers, home farms," and "farm laborers working out" among Negro males and females is shown by sections and southern divisions for the two years 1910 and 1900. In this table, as in Table 8, the compilation is according to the 1900 occupational scheme.

The number of Negro male farmers, planters, and overseers increased in the South from 672,355 in 1900 to 788,393 in 1910, or 116,038; in the North this class of workers decreased from 13,517 in 1900 to 11,082 in 1910; and in the West increased in the same period from 285 to 448. In this decade the number of Negro male farm laborers working on home farms in the South increased from 358,607 to 437,882, or 79,275, and the number working out from 442,670 to 490,887, or 48,217. It will be apparent from Table 9 that the increase in these several classes of workers during the decade 1900-1910 was practically confined to the South, and that in the South it was widely distributed, each southern division showing increases in the number of farmers and farm laborers, male and female.

The North.....	444	589	(1)	(1)
The West.....	(1)	(1)	(1)	(1)

¹ Number of farm laborers working out, less than 1,000.

Among Negro males in the South in both years the number returned as farmers, planters, and overseers greatly exceeded the number returned as farm laborers working out, the ratio of these classes to one another in 1910 being as 1,606 to 1,000. In the North among males the number of farm laborers working out per 1,000 farmers, planters, and overseers was 444, and

among females in the South it was 301. It is noted in the Occupations report for 1910 that adult Negro male laborers working on farms were returned as farmers in some cases where, if correctly classified, they would have been returned as farm laborers, and that Negro women and girls on farms were more apt to be returned as gainfully employed than were white women and girls similarly occupied, and when so returned were generally classified as farm laborers.

NONAGRICULTURAL EMPLOYMENTS.

The principal nonagricultural occupations of Negro males and females are listed in Table 11, in the order of their numerical importance, the occupations shown being those for which data are given by states for males in Table 17 (pp. 570 to 520), and for females in Table 18 (pp. 521 to 522). In these tables each occupation is listed in which in 1910 at least 2,000 Negro males or females were returned in the United States as a whole. These occupations have been selected from the full list of occupations designated in Table 19, on the basis simply of number of workers.

More than one-third of the total number of Negro women returned as gainfully employed in 1910 were returned in two occupational groups, as either "servants" or "laundresses not in laundries," and for both males and females not employed in agriculture some form of unskilled or semiskilled labor in the various lines of service, trade, and industry was returned in a large majority of cases as the gainful employment. Skilled trades, such as molders, plumbers, machinists, chauffeurs, painters, blacksmiths, masons, barbers, and carpenters, are, however, represented in each case by some thousands of workers, as are also such professional groups as physicians and surgeons, trained nurses, and teachers. In general, employment for males is much more diversified than for females.

INDUSTRIAL AND TRADE GROUPING OF GAINFULLY EMPLOYED WORKERS.

In Table 12 males and females returned in 1910 as gainfully employed are classified by industries and trades, without distinction by occupation.

The table shows, for example, that of the 669,921 males working in coal mines in 1910, 40,584 were Negroes, and of the 890 females 39 were Negroes. The specific occupations of these workers are given in Table 22 (p. 529), which shows that the 40,584 Negro males included 28,976 miners, 7,649 laborers, 1,580 drivers, 324 firemen, 290 door tenders, 182 engineers, 157 machinists, 121 blacksmiths, 116 bosses, foremen, or overseers, 107 cutters, and approximately 1,000 workers distributed to other employments, of which 32 are designated.

Workers in coal mines constitute 1 of 120 industrial, trade, or service groups for which totals are given in Table 12, and occupational detail in Table 22.

PROFESSIONAL SERVICE GROUPS.

The number of Negroes and of whites engaged in specified professional services in 1910 is given in Table 13, together with the population, Negro and white, per person in each specified professional service group.

Relatively to population, the number engaged in professional service in 1910 among whites greatly exceeded the number so engaged among Negroes. Among Negroes the average population per professional person was 146, and among whites 51.

Relatively to population clergymen were more numerous among Negroes than among whites, the population per clergyman being 562 among Negroes, and 815 among whites. Each other profession was relatively to population more numerous among whites than among Negroes, and in a large majority of cases the excess of the ratio of population to professional workers among Negroes over the corresponding ratio among whites was very great.

The population per physician or surgeon, for example, was 3,194 among Negroes, and 553 among whites; per dentist, 20,560 among Negroes, and 2,070

NEGRO POPULATION.

GENERAL TABLES.

Table 15, below, gives, by divisions and states, the number of Negro males and females 10 years of age and over, with the number and percentage gainfully employed in 1910.

Table 16 (pp. 513 to 516) shows detail of agricultural employment, by states, for Negro males and females in 1910.

Table 17 (pp. 517 to 520) gives, by states, the number of Negro males in each occupation in which an aggregate in the country as a whole of at least 2,000 Negro males were employed in 1910, and Table 18 (pp. 521 to 522), gives similar data for Negro females.

Table 19 (pp. 523 to 525) classifies Negro males and females 10 years of age and over in 1910, by 428 occupational groups.

Table 20 (pp. 526 to 527) classifies Negro males and

females in 1910, 1900, and 1890, according to the occupational scheme of 1900.

Table 21 (p. 528) gives, by states, the number of farmers, planters, and overseers of farm laborers on home farms, and of farm laborers working out, for Negro males and females in 1910 and 1900.

Table 22 (pp. 529 to 551) gives for all classes and for Negroes, by sex, occupational detail for 120 industry, trade, and service groups in 1910. For all occupations except those of agriculture, animal husbandry, and forestry, this is the most detailed tabulation made. Several thousand occupational groups being distinguished by sex, industry, and employment. This detail obviously could not advantageously be extended to classifications for the several states. It provides full detail for any analyses and compilations of Negro employment that may be required in special investigations.

Farmers.....	2,721	1,502	1,199	Glass blowers.....	42	41	1
Farm laborers (home farm).....	877,818	708,509	79,309	Jewelers, watchmakers, goldsmiths, and silversmiths.....	157	153	4
Farm laborers (working out).....	1,949,739	981,922	967,817	Goldsmiths and silversmiths.....	37	36	1
Turpentine farm laborers.....	1,145,533	441,233	704,300	Jewelers and lapidaries (factory).....	19	18	1
Farm foremen.....	780,035	516,832	263,203	Jewelers and watchmakers (not in factory).....	101	99	2
Garden and greenhouse foremen.....	24,371	24,087	284	Laborers (not otherwise specified):			
Dairy farm foremen.....	1,828	1,543	285	Building and hand trades.....	172,548	166,374	6,174
Garden and greenhouse foremen.....	15	13	1	General and not specified laborers.....	157,057	151,394	5,663
Orchard, nursery, etc., foremen.....	1,692	1,423	269	Helpers in building and hand trades.....	14,891	14,880	11
Fishermen and oystermen.....	72	61	11	Chemical industries.....	9,139	9,044	95
Foresters.....	49	45	4	Fertilizer factories.....	7,092	6,984	108
Gardeners, florists, fruit growers, and nurserymen.....	8,298	8,160	108	Paint factories.....	126	126	
Florists.....	5,117	4,638	307	Powder, cartridge, fireworks, etc., factories.....	19	19	
Fruit growers and nurserymen.....	116	96	20	Other chemical factories.....	1,931	1,917	14
Gardeners.....	335	303	32	Clay, glass, and stone industries.....	22,523	22,387	166
Landscape gardeners.....	4,096	3,909	457	Brick, tile, and terra-cotta factories.....	15,891	15,792	99
Garden, greenhouse, orchard, and nursery laborers.....	18,011	15,562	2,449	Glass factories.....	1,704	1,668	38
Cranberry and nut laborers.....	13,825	11,801	2,024	Lime, cement, and gypsum factories.....	3,850	3,828	22
Greenhouse laborers.....	771	729	42	Marble and stone yards.....	737	731	6
Orchard and nursery laborers.....	25,296	25,262	34	Potteries.....	341	340	1
Lumbermen, raftsmen, and woodchoppers.....	111	111		Iron and steel industries.....	31,307	31,112	195
Foremen and overseers.....	18,921	14,053	16	Automobile factories.....	183	180	3
Overers and managers of log and timber camps.....	2,465	2,465		Elastic machines and rolling mills.....	13,326	13,319	7
Teamsters and haulers.....	8,699	8,681	18	Car and railroad shops.....	3,664	3,645	19
Woodchoppers and tie cutters.....	1,261	1,105	156	Wagon and carriage factories.....	861	855	6
Others and managers of log and timber camps.....	1,387	1,366	21	Other iron and steel works.....	12,896	12,843	53
Stock raisers, drovers, and feeders.....	202	187	15	Other metal industries.....	115	114	1
Stock raisers.....	2,518	2,401	117	Copper factories.....	92	92	
Other agricultural and animal husbandry pursuits.....	24	23	1	Lead and zinc factories.....	315	315	
Aparitists.....	1,761	96	96	Tinware and enamel-ware factories.....	236	228	8
Corn shellers, hay balers, grain thrashers, etc.....	96	96		Other metal factories.....	68	66	2
Ditchers.....	1,979	1,781	198	Lumber and furniture industries.....	98,056	97,115	941
Poultry raisers and poultry yard laborers.....	368	291	67	Furniture, piano, and organ factories.....	1,462	1,449	13
Other and not specified pursuits.....	279	270	9	Saw and planing mills.....	91,887	91,181	706
EXTRACTION OF MINERALS.				Clothing industries.....	4,705	4,485	220
Foremen, overseers, and inspectors.....	61,129	61,048	81	Textile industries.....	5,871	5,284	587
Foremen and overseers.....	200	200		Cotton mills.....	4,063	4,256	407
Inspectors.....	190	190		Silk mills.....	67	67	
Operators, officials, and managers.....	146	146		Woolen and worsted mills.....	148	129	19
Managers.....	17	17		Other textile mills.....	935	832	103
Officials.....	126	126		Other industries.....	55,388	51,326	4,574
Coal mine operatives.....	39,567	39,530	37	Charcoal and coke works.....	2,903	2,895	8
Copper mine operatives.....	289	289		Cigar and tobacco factories.....	8,173	5,768	2,405
Gold and silver mine operatives.....	256	254	2	Clothing industries.....	3,405	359	43
Iron mine operatives.....	5,235	5,276	41	Electric light and power.....	1,143	1,138	5
Copper mine operators.....	5,067	5,052	15	Food supply factories.....	145	145	
Lead and zinc mine operatives.....	259	259		Bakeries.....	400	375	25
All other mine operatives.....	4,808	4,793	15	Butter and cheese factories.....	88	87	1
Quarry operatives.....	9,953	9,938	15	Fish curing and packing.....	271	228	43
Oil, gas, and salt well operatives.....	403	400	3	Flour and grain mills.....	1,058	1,038	20
Oil and gas well operatives.....	215	214	1	Fruit and vegetable canning, etc.....	178	133	45
Salt well and works operatives.....	188	186	2	Sugar factories and refineries.....	3,080	2,963	117
MANUFACTURING AND MECHANICAL INDUSTRIES.				Other food factories.....	392	584	8
Apprentices.....	631,377	563,410	67,967	Gas works.....	1,963	1,392	571
Apprentices to building and hand trades.....	1,854	1,396	258	Liquor and beverage industries.....	1,671	1,668	3
Dressmakers' and milliners' apprentices.....	833	832	1	Oil refineries.....	1,384	1,355	29
Other apprentices.....	225	225		Paper and pulp mills.....	905	902	4
Bakers.....	776	744	32	Printing and publishing.....	805	772	33
Blacksmiths, forgers, and hammermen.....	2,125	1,928	197	Rubber factories.....	683	663	20
Blacksmiths.....	9,837	9,834	3	Shoe factories.....	93	92	1
Forgemen, hammermen, and welders.....	9,780	9,727	53	Turpentine stilleries.....	178	171	7
Boiler makers.....	475	475		Other factories.....	1,529	1,498	31
Brick and stone masons.....	12,403	12,401	2	Loom factories.....	5,870	5,870	
Builders and building contractors.....	3,225	3,272	21	Machinists, millwrights, and toolmakers.....	22,483	21,378	1,105
Butchers and dressers (slaughterhouse).....	1,099	1,099		Machinists and millwrights.....	3,323	3,322	1
Cabinet makers.....	293	292	1	Toolmakers and diesetters and sinkers.....	27	26	1
Carpenters.....	30,468	30,464	4	Manufacturers and subcontractors (manufacturing).....	217	217	
Compositors, linotypers, and typesetters.....	1,141	960	151	Manufacturers and officials.....	1,760	1,708	52
Coopers.....	2,305	2,304	1	Manufacturers.....	1,727	1,677	50
Dressmakers and milliners (not in factory).....	219	219		Mechanics (not otherwise specified).....	752	752	
Dyers.....	255	236	19	Gunsmiths, locksmiths, and bellhangers.....	38	38	
Electricians and electrical engineers.....	703	703		Washers.....	90	90	
Electrotypers, stereotypers, and lithographers.....	41	40	1	Other mechanics.....	624	624	
Electrotypers and stereotypers.....	21	21		Millers (grain, flour, feed, etc.).....	383	382	1
Lithographers.....	20	19	1	Milliners and millinery dealers (manuf.).....	991	98	953
Engineers (mechanical).....	55	55		Molders, founders, and casters (manufacturing).....	2,221	2,221	
Engineers (stationary).....	4,802	4,802		Brass molders, founders, and casters.....	55	55	
Enginers.....	33	29	4	Iron molders, founders, and casters.....	2,166	2,156	10
Painters, glaziers, buff and polishers (metal).....	441	434	7	Other molders, founders, and casters.....	19	19	
Painters, glaziers, and polishers (building).....	219	213	6	Oilers of machinery.....	416	416	
Painters, glaziers, and varnishers (building).....	8,040	8,034	6	Painters, glaziers, varnishers, enamellers, etc.....	8,927	8,915	12
Painters, glaziers, and varnishers (factory).....	863	856	7	Conners, lacers, and japanners.....	24	24	
Paper hangers.....	83	83		Painters, glaziers, and varnishers (factory).....	863	856	7
Pattern and model makers.....	60	60		Pattern and model makers.....	83	84	1
Plasterers.....	6,173	6,175	2	Plasterers.....	6,173	6,175	2
Foremen (except hoppers and fire department).....	147	147		Other molders, founders, and casters.....	2,285	2,285	
Foremen and overseers (manufacturing).....	1,596	1,548	48	Pressmen (printing).....	132	132	

1 Includes turpentine farmers. 2 Includes turpentine farm foremen. 3 Includes tin-plate mills. 4 Includes wooden-box factories.

NEGRO POPULATION.

TABLE 19.—NEGROES 10 YEARS OF AGE AND OVER ENGAGED IN EACH SPECIFIED OCCUPATION, BY SEX: 1910—Contd.

OCCUPATION.	Total.	Male.	Female.	OCCUPATION.	Total.	Male.	Female.
MANUFACTURING AND MECHANICAL INDUSTRIES—Continued.				MANUFACTURING AND MECHANICAL INDUSTRIES—Continued.			
Rollers and roll hands (metal).....	322	322	Semiskilled operatives—Continued.			
Roofers and slaters.....	613	613	Other industries.....	6,969	6,101	868
Sawyers.....	3,152	3,151	1	Electrical supply factories.....	42	47	5
Semiskilled operatives (not otherwise specified):				Paper-box factories.....	49	30	19
Chemical industries.....	764	722	42	Rubber factories.....	85	37	48
Paint factories.....	69	68	1	Other factories.....	6,793	5,955	838
Powder, cartridge, fireworks, etc., factories.....	20	20	Sewers and sewing-machine operators (factory)¹.....	1,924	679	1,245
Other chemical factories.....	675	634	41	Shoemakers and cobblers (not in factory).....	3,739	3,665	44
Cigar and tobacco factories.....	16,306	8,039	8,267	Wood carvers.....	14	14
Clay, glass, and stone industries.....	2,544	2,489	55	Annearers and temperers (metal).....	20	20
Brick, tile, and terra-cotta factories.....	1,027	1,018	9	Piano and organ tuners.....	30	30
Glass factories.....	561	524	37	Structural-iron workers (building).....	90	90
Lime, cement, and gypsum factories.....	496	494	2	Other skilled occupations.....	29	29
Marble and stone yards.....	341	336	5	Stonecutters.....	500	500
Potteries.....	89	87	2	Tailors and tailoresses.....	115	4,652	301
Clothing industries.....	2,910	2,389	521	Tinmiths and coppermiths.....	884	15	1
Hats, fur, and millinery.....	64	59	5	Coppersmiths.....	15	15
Suit, coat, cloak, and overalls factories.....	2,231	1,998	233	Tinmiths.....	869	868	1
Other clothing factories.....	615	332	283	Upholsterers.....	809	784	25
Food industries.....	3,833	2,391	1,442				
Bakeries.....	147	124	23	TRANSPORTATION²	255,969	254,683	1,286
Butter and cheese factories.....	29	24	5	Water transportation (selected occupations):			
Candy factories.....	430	387	43	Boatmen, canalmen, and lock keepers.....	260	260
Flour and grain mills.....	240	230	10	Captains, masters, mates, and pilots.....	463	465
Fruit and vegetable canning, etc.....	131	52	79	Longshoremen and stevedores.....	16,468	16,379	26
Slaughter and packing houses.....	391	343	48	Sailors and deck hands.....	6,508	6,503	5
Other food factories.....	2,385	1,231	1,154	Road and street transportation (selected occupations):			
Harness and saddle industries.....	277	270	7	Carriage and hack drivers.....	7,878	7,871	7
Iron and steel industries.....	6,064	5,983	81	Chauffeurs.....	4,676	4,674	2
Automobile factories.....	60	58	2	Drivers, teamsters, and expressmen³.....	50,711	50,689	22
Blast furnaces and rolling mills¹.....	1,813	1,804	9	Foremen of livery and transfer companies.....	426	426
Car and railroad shops².....	603	656	53	Garage keepers and managers.....	12,967	12,965	2
Wagon and carriage factories.....	202	192	10	Hacklers and stable hands.....	4	3	1
Other iron and steel works.....	3,354	3,271	83	Livery-stable keepers and managers.....	4	395	8
Other metal industries.....	93	80	13	Proprietors and managers of transfer companies.....	61	63	15
Clock and watch factories.....	10	10	Railroad transportation (selected occupations):	252	242
Gold and silver and jewelry factories.....	37	27	10	Baggage men and freight agents.....	242	242
Lead and zinc factories.....	11	11	Bellmen.....	225	225
Tinware and enamel-ware factories.....	133	107	26	Freight agents.....	17	17
Other metal factories.....	26	23	3	Rigger washers and engine hostlers.....	1,368	1,368
Liquor and beverage industries.....	47	43	4	Brakemen.....	4,719	4,719
Breweries.....	67	65	2	Conductors (steam railroad).....	120	120
Distilleries.....	65	61	4	Foremen and overseers.....	44	44
Other liquor and beverage factories.....	329	319	10	Laborers.....	987	982	5
Lumber and furniture industries.....	11,941	11,473	468	Steam railroad.....	120,560	89,721	839
Furniture, piano, and organ factories.....	1,212	1,094	118	Street railroad.....	37,158	86,350	808
Saw and planing mills¹.....	9,322	9,201	121	Foremen and overseers.....	3,372	3,341	31
Other woodworking factories.....	1,407	1,178	229	Locomotive engineers.....	355	355
Paper and pulp mills.....	203	163	40	Locomotive firemen.....	5,168	4,988	168
Printing and publishing.....	471	313	158	Motormen.....	39	39
Shoe factories.....	2,485	2,318	167	Officials and superintendents.....	39	39
Tanneries.....	596	591	5	Steam railroad.....	37	37
Textile industries.....				Switchmen, flagmen, and yardmen.....	2,471	2,469	2
Beavers, wipers, and slathers.....	25	13	12	Switchmen and flagmen (steam railroad).....	2,127	2,125	2
Cotton mills.....	13	10	3	Switchmen and flagmen (street railroad).....	31	31
Silk mills.....	8	1	7	Yardmen (steam railroad).....	33	33
Woolen and worsted mills.....	1	1	Ticket and station agents.....	50	44	6
Other textile mills.....	3	2	1	Express, post, telegraph, and telephone (selected occupations):			
Bobbin boys, doffers, and carriers.....	62	48	14	Agents (express companies).....	12	12
Cotton mills.....	48	39	9	Express messengers and railway mail clerks.....	796	796
Silk mills.....	4	1	3	Express messengers.....	94	94
Woolen and worsted mills.....	1	1	Railway mail clerks.....	762	762
Carriers, combers, and lappers.....	140	123	17	Mail carriers.....	2,781	2,756	25
Cotton mills.....	102	81	21	Telegraph and telephone linemen.....	488	488
Silk mills.....	7	7	Telegraph messengers.....	263	262	1
Woolen and worsted mills.....	2	2	Telegraph operators.....	73	67	6
Drawers, rovers, and twistors.....	113	74	39	Telephone operators.....	289	197	192
Cotton mills.....	81	59	22	Other transportation (selected occupations):			
Silk mills.....	11	2	9	Foremen and overseers (not otherwise specified).....	246	246
Woolen and worsted mills.....	4	4	Road and street building and repairing.....	97	97
Spinners.....	169	73	96	Telegraph and telephone companies.....	5	5
Cotton mills.....	110	43	67	Water transportation.....	137	137
Silk mills.....	9	1	8	Other transportation.....	7	7
Woolen and worsted mills.....	15	15	Inspectors.....	190	186	4
Other textile mills.....	35	19	16	Steam railroad.....	178	175	3
Weavers.....	339	162	177	Street railroad.....	18	6	12
Cotton mills.....	250	103	147	Other transportation.....	6	5	1
Silk mills.....	75	2	73	Laborers (not otherwise specified).....	40,626	40,489	137
Woolen and worsted mills.....	14	4	10	Road and street building and repairing.....	33,914	33,904	10
Other textile mills.....	103	63	40	Street cleaning.....	5,099	5,099
Winders, reelers, and spoolers.....	150	35	115	Street cleaning (semiskilled).....	5,703	5,066	137
Cotton mills.....	44	12	32	Other transportation.....	5	5
Silk mills.....	6	40	34	Proprietors, officials, and managers (not otherwise specified).....	5	5
Woolen and worsted mills.....	3	3	Telegraph and telephone companies.....	5	5
Other textile mills.....	23	17	6	Other transportation.....	2,532	2,480	72
Other occupations.....	2,540	1,563	933	Steam railroad.....	2,007	1,960	47
Cotton mills.....	1,039	744	286	Street railroad.....	123	123
Silk mills.....	195	60	135	Other transportation.....	402	400	22
Woolen and worsted mills.....	88	89	19				
Other textile mills.....	1,187	603	494				

¹ Includes tin-plate mills.

² Includes car repairers for street and steam railroads.

³ Includes wooden-box factories.

⁴ Includes sewers and sewing-machine operators in all factories except shoe and harness factories, and sack sewers in cement, sugar, and grain mills.

⁵ Does not include the 15,116 porters, the 2,396 waiters, and the 2,943 cooks employed by steam railroads; or the 1,247 porters, the 650 waiters, and the 1,537 cooks employed by other transportation companies. These 23 workers reported on page 525, under "Domestic and personal service."

⁶ Teamsters in agriculture, forestry, and the extraction of minerals are classified with the other workers in those industries, respectively, and drivers for bakeries and laundries are classified with deliverymen in trade.

OCCUPATION.

TABLE 19.—NEGROES 10 YEARS OF AGE AND OVER ENGAGED IN EACH SPECIFIED OCCUPATION, BY SEX: 1910.—Contd.

OCCUPATION.	Total.	Male.	Female.	OCCUPATION.	Total.	Male.	Female.

CHAPTER XX.—AGRICULTURE—ACREAGE OF FARMS; VALUE OF FARM PROPERTY; LIVE STOCK; CROPS; TERM OF OCCUPANCY; MORTGAGE INDEBTEDNESS; AND TENURE CLASSES.

SCHEME OF PRESENTATION.

As compiled for farms and for tenure classes of farms in this chapter, statistics of agriculture relate to the following topics: Number of farms; farm acreage, improved and unimproved; value of farm property, including land, buildings, implements and machinery, and live stock; farm animals; crops; size of farms; term of occupancy; and mortgage indebtedness.

Summary tables relating to each of these topics, with two exceptions, are presented in Section I for farms without distinction by tenure, and in Section II for tenure classes of farms. Size of farms is shown without distinction by tenure in Section I, but is not shown by tenure in Section II; and mortgage indebtedness is shown for owned farms only. Tables 45 to 73 are general tables for states and counties, from which the summary tables of Sections I and II are, with few exceptions, derived.

Under this arrangement statistics in greater or less detail relating to any of the topics noted above will generally be found in each section and in the General Tables. Term of occupancy, for example, is shown in Section I for colored and white farmers of the South, the North, and the West (Table 27); in Section II for colored and white owners free, owners mortgaged, part owners, cash tenants, share tenants, and managers, in the South (Tables 42 and 43); and in Table 70 for these tenure classes of colored farmers, by states.

The general tables give statistics in various combinations for state and county areas. Table 73, for example, gives for southern counties detail for size of farm and for tenure classes, and gives for each tenure class detail of acreage; value of land, buildings, and implements and machinery; number of dairy cows, work horses, and work mules; and acreage and yield of cotton and corn, on colored farms. The table thus assembles data by counties. The diverse and composite character of the general tables precludes an arrangement of them strictly in accordance with the order in which topics are taken up in Sections I and II, although this order is followed in so far as the character of the tables permit.

The more detailed tabulations are for farms of colored operators, data for Negroes separately from other colored operators not being available in compilations made from the schedules. The value of these statistics relating to the aggregate colored, as statistical statements of conditions and tendencies obtaining among Negro farm operators, varies from state to state, as the proportion colored other than Negro

varies in the aggregate of colored farm operators. Two state tables have been introduced (Tables 45 and 55), classifying the colored farm operators and colored owners, managers, and tenants, as Negro and "other colored." These tables show that in all Southern states, excepting Oklahoma, and in some of the Northern states, Negroes constitute so large a majority of the colored farm operators that statistics for colored operators may be accepted as fairly representing the Negro element. Among such Northern states are New Jersey (Negro farmers 472, other colored 4), Pennsylvania (Negro 543, other colored 3), Ohio (Negro 1,948, other colored 2), Indiana (Negro 785, other colored 20), Illinois (Negro 1,422, other colored 3), Iowa (Negro 187, other colored 14), Missouri (Negro 3,656, other colored 10), Kansas (Negro 1,532, other colored 159), and the New England states (Negro 310, other colored 32).

In certain states, however, the Indian, Chinese, and Japanese elements combined, i. e., the "other colored" element, outnumber Negroes among colored farm operators, and in other states these elements constitute so large a proportion of the colored operators that statistics for the colored can not be accepted as being necessarily indicative of conditions and tendencies obtaining among Negroes. Such states include all of the states of the Mountain and Pacific divisions, and among Northern states the following: New York (Negro farm operators 295, other colored 644), Wisconsin (Negro 48, other colored 543), Minnesota (Negro 29, other colored 264), North Dakota (Negro 22, other colored 721), South Dakota (Negro 67, other colored 2,741), and Nebraska (Negro 96, other colored 366).

In the West as a whole, which comprises the states of the Mountain and Pacific divisions, comparatively few of the colored farmers—only 482 out of 12,858—are Negroes. Statistics for colored farmers in this section obviously have no specific value for Negroes. In the states of the North combined, Negroes constitute approximately two-thirds—12,052 in a total of 17,884—of the colored farm operators, the proportion non-Negro in the aggregate colored of this section also being sufficiently large to invalidate the data, although, as has been noted, Negroes largely predominate among the colored farmers of individual Northern states.

In the South as a whole, and in each Southern state, with the exception of Oklahoma, the colored other than Negro constitute a negligible proportion among colored operators. Of the colored operators in the South, numbering 890,141 in 1910, 880,836 were Negroes and 9,305 were Indian, Chinese, and Japanese.

Of this non-Negro element in the aggregate colored, 7,462 were in Oklahoma, constituting approximately one-third of the colored farmers in this state; 1,200 were in North Carolina, in a total colored for the state of 65,656; and only 643 were in the 14 other Southern states.

It will be apparent from these figures that statistics for colored farm operators in the South and in the several Southern states, with exception of Oklahoma, are practically equivalent to statistics for Negroes.

Generally, in the tables following, therefore, where statistics are not available in published reports for Negroes separately from other colored and have not been specially compiled for Negroes in this report, the tables are restricted to the South. In some cases, however, statistics are given for colored operators in Northern and Western states, in order to cover those individual states in which Negroes largely predominate among colored operators. In other tables summary totals are given for colored operators in the North and West in order to distribute the aggregate shown for the United States as a whole, and by way of formally completing tables which give statistics for white farmers of the South, North, and West in comparison with statistics for colored operators in those sections. Such tables include, therefore, some totals for colored farm operators to which little specific significance attaches—totals which develop as statistical remain-

ders in the compilation of data for the South separately, and for whites in comparison with Negroes by geographic sections. Generally, however, as noted above, such totals have been eliminated by restricting the tabulation to the South.

Of Negro farm operators, 98.6 per cent in 1910 were in the South, and for nearly this proportion of Negro operators statistics in detail are practically available, Oklahoma being the only extensive southern area within which the colored other than Negro are sufficiently numerous to invalidate the data. Interest naturally attaches, however, specially to the condition of Negro farmers in the North and West, although they constitute only 1.4 per cent of the total number of Negro farmers in the country as a whole, and some compilations for Negroes have, therefore, been made for the Northern states.

Three general tables for counties have been compiled, one (Table 71) giving statistics of acreage and value of farm property on farms operated by Negroes, for all counties reporting Negro farmers; one (Table 72) giving statistics of acreage, and of acreage and yield of cotton and corn, for colored and white farmers in southern counties; and one (Table 73) giving, as has been noted, statistics of size of farms, and detail for tenure classes of farms operated by colored farmers in southern counties.

SECTION I.—STATISTICS OF NEGRO FARMS.

NUMBER OF FARMERS.

Negro farmers in 1910 numbered 893,370, constituting 14 per cent of the total number of farmers of all classes in the country as a whole.

Table 1 distributes population and farm operators in 1910 and in 1900 by racial classes.

¹ Less than one-tenth of 1 per cent.

During the decade the proportion Negro declined slightly in the population (from 11.6 per cent in 1900 to 10.7 per cent in 1910) and increased slightly among farm operators (from 13 per cent in 1900 to 14 per cent in 1910).

Table 2 shows the increase in population and in the number of farm operators during the decade 1900-1910 and the number of farm operators per 1,000 population at the beginning and end of the decade, by racial classes.

RACIAL CLASS.	INCREASE: 1900-1910.				FARM OPERATORS PER 1,000 POPULATION OF EACH CLASS.

Other.....	3,175					

¹ A minus sign (-) denotes decrease.

Negro farm operators increased during the decade 1900-1910 by 146,655, or 19.6 per cent, the increase in the number of farm operators being at a much more

NEGRO POPULATION.

rapid rate than the increase of the Negro population (11.2 per cent). In the same period white farm operators increased 9.5 per cent, the white increase per cent for farm operators being less than one-half the corresponding rate for Negroes, and less than one-half the rate of increase of the white population (22.3 per cent). In this period, therefore, agriculture became, relatively to other fields of employment, more important among Negroes, in so far as numbers engaged may be accepted as an index of importance, and less important, relatively to other fields of employment, among whites.

The number of farm operators per 1,000 population increased among Negroes from 85 in 1900 to 91 in 1910, and declined among whites from 74 to 67.

Only a very small proportion of the Negro farm operators were in the North and West in either 1910 or 1900 and this small proportion declined during the decade (from 1.9 per cent in 1900 to 1.4 per cent in 1910). In 1910, 39.7 per cent, or nearly two-fifths of the Negro operators were in the South Atlantic division, 36.4 per cent were in the East South Central division, and 22.5 per cent were in the West South Central division. The geographic distribution of Negro farm operators, by sections and divisions, in 1910 was not materially different from their distribution in 1900.

In each of these years more than one-half of the white farm operators were in the North, the percent-

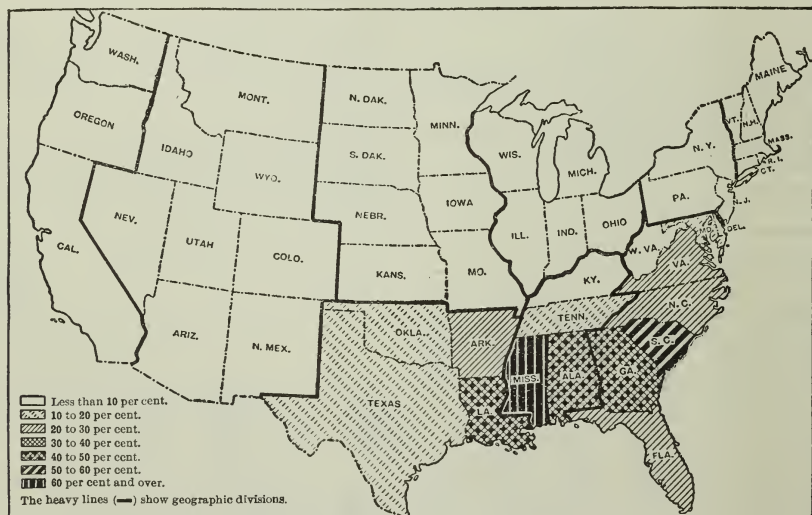

age in the North in 1910 being 52.8, in the South, 40.6, and in the West, 6.6.

The distribution of farm operators, Negro and white, by sections and southern divisions, in 1910 and in 1900 is shown in Table 3.

MAP I.—FARMS OF COLORED FARMERS—PERCENTAGE OF ALL FARMS, BY STATES: 1910 (SOUTHERN STATES ONLY).

The number of Negro farm operators increased in the South during the decade by 148,474, or 20.3 per cent, and in the North decreased by 1,964, or 14 per cent. In the South Atlantic and in the East South Central division the increase per cent of Negro farm operators exceeded that of white farm operators, while in the West South Central division, and in the West, the increase per cent for whites exceeded that for Negroes.

Table 4 shows these increases, together with the proportion of farm operators in the Negro and white population in 1910 and in 1900.

Table 4

DIAGRAM I.—NUMBER OF FARMS CLASSIFIED BY COLOR AND NATIVITY OF OPERATOR, BY STATES: 1910.

The proportion of farm operators in the Negro population increased during the decade from 77 to 86 per 1,000 population in the South Atlantic division, and from 107 to 122 per 1,000 population in the East South Central division. In the West South Central division the proportion declined slightly—from 104 to 102 per 1,000 population. The small proportion of farmers in the Negro population of the North declined in this period from 16 to 11 per 1,000 population, and in the West from 11 to 10 per 1,000 population. In this period the proportion of farmers in the white population of each section and division declined.

Table 45 (p. 588) gives the number of colored, Negro, and white farm operators, by divisions and states, for the years 1910 and 1900, with the increase during the decade for Negro and white operators, the number of Negro farm operators per 1,000 Negro population in 1910 and in 1900, and the number of Negro farm operators per 1,000 colored operators in 1910.

FARM ACREAGE: TOTAL, IMPROVED, AND UNIMPROVED.

The aggregate acreage, acreage improved, and acreage unimproved, of farms operated by Negroes and by whites in 1910 and in 1900, and the increase in these acreages during the decade 1900-1910, are shown in Tables 46, 47, and 48 (pp. 589, 590, and 591), by divisions and states. Table 5 summarizes the increases of Table 48, by sections.

Table 5

SECTION AND DIVISION.	INCREASE: ¹ 1900-1910.					
	Acres in farms.		Improved acres in farms.		Unimproved acres in farms.	
	Of Negroes.	Of whites.	Of Negroes.	Of whites.	Of Negroes.	Of whites.
United States.....	4,045,590	35,340,269	4,482,404	59,216,959	-436,814	-23,876,650

The North.....	-2,848	30,333,959	-2,674	28,590,537	-174	1,874,422
The West.....	50,801	16,586,872	35,119	10,645,799	14,955	5,591,973

¹ A minus sign (-) denotes decrease.

The acreage in Negro farms increased during the decade from 38,233,920 acres in 1900 to 42,279,510 acres in 1910, the increase amounting to 4,045,590 acres.

This increase was nearly all in the South, in which section the acreage operated by Negroes increased by 3,998,034 acres, although in the same period the total acreage operated by white farmers decreased in the South by 11,580,562 acres.

In the North Negro farm acreage fell off slightly, by 2,848 acres, and in the West increased by 50,404 acres.

The aggregate acreage of improved land in Negro farms increased from 23,362,786 acres in 1900 to 27,845,190 acres in 1910, the increase amounting to 4,482,404 acres. In the same period unimproved acreage in Negro farms decreased from 14,871,134

NEGRO POPULATION.

to 14,434,320 acres, the decrease amounting to 436,814 acres. Unimproved acreage in Negro farms decreased in the South by 451,595 acres, and in the North by 174 acres, and increased in the West by 14,955 acres.

Improved acreage operated by white farmers in the South increased by 20,061,623 acres, the decrease noted above in total farm acreage of whites in the South developing from the decrease of 31,642,185 acres in unimproved farm land.

Table 6 shows the percentage distribution, by sections and southern divisions, of total, improved, and unimproved land in farms of Negroes and whites in 1910.

SECTION AND DIVISION.	PERCENTAGE DISTRIBUTION BY SECTION AND DIVISION: 1910.					
	All land in farms.		Improved land in farms.		Unimproved land in farms.	
	Of Negroes.	Of whites.	Of Negroes.	Of whites.	Of Negroes.	Of whites.
United States.....	100.0	100.0	100.0	100.0	100.0	100.0
The South.....	97.8	37.5	97.6	27.4	97.8	49.4

The North.....	2.1	49.4	2.2	64.3	1.7	31.8
The West.....	0.3	13.2	0.2	8.3	0.5	18.8

Only 2.4 per cent of the farm acreage operated by Negroes in 1910, as compared with 62.5 per cent of

white farm acreage, was in the Northern and Western states. The proportion in the South Atlantic division of the total Negro farm acreage was 41.6 per cent, or more than two-fifths, the corresponding proportion for white farm acreage being 10.3 per cent, or approximately one-tenth. For the East South Central division the proportion was 32.1 per cent for Negro farm acreage and 8.2 per cent for white farm acreage, and in the West South Central division, 23.9 and 19 per cent, respectively.

The proportion of Negro farm acreage to total farm acreage in the several sections and divisions—stated as the number of acres, of acres improved, and of acres unimproved, in farms operated by Negroes per 1,000 acres in all farms in the specified areas—is shown in Table 7 for the two census years 1910 and 1900.

MAP II.—LAND IN FARMS OF COLORED FARMERS—PERCENTAGE OF ALL LAND IN FARMS, BY STATES: 1910 (SOUTHERN STATES ONLY).

Per 1,000 acres in farms in 1910 in the country as a whole, 48 acres were operated by Negroes, the proportion operated by Negroes having increased slightly during the decade—from 46 per 1,000 in 1900.

In the South the number of acres in Negro farms per 1,000 acres in all farms was 116 in 1910, the proportion having increased during the decade from 103 in 1900. In the North Negro farm acreage per 1,000 total acreage averaged only 2 acres, and in the West, only 1 acre.

In each southern division the proportion of Negro farm acreage to total farm acreage showed a material increase during the decade 1900-1910, the greatest increase and the highest proportion being in the South Atlantic division, in which the number of acres in Negro farms per 1,000 acres in all farms increased from 149 in 1900 to 170 in 1910.

The average number of acres per farm, for Negro and white farms in 1910 and in 1900, is shown in Table 8 for the Southern states, with the decrease in the average size of farms during the decade.

The average acreage per Negro farm decreased from 51.2 acres in 1900 to 47.3 acres in 1910, the decrease amounting in the average to 3.9 acres. In the same period the average acreage of white farms decreased from 160.3 to 153 acres, giving a decrease for the average size of 7.3 acres.

In the South as a whole, and in each southern division the average acreage per farm of Negro farms

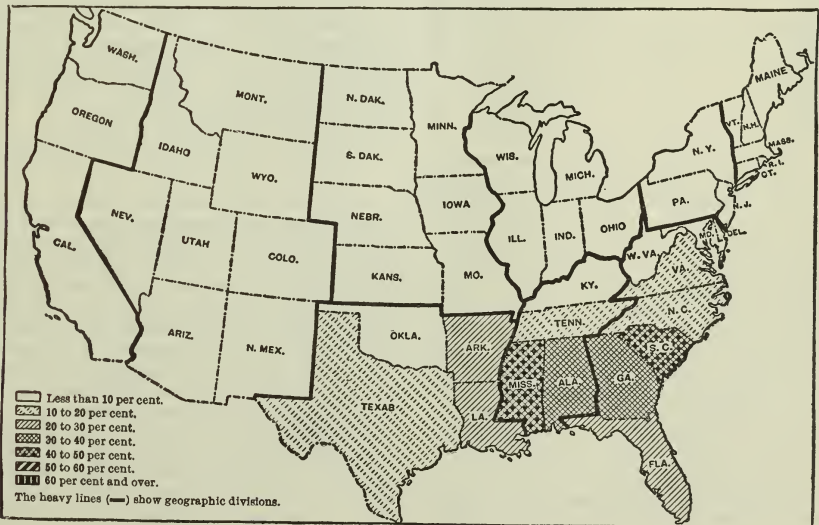

decreased during the decade. In the North the average acreage for Negro farms increased from 62.2 to 72.1 acres, and in the West from 225.5 to 262.3 acres.

MAP III.—IMPROVED LAND IN FARMS OF COLORED FARMERS—PERCENTAGE OF ALL IMPROVED LAND, BY STATES: 1910 (SOUTHERN STATES ONLY).

NEGRO POPULATION.

In each Southern state during the decade the average acreage per farm decreased for both Negro and white farms, with the single exception that the average acreage of Negro farms in Texas increased by 2.5 acres.

The range in average acreage per farm in the Southern states in 1910 was from 37.5 acres in Kentucky to 80.8 acres in Oklahoma for Negro farms, and from 87.9 acres in Kentucky to 310.9 acres in Texas for white farms.

The percentage improved of all land in farms and the average number of acres improved per farm in 1910 is shown in Table 9 for sections and southern divisions and states.

The proportion improved of Negro farm acreage in 1910 in each section and in each southern division and state, except Delaware, Maryland, and Virginia, exceeded the proportion improved of land in white farms. Of land in farms operated by Negroes in the South, 65.8 per cent was improved, the corresponding proportion for white farms being 39.4 per cent. In the South Atlantic division the percentage improved for land in Negro farms was 62.2 per cent, and for land in white farms, 43.5 per cent; in the East South Central division the percentage improved was 70.3 for Negro and 50.6 for white farms; and in the West South Central division, 66 for Negro and 32.4 for white farms.

The relatively large extent of unimproved land in white farms accounts in some measure for the excess of the average acreage of white over Negro farms. In the South, for example, the average acreage of white farms was, as shown in Table 8, 141.3 acres in 1910, of which, as shown in Table 9, 39.3 per cent was improved

land, giving an average of 55.7 acres improved per white farm; the average acreage of Negro farms in the South was 46.9 acres, of which 65.8 per cent was improved, giving an average acreage improved per Negro farm of 30.8 acres. On the basis of total acreage Negro farms in the South averaged less than one-third the size of white farms, while on the basis of improved acreage they averaged nearly three-fifths the size of white farms. On the basis of improved acreage Negro farms in the West averaged larger than white farms, the average number of acres improved per farm in the West being 116.8 for Negro farms and 104.1 for white farms. For no other area shown in Table 9, however, does the average for Negro farms exceed that for white farms.

Table 10 distinguishes acreage in woodland from other unimproved land in farms. This distinction is made in the acreage reported for Negro farms, by counties, with totals for states, in Table 71 (p. 642).

SECTION AND DIVISION.	ACRES IN FARMS OPERATED BY NEGROES: 1910.				
	Total.	Improved.	Unimproved.		
			Total.	Woodland.	Other.
United States.....	42,279,510	27,845,190	14,434,320	11,938,284	2,496,036
The South.....	41,284,471	27,170,413	14,114,038	11,797,439	2,316,619

East South Central.....	15,573,980	9,548,129	4,023,831	3,196,381	829,470
West South Central.....	10,105,003	6,668,869	3,439,134	2,868,810	570,324
The North.....	868,630	618,478	250,152	129,660	120,492
The West.....	126,409	56,299	70,110	11,185	58,925

Of the 14,434,320 acres of unimproved land in Negro farms in 1910, 11,938,284 acres were woodland, and 2,496,036 were other unimproved land, including unimproved pasture acreage. Nearly one-half—5,732,248 acres—of the woodland in Negro farms was in the South Atlantic division.

VALUE OF FARM PROPERTY: LAND, BUILDINGS, IMPLEMENTS AND MACHINERY, AND LIVE STOCK.

In the compilation of data relating to the value of farm property, four classes of such property are designated, namely, land, buildings, implements and machinery, and live stock. For these classes of property, the aggregate value reported in 1910 and in 1900 on farms operated by Negro farmers is shown for all the divisions and states in Table 49 (p. 592). The aggregate value for each class of property on Negro farms in the United States for these years with the increase for the decade 1900-1910 and percentage distribution, by class of property, is shown in Table 11.

Negro farmers in 1910 reported an aggregate value of farm property of \$1,141,792,526. During the decade 1900-1910 the aggregate value of farm property on such farms increased by \$641,851,292, or 128.4 per cent. In this decade, therefore, the value of Negro farm property more than doubled.

DIAGRAM II.—AVERAGE VALUE OF FARM PROPERTY PER FARM, FOR COLORED AND WHITE FARMERS, BY STATES: 1910 (SOUTHERN STATES ONLY).

DIAGRAM IV.—AVERAGE VALUE OF FARM PROPERTY PER ACRE, FOR COLORED AND WHITE FARMERS, BY STATES: 1910.

DIAGRAM III.—AVERAGE VALUE OF FARM PROPERTY PER FARM FOR COLORED AND WHITE FARMERS, BY STATES: 1900 (SOUTHERN STATES ONLY).

DIAGRAM V.—AVERAGE VALUE OF FARM PROPERTY PER ACRE FOR COLORED AND WHITE FARMERS, BY STATES: 1910.

Table 11 VALUE OF FARM PROPERTY ON FARMS OPERATED BY NEGROES.

CLASS OF FARM PROPERTY.	Amount.		Increase: 1900-1910.		Percentage distribution.	
	1910	1900	Amount.	Per cent.	1910	1900
Total.....	\$1,141,792,526	\$499,941,234	\$641,851,292	128.4	100.0	100.0
Land.....	756,158,264	324,242,997	431,915,267	133.2	66.2	64.9
Buildings.....	166,559,439	71,902,265	94,657,174	131.6	14.6	14.4
Implements and machinery.....	34,178,052	18,859,757	15,318,295	81.2	3.0	3.8
Livestock.....	184,896,771	84,936,215	99,960,556	117.7	16.2	17.0

The value of land in Negro farms increased from \$324,242,997 in 1900 to \$756,158,264 in 1910, the increase amounting to \$431,915,267, or 133.2 per cent. In this period the value of buildings on Negro farms increased by \$94,657,174, or 131.6 per cent, the value of implements and machinery increased \$15,318,295, or 81.2 per cent, and the value of live stock increased \$99,960,556, or 117.7 per cent.

In 1910, as in 1900, the value of land constituted approximately two-thirds of the total value of farm property reported for Negroes. The distribution of the aggregate value of farm property, by classes of property in 1910, did not differ materially from that in 1900.

In Table 12 the average value per farm of farm property on Negro farms is shown for 1910 and 1900,

with the increase in average value for the decade 1900-1910.

Table 12 AVERAGE VALUE PER FARM OF FARM PROPERTY ON FARMS OPERATED BY NEGROES.

CLASS OF FARM PROPERTY.	1910		1900		Increase: 1900-1910.	
	Amount.	Per cent.	Amount.	Per cent.	Amount.	Per cent.
Total.....	\$1,278	\$669	\$609	91.0		
Land.....	846	434	412	94.9		
Buildings.....	187	96	91	94.8		
Implements and machinery.....	38	25	15	52.0		
Livestock.....	207	114	93	81.6		

Negro farms reported a value of farm property in 1910 averaging \$1,278 per farm. The corresponding average for 1900 was \$669 and the increase in the average for the decade 1900-1910 \$609, or 91 per cent. Average value per farm of farm property nearly doubled in the ten years 1900-1910. Similar large proportional increases are shown for the average value per farm of land, which increased from \$434 to \$846, or by 94.9 per cent; of buildings, which increased from \$96 to \$187, or 94.8 per cent; and of live stock, which increased from \$114 to \$207, or by 81.6 per cent. The increase in the average value of implements and machinery per farm on Negro farms is absolutely and relatively much less than for other classes of farm property.

NEGRO POPULATION.

Table 13 shows the proportional distribution, by class of farm property, of the values reported on Negro farms in 1910 and in 1900 for sections and southern divisions.

CLASS OF PROPERTY AND YEAR.	PERCENTAGE DISTRIBUTION, BY CLASS OF PROPERTY, OF VALUE OF FARM PROPERTY ON FARMS OPERATED BY NEGROES.						
	United States.	The South.				The North.	The West.
		Total.	South Atlantic division.	East South Central division.	West South Central division.		
All farm property:							
1910.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0
1900.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Land:							
1910.....	66.2	66.0	66.7	63.6	67.8	70.3	76.9
1900.....	61.9	64.5	65.2	63.3	65.2	70.1	68.4
Buildings:							
1910.....	14.6	14.6	16.1	14.7	12.4	14.3	6.3
1900.....	14.4	14.4	16.4	13.5	13.0	15.0	10.6
Implements and machinery:							
1910.....	3.0	3.0	3.0	3.1	3.0	2.5	2.2
1900.....	3.8	3.8	3.6	4.0	3.8	3.2	3.4
Live stock:							
1910.....	16.2	16.4	14.2	18.6	16.9	12.9	14.6
1900.....	17.0	17.3	14.8	19.2	18.0	11.8	17.6

As compared with 1900 in each of the areas designated in Table 13 the value of land in Negro farms constituted in 1910 a slightly larger proportion of the aggregate value of farm property of such farms. For this class of property as for each of the other classes of property, however, the changes in the proportions of all farm property during the decade were inconsiderable.

The percentage distribution, by sections, of the aggregate of each class of Negro farm property is shown in Table 14 for 1900 and for 1910.

SECTION AND YEAR.	PERCENTAGE DISTRIBUTION, BY SECTIONS, OF VALUE OF FARM PROPERTY ON FARMS OPERATED BY NEGROES.				
	Total.	Land.	Buildings.	Implements and machinery.	Live stock.
United States:					
1910.....	100.0	100.0	100.0	100.0	100.0
1900.....	100.0	100.0	100.0	100.0	100.0
The South:					
1910.....	94.9	94.6	95.2	95.8	95.9
1900.....	93.9	93.4	93.7	94.9	95.7
The North:					
1910.....	4.7	5.0	4.6	3.9	3.7
1900.....	5.9	6.4	6.1	4.9	4.1
The West:					
1910.....	0.4	0.5	0.2	0.3	0.4
1900.....	0.2	0.2	0.2	0.2	0.2

For each of the main classes of farm property the proportion reported from Negro farms in the South in 1910 exceeded slightly the corresponding proportion reported in 1900. Of the aggregate value of farm property in 1910, 94.9 per cent was reported from Negro farms in the South; 4.7 from Negro farms in the North, and 0.4 per cent for Negro farms in the West.

The aggregate value of each class of farm property on farms operated by Negroes and the average value per farm in 1910 and in 1900 with the increase in the aggregate values and in the average values for the decade 1900-1910 is shown for each of the nine geographic divisions in Table 15.

The average increase in value of farm property per farm in each of these divisions was very marked. In New England the average value per farm of property on Negro farms increased from \$2,208 in 1900 to \$3,049 in 1910, or by \$841; in the Middle Atlantic division the corresponding increase was from \$2,801 in 1900 to \$4,675 in 1910, giving an average increase per farm of \$1,874; in the East North Central division the average value increased from \$2,227 to \$4,143, or by \$1,916; in the West North Central division, from \$1,847 to \$4,713, or by \$2,866, and in the West (the Mountain and Pacific divisions combined), from \$3,117 to \$9,670, or by \$6,453.

The average value of land in Negro farms increased in the decade 1900-1910 by \$165 in New England; \$1,054 in the Middle Atlantic division; \$1,382 in the East North Central division; \$2,081 in the West North Central division; and \$5,304 in the West.

Increase in the average value of buildings per Negro farm in the northern and western divisions ranges from \$262 in the West North Central division to \$577 in the Middle Atlantic. Increase in the value of implements and machinery per farm ranges from \$28 in the East North Central division to \$106 in the Mountain division, and the increase in the average value of live stock from \$149 in New England to \$1,219 in the Mountain division.

It will be apparent from the figures given in Table 15 that the increases in the aggregate values of different classes of farm property and in the average values per Negro farm during the decade 1900-1910 were very marked in all sections of the country.

FARM ANIMALS: FARMS REPORTING, AND VALUE AND NUMBER OF ANIMALS.

Statistics for classes of farm animals, by states, are presented in Tables 63, 64, 65 (pp. 620 to 622), and Table 69 (pp. 628 to 637), and for counties in Southern states in Table 73 (pp. 698 to 764).

Each of these tables distinguishes tenure classes of farms. Tables 16 to 22, following, summarize the data for classes of live stock on farms without distinguishing tenure classes. Table 16 gives for 1910 and for 1900 the number and percentage of colored farms reporting and not reporting domestic animals, poultry, and bees, with the increase for 1900-1910. The totals shown in Table 16 for the North and West combined, as has been explained in the introductory section of this chapter, relate to a colored aggregate in which classes other than Negro constitute so large a proportion as to invalidate the significance of the data for Negro farms.

¹ A minus sign (-) denotes decrease.

Of the 890,141 colored farms in the South in 1910, 804,994, or 90.4 per cent, reported domestic animals, and 85,147, or 9.6 per cent, did not report domestic animals. The proportion reporting domestic animals on colored farms in the South was somewhat smaller in 1910 than in 1900, although the number of such farms increased by 120,423 during the decade 1900-1910. In this period the proportion of colored farms reporting poultry, and the proportion reporting bees also declined, although the number of farms reporting poultry increased by 107,052.

The principal classes of farm animals are distinguished in Table 17, and the number of colored farms reporting and not reporting each class of animals designated is given for 1910 and for 1900, the corresponding data being given for white farms in 1910.

¹ For total number of colored farms in 1910 and in 1900, distributed in this table as reporting and not reporting, see Table 16. The number of white farms in 1910 was as follows: United States, 5,440,619; the South, 2,307,406; the North and West, 3,233,213.

In the South the number of colored farms reporting neat cattle increased from 397,314 in 1900 to 551,940 in 1910, and the number not reporting neat cattle decreased in the same period from 343,356 to 338,201. The number of colored farms reporting dairy cows in the South increased from 337,870 in 1900 to 512,242 in 1910, the number not reporting decreasing from 402,800 in 1900 to 377,899 in 1910. The number of farms reporting horses fell off slightly during this period—from 337,129 to 334,537—this decrease being much more than offset by the large increase in the number of farms reporting mules—from 346,771 in 1900 to 441,178 in 1910. The number of farms reporting swine also showed a very large increase—from 509,495 in 1900 to 602,090 in 1910.

The percentages of Table 18, which are based upon the figures given in Table 17, show the proportion of farms reporting the several classes of farm animals in the South and in the North and West for Negro farms in 1910 and 1900 and for white farms in 1910.

A smaller proportion of colored farms than of white farms in the South reported each of the several classes of animals designated in Table 18, with the exception that the proportion of colored farms reporting mules in the South was slightly greater than the proportion of white farms reporting animals of this kind. The proportion of colored farms in the South reporting neat cattle, dairy cows, and mules increased during the decade and the proportion reporting horses

declined, slight declines being shown also for sheep and for swine.

CLASS OF ANIMAL.	PERCENTAGE REPORTING ANIMALS OF CLASS SPECIFIED.					
	The South.			The North and West.		
	Of colored farms.		Of white farms: 1910.	Of colored farms.		Of white farms: 1910.
	1910	1900		1910	1900	
Neat cattle.....	62.0	53.6	84.9	59.0	54.9	87.9
Dairy cows.....	57.5	45.6	82.6	40.0	40.6	86.4
Horses.....	37.6	45.5	65.1	85.1	86.5	89.5
Mules.....	49.6	46.8	47.0	12.0	14.0	12.0
Sheep.....	0.4	0.7	8.2	10.9	5.3	13.1
Swine.....	67.6	68.8	73.8	32.5	43.2	65.3

Less than two-thirds of the colored farms in the South in 1910 reported dairy cows, and slightly more than two-thirds of the colored farms reported swine.

The aggregate value of domestic animals, poultry, and bees reported by colored and by white farms in 1910 and in 1900 is given, by sections, in Table 19.

¹ A minus sign (-) denotes decrease.

The value of domestic animals on colored farms in the South increased from \$85,216,337 in 1900 to \$177,461,964 in 1910, the increase amounting to \$92,245,627. Of the aggregate value of domestic animals on all farms, white and colored, the proportion

on colored farms increased during the decade from 10.9 per cent in 1900 to 13.8 per cent in 1910.

The value of poultry reported on colored farms in the South increased from \$3,788,792 in 1900 to \$5,121,775 in 1910, the increase amounting to \$1,332,983. The proportion reported by colored farms of the aggregate value of poultry on all farms in the South decreased from 15.6 per cent in 1900 to 13.7 per cent in 1910.

Table 20 gives, for each class of domestic animals on colored and on white farms in 1910, the aggregate value reported, the average value per farm, and the percentage reported by colored farms of the aggregate value reported on all farms.

The value of neat cattle reported on colored farms in the South in 1910 was \$33,028,881, constituting 9 per cent of the aggregate value of neat cattle reported on all farms in the South. The aggregate value of horses on colored farms was \$47,537,525, or 11.3 per cent of the aggregate value of horses reported on all farms; the value of mules reported on colored farms was \$84,127,172, or 22.2 per cent of the aggregate value for this class of animals in the South; and the value of swine on colored farms was \$12,331,374, or 15.2 per cent of the aggregate value of swine on all farms.

The average value per farm of each class of farm animals was lower on colored than on white farms. The value of neat cattle per farm in the South averaged \$37.11 on colored farms and \$151.85 on white farms; of horses, \$53.40 on colored farms and \$169.66 on white farms; of mules, \$94.51 on colored farms and \$133.25 on white farms; of swine, \$13.85 on colored farms and \$31.12 on white farms. Colored farms reported only very inconsiderable values per farm of sheep, asses and burros, and goats.

Table 21 gives the number and value of matured animals of specified classes on colored and white farms in the South and in the North and West, together with the average value per head for each class of animals in 1910.

¹ Colored excess.

The average value per head of dairy cows, work horses, sheep, and hogs on colored farms in the South was in the case of each class of animals below the average for animals on white farms, there being practically no difference between colored and white farms as regards the average value per head of work mules. The value of dairy cows on colored farms of the South averaged \$22.37 per head and on white farms, \$27.33; of work horses, \$90.12 on colored and \$98.21 on white farms; of work mules, \$129.42 on colored and \$128.92 on white farms; of sheep, \$3.19 on colored and \$4.09 on white farms; and of hogs, \$4.90 on colored and \$5.78 on white farms.

The number of farms reporting and not reporting dairy cows, work horses, and work mules, and the average number of each class of animals per 100 farms and per 100 farms reporting in 1910, is shown in Table 22 for colored farms in the South and in each southern division.

NEGRO POPULATION.

Of the 890,141 farms operated by colored farmers in the South 512,242 reported dairy cows, and 377,899 did not report this class of animal; 332,370 farms reported, and 557,771 did not report work horses; and 436,398 reported, and 453,743 did not report work mules.

Relatively to the number of farms, dairy cows on colored farms were most numerous in the West South Central division, the average number per 100 farms being 137 in this division, 80 in the South Atlantic division, and 110 in the East South Central division. Work horses, also, relatively to the number of farms, were most numerous in the West South Central division, averaging 101 per 100 farms in this division, 39 per 100 farms in the South Atlantic and 49 per 100 farms in the East South Central division.

CROPS: FARMS REPORTING, ACREAGE, YIELD, AND VALUE.

Statistics of farms reporting acreage, yield, and value for 20 selected crops on colored farms in the South are given, by divisions and states, in Table 50 (pp. 594 to 600). Acreage in selected crops on colored farms of the South in 1909 and in 1899, is given, by divisions and states, in Table 51 (p. 601); and acreage in selected crops on colored and white farms of the South in 1909, by divisions and states, in Table 52 (p. 602). The geographic distribution of the cotton and corn acreage and of the 1909 yield of these crops on colored and white farms is shown in detail for counties in Table 72 (pp. 674 to 697).

Table 23 assembles the totals for the South, of farms reporting acreage, yield and value for the 20 crops covered, by divisions and states, in Table 50.

FARMS REPORTING SPECIFIED CROP, ACREAGE, YIELD, AND VALUE OF CROP: 1910.

1 Data not available.

These crops include the principal crops grown on southern farms, and the extent to which they are grown on farms operated by colored farmers is a fair indication of the importance of the agricultural activities of the Negro population in this section of the country. In Table 23 the crops are listed in order according to the aggregate value of the 1909 yield on colored farms.

The number of southern farms reporting cotton in 1909 was 1,706,767, of which 684,721, or 40.1 per cent, were operated by colored farmers; the acreage in cotton on these farms was 31,946,142 acres, of which 12,096,638 acres, or 52.7 per cent of the total acres in cotton on all farms, were on farms operated by colored farmers; the yield of cotton was 10,594,360 bales, of which 4,065,978, or 38.4 per cent, were grown on colored farms; and the value of the crop was \$700,199,244, of which \$269,868,346, or 32.4 per cent, represented the product of colored farms. It thus appears that more than one-half of the cotton acreage in the South in 1909, nearly two-fifths of the yield, and approximately one-third of the value of the yield was reported by colored farms.

To the value of this crop must be added \$47,068,246, the value of the cotton seed produced in 1909. The value of these two crops combined exceeded the value of all other crops combined on colored farms.

It is apparent in Table 23 that colored farmers to a much greater degree than white farmers, in proportion to their numbers and the acreage in their farms, were occupied in the culture of cotton. Of the aggregate value of corn grown on southern farms, only 17.3 per cent, or approximately one-half the proportion shown for cotton (32.4 per cent), represented the yield of colored farms. The value of tobacco grown on colored farms represented 12.5 per cent of the total value of this crop in the South, and on the basis of value, colored farms produced 23.8 per cent of the sweet potatoes, 26.3 per cent of the peanuts, 26.9 per cent of the dry peas, and less than 10 per cent of other crops designated in Table 23, the proportions for these other crops ranging from 0.6 per cent for barley to 9.5 per cent for potatoes.

The crops grown on colored farms are naturally determined primarily by the geographic distribution of the colored farming population, which is largely concentrated in the cotton belt of the South.

The average yield and value, per colored farm reporting, and per acre planted, is given in Table 24 for each of the 20 crops designated in Table 23.

Per colored farm reporting cotton in 1909, the average yield was 5.9 bales, and the average value of the crop, \$394.12. Per acre planted to this crop on colored farms, the average yield was three-tenths of 1 bale, and the average value, \$22.31. To these values must be added the average values of cotton seed,

\$68.74 per farm, and \$3.89 per acre planted to cotton. The average yield of corn per colored farm reporting corn was 127.4 bushels, and the average value of the crop \$103.32. Per acre planted to corn, the average yield was 12.9 bushels, and the average value of the crop, \$10.43. Tobacco showed the second largest average value per farm reporting (\$231.06), and the largest value of any crop per acre planted (\$57.87). Average value of crop per farm reporting for other crops than those mentioned ranged from \$12.89 for dry edible beans to \$146.62 for alfalfa; and average value of crop per acre planted, from \$6.10 for dry peas to \$47.56 for potatoes.

¹ Data not available.

Acreage in nine principal crops on colored and white farms in 1909 and in 1899 is shown for the South and for each of the three southern divisions in Table 25, which gives, also, the percentage in colored farms of the total acreage reported for each crop in these years and the increase for the decade 1900-1910.

The acreage reported by colored farms in 1909 for each of the crops specified in Table 25, excepting rice and wheat, was greater than the acreage reported for these crops in 1899, and excepting oats and wheat, a larger acreage was reported also on white farms in 1909 than in 1899 for each crop.

Of the total southern acreage in corn, cotton, and wheat, a slightly smaller proportion was reported by colored farms in 1909 than in 1899, and of the total acreage in rice a much smaller proportion was on colored farms in 1909 than in 1899. Other crops show a slightly larger proportion on colored farms, of the total acreage in 1909 as compared with 1899.

Acreage in cotton on colored farms in 1909 exceeded the acreage in this crop on colored farms in 1899 by 2,440,376 acres, or by 25.3 per cent, the corresponding increase for white acreage in cotton being 5,276,470 acres and 36.2 per cent. Colored acreage in hay and

NEGRO POPULATION.

forage in 1909 exceeded the acreage in this crop in 1899 on colored farms by 152,053 acres, or 48 per cent, and on white farms by 2,423,326 acres, or 42.3 per cent.

The relatively small acreage in rice on colored farms fell off in 1909 as compared with 1899 by 40.3 per cent, white farms showing an increase of 98.1 per cent.

¹ A minus sign (-) denotes decrease.

Acreage in cotton showed substantial increases on both colored and white farms in each of the three southern divisions. Acreage in corn increased on colored farms, and decreased on white farms in the South Atlantic division, decreased on both colored and white

farms in the East South Central division, and increased on both colored and white farms in the West South Central division.

While the acreage in each of the principal crops on colored and white farms was distributed over areas of

large extent in the South, it may be noted that for some of these crops, such as cotton, tobacco, and rice, the acreage was largely within certain states, no acreage whatever being reported from certain states, while for the other crops the acreage was distributed throughout the entire South. Table 50 (pp. 594 to 600) shows, for example, that no acreage in cotton was reported from Delaware, Maryland, or West Virginia, that only small acreages were reported from Virginia and Kentucky, and that the principal cotton-growing states were North and South Carolina, Georgia, Alabama, Mississippi, Arkansas, Oklahoma, and Texas—nearly one-third of the total cotton acreage in the South being in the state of Texas, which produced nearly one-fourth of the 1909 yield. Only 13.7 per cent of the cotton acreage of Texas, however, was in farms operated by colored farmers, the proportion on colored farms in Mississippi being 66.6 per cent; in Louisiana, 53.7 per cent; in South Carolina, 53.4 per cent; in Alabama, 52.6 per cent; and in Georgia, 50.5 per cent.

Corn acreage was reported from colored farms in every Southern state, the acreage ranging from 4,421 acres in West Virginia to 1,278,627 acres in Georgia.

Although some acreage in tobacco was reported from each Southern state, except Delaware, only a very small aggregate acreage in this crop was reported from the Gulf states. Of the tobacco acreage in Kentucky, which amounted to 469,795 acres—being more than double the acreage reported by any other state—only 26,298 acres, or 5.6 per cent of the total, were on colored farms. Of the tobacco acreage in North Carolina, amounting to 221,890 acres, 56,471 acres, or 25.4 per cent, were on colored farms; and of the acreage in Virginia, amounting to 185,427 acres, 59,051 acres, or 31.8 per cent, were on colored farms.

The acreage in sweet potatoes was widely distributed throughout the South, the proportion on colored farms ranging from 0.1 per cent in West Virginia to 47.9 per cent in South Carolina. The rice acreage was practically confined to South Carolina, Georgia, Arkansas, Louisiana, and Texas, more than five-sixths of the entire acreage being in Louisiana and Texas, in which states only a small proportion of the rice acreage was on colored farms (4.4 per cent in Louisiana and 3.1 per cent in Texas).

SIZE OF FARMS.

Farms operated by colored and by white farmers are classified, by size, in Table 53 (pp. 603 to 606), distinguishing 10 size groups. In this table is given for each southern state in 1910 and in 1900, the number of farms under 3 acres, 3 to 9, 10 to 19, 20 to 49, 50 to 99, 100 to 174, 175 to 259, 260 to 499, 500 to 999, and 1,000 acres and over. For each of these groups there is given also the increase or decrease in number of farms during the decade 1900-1910, and the number of colored farms per 1,000 of all farms in each size group.

Table 26 gives for 1910 totals for the South for the size groups specified above.

SIZE OF FARM.	Number.			Distribution per 1,000.		Colored farms per 1,000 colored farms.
	Total.	Colored farms.	White farms.	Col. colored farms.	White farms.	
Total.....	3,097,547	890,141	2,207,406	1,000	1,000	287
Under 3 acres.....	2,928	402	2,526	(1)	1	137

500 to 999 acres.....	41,183	1,881	39,302	2	18	46
1,000 acres or more.....	20,890	455	20,435	1	9	22

¹ Less than 1.

Nearly one-half (426,540) of the total number of colored farms in the South in 1910 were in the size group 20 to 49 acres, the average number of such farms per 1,000 colored farms of all sizes being 479. Colored farms of 10 to 19 acres per 1,000 farms of all sizes numbered 171, this being the proportional number also for the size group 50 to 99 acres. Farms of less than 10 acres numbered 70 per 1,000 farms of all sizes; and farms of 100 acres or more, 110.

As compared with white farms in the South, farms operated by colored farmers were more largely concentrated in the size group 20 to 49 acres, the number per 1,000 for this size group being nearly twice as great for colored as for white farms (479 as compared with 240). A larger proportion of white than of colored farms were in each of the size groups including farms of 50 or more acres.

The relatively greater concentration of colored farms in the size groups 3 to 9, 10 to 19, and 20 to 49 acres is apparent in the proportion colored in farms of these sizes, as shown in the last column of Table 26. In the South colored farms numbered 287 per 1,000 farms of all sizes, but in the size groups 10 to 19 and 20 to 49 acres, colored farms numbered 446 per 1,000, and in the size group 3 to 9 acres, 394 per 1,000.

TERM OF OCCUPANCY.

Colored farms in 1910 are classified by term of occupancy in Table 70 (pp. 638 to 641), by tenure classes for all divisions and states. The aggregates of this table without distinction of tenure are given for sections and southern divisions in Table 27, together with corresponding figures for white farms.

Of the 920,883 colored farms in the United States in 1910, 837,227, or 90.9 per cent, reported term of occupancy. Of these farms reporting, 191,808, or 22.9 per cent, reported occupancy of less than one year; 105,781, or 12.6 per cent, occupancy of one year; 242,724, or 29 per cent, occupancy of two to four years; 131,354, or 15.7 per cent, occupancy of five to nine

NEGRO POPULATION.

years, and 165,560, or 19.8 per cent, occupancy of ten years and over. For each term of occupancy of less than five years a larger proportion of colored than of white farms was reported, the proportion reporting

occupancy of five to nine, and of ten years and over being larger for white than for colored farms (15.7 and 19.8 per cent for colored, as compared with 17.4 and 33 for white farms).

COLORED AND WHITE FARMS CLASSIFIED BY TERMS OF OCCUPANCY, BY SECTIONS AND SOUTHERN DIVISIONS: 1910.

The distribution by term of occupancy of colored farms does not vary materially from one southern division to another. In the North and West this distribution for colored farms approximates the distribution shown for white farms in these sections.

It may be noted that in the case of farmers reporting occupancy of less than one year the occupancy of the farmer reporting may or may not have covered the crop year 1909; and similarly in the case of farmers reporting occupancy of one year, the occupancy of the farmer may have covered either one or two crop years. The classification by occupancy therefore does not indicate accurately what proportion of the farmers reporting had grown crops on the farms which they were occu-

pying at the date of the census enumeration. In the case of some of the farmers reporting occupancy of less than one year reports of acreage in crops in 1909 would be for occupiers other than the farmer in occupancy at the time of census enumeration, and would on that account probably be somewhat less accurate than the reports made by other occupiers. In some few instances crops reported for colored farms may have been grown by white operators in 1909, and crops reported for white farms may have been grown by colored operators in 1909. It is, however, improbable that such inaccuracies materially affect the crop aggregates reported for all farms.

SECTION II.—STATISTICS FOR TENURE CLASSES.

DEFINITION OF TENURE.

The three main tenure classes distinguished in compilations of data for farms are "owners," "tenants," and "managers." In the more detailed classifications by tenure owners owning entire farm operated are distinguished from "part owners"—that is to say, from owners renting some of the land operated—and three classes of tenants, namely, "share," "cash," and "share-cash," are distinguished.

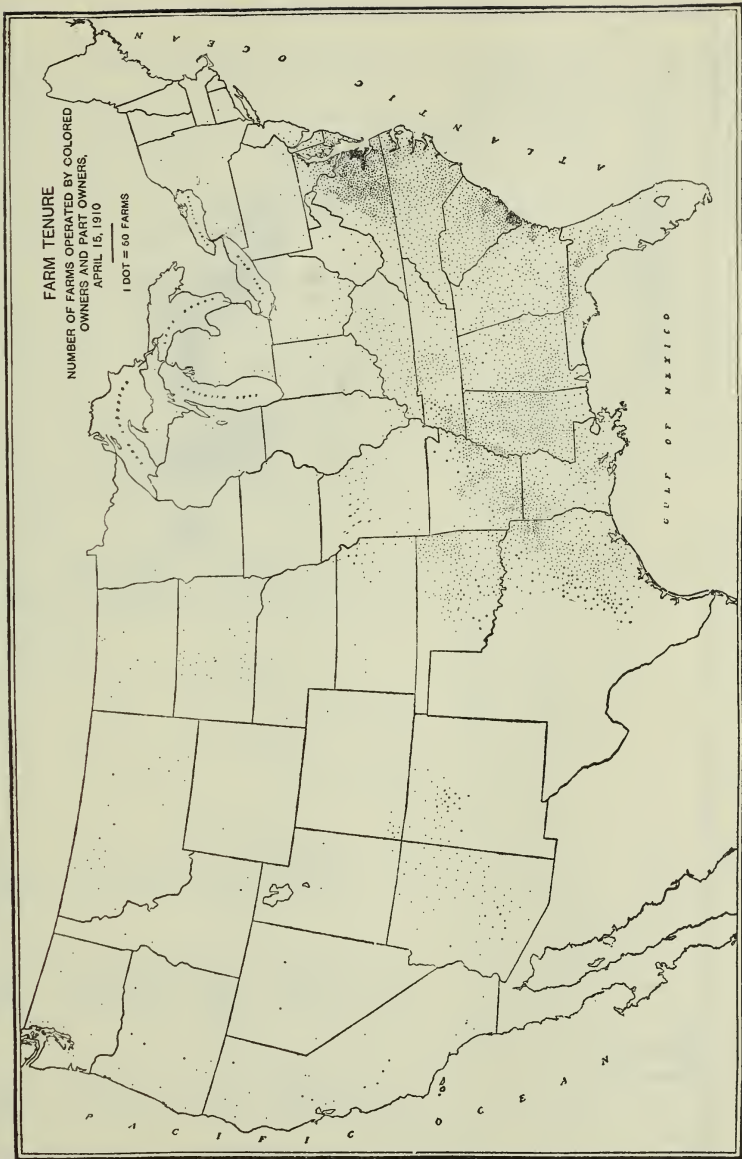

In instructions to enumerators in 1910, an owner is defined as "a person holding the title to all the land operated by him;" and a part owner as an operator

who "in addition to operating a farm owned by him, operates a tract of land that is leased by him from some one else." The several tenant classes are defined as follows:

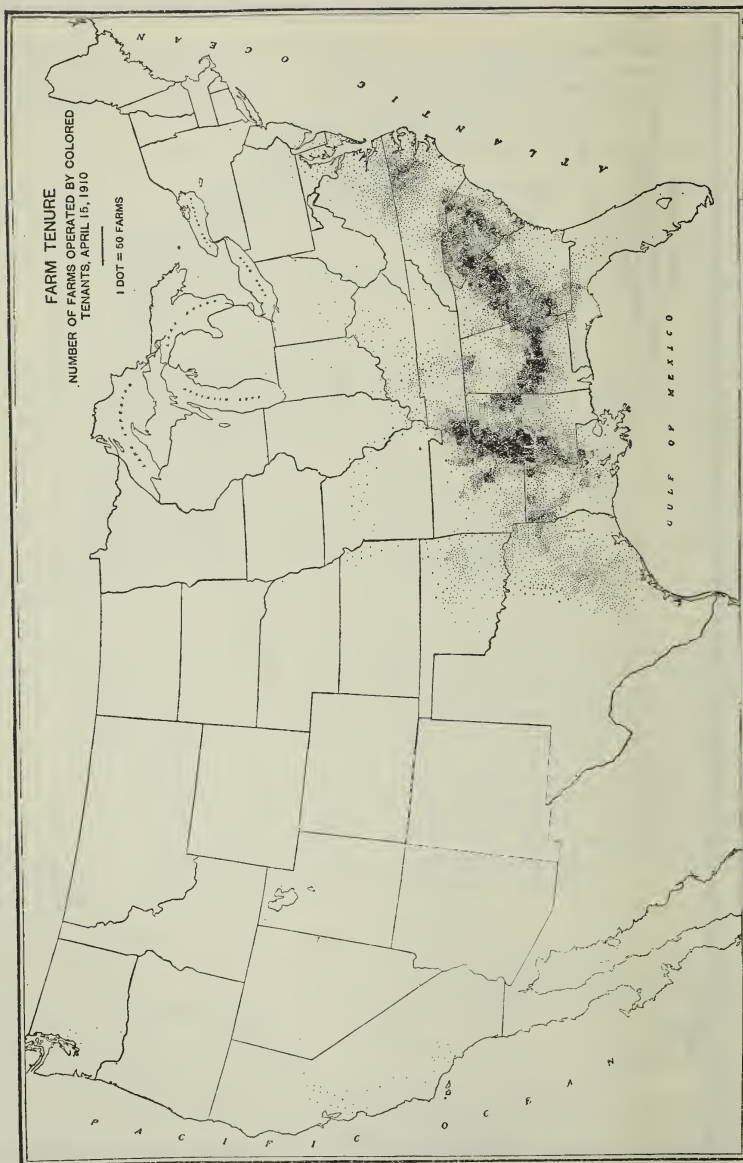

A tenant is a farm operator who leases all the land operated by him—

If he pays a proportionate share of the products or crops, say one-half or one-third, to the owner for the use of the land, then he is a *share-tenant* and should be so returned. But if (1) he pays a fixed rental in money, say \$200 a year, or (2) a stated amount of produce, say 100 bushels of wheat or 5 bales of cotton, or (3) if he agrees to work for the owner of the land a specified number of days, say two days every week, then in either case he is a *cash tenant*, and should be so returned. It should be noted, therefore, that the word

Map IV.

MAP V.

cash, as here used, means not necessarily money, but a definite and fixed amount of either money, produce, or labor, as the case may be, paid as rent.

It may happen that a tenant pays both kinds of rent. He may pay for a single tract of land both a fixed amount of money, produce, or labor, and a proportionate share of the crops, or he may rent one tract of land on one basis and another tract on the other basis. In both such cases he is to be returned as a *share-cash tenant*.

Owners owning entire farms operated are further distinguished according to the return of mortgage indebtedness, as "owners free" and "owners mortgaged."

Enumerators were instructed to report as managers, operators of farms operated for owners or for public institutions "by one who received wages or a salary for his services as manager, superintendent, or overseer."

These distinctions give, for the most detailed tabulations (see, for example, Tables 30 and 57) seven tenure classes—owners free, owners mortgaged, part owners, share tenants, cash tenants, share-cash tenants, and managers. In many of the tables, however, combinations of these classes have been made, where full detail by tenure has seemed relatively insignificant, or data for the minor tenure classes have not been available.

NUMBER OF FARMS IN EACH TENURE CLASS.

Farm operators in 1910, of all classes combined, and of Negroes, native whites, and foreign-born whites separately, are classified in Table 28 as owners, tenants, and managers.

TENURE.	FARM OPERATORS: 1910.

Managers.....	8,137	20	6,617	1,417	4.1	2.4	1.7

Of the 893,370 Negro farmers in 1910, 218,972 were returned as owners of the farms they were operating, 672,964 were returned as tenant farmers, and 1,434 as farm managers. Of the farms operated by Negro owners, 211,087 were in the South, 7,498 were in the North, and 387 were in the West.

Owned farms constituted 24.5 per cent of all Negro farms, the proportion owned by the operator being 1 in 4; of farms operated by native whites, 66.3 per cent, or 2 out of 3, were so owned; and of farms operated by foreign-born whites, 81.4 per cent, or 4 out of 5. In the South 24 per cent, in the North, 62.2 per cent, and in the West, 80.3 per cent of the Negro farms were owned, the percentage owned of Negro farms in the North and West being much higher than in the South, and approximating more nearly to the percentage owned of native white farms.

In the South 75.9 per cent, or 3 out of 4 Negro farmers, were tenants, the proportion in the North being 35.9 per cent or approximately 1 in 3 Negro farmers, and in the West 15.6 per cent or approximately 1 in 6 Negro farmers.

Managers constituted only 0.2 per cent of Negro farmers in the country as a whole, the proportion among white farmers, native and foreign-born, being 1 per cent. Per 1,000 Negro farmers in the South, 1 was returned as a manager, the number of managers per 1,000 native white farmers being 7, and per 1,000 foreign-born white farmers, 9. In the North and West there were more managers per 1,000 farmers among Negroes than among either native or foreign-born whites, the number of Negro farmers in these sections (12,052 in the North and 482 in the West) being, however, inconsiderable relatively to the number in the South (880,836), and relatively to the number of white farmers in the North (2,872,734) and West (360,479).

Table 29 introduces data for the year 1900 in comparison with data for 1910, as regards the number of Negro farm owners, managers, and tenants.

During the decade 1900-1910 the number of Negro farm owners increased from 187,797 in 1900 to 218,972 in 1910, the increase amounting to 31,175. Negro tenant farmers increased in the same period from 557,174 to 672,964, the increase amounting to 115,790.

It may fairly be assumed that these increases largely represent, in one case the advance of tenant farmers into the class of farm owners, and in the other the advance of farm laborers into the class of tenant farmers, although precise data are not available regarding the number of such changes. Even without any increase in the number of owners, obviously a considerable number of tenants might become owners during any period, the number of new owners recruited from the tenants merely offsetting in whole or in part the decrease by mortality or by abandonment of farming among owners, and similarly a considerable number of laborers might

NEGRO POPULATION.

enter the tenant class without developing any increase in the class of tenants, the new tenants offsetting the decrease of tenants by progression of tenants into the class of owners, by mortality, and by abandonment of farming. Both owners and tenants, as well as farm laborers, are undoubtedly recruited also directly from the nonfarming population, as may be inferred from the increasing proportion of farmers in the Negro population (see Table 2).

A minus sign (-) denotes decrease.

In the South there was practically no change during the decade in the relative number of owners and of tenants among Negro farm operators, the percentage in these classes being for owners 24.5 in 1900 and 24 in 1910, and for tenants 75.3 in 1900 and 75.9 in 1910. In the North and West the proportion of owners among Negro farmers increased—from 57.9 to 62.2 per cent in the North, and from 76.3 to 80.3 per cent in the West.

Table 30 classifies colored and white farm operators of the South in greater detail of tenure, distinguishing three classes of owners—owners free, owners mortgaged, and part owners—and three classes of tenants—cash tenants, share tenants, and share-cash tenants. While data have not been compiled in this detail of tenure for Negroes, data for the aggregate

colored in the South are, as has been noted, practically equivalent to data for Negroes.

The 43,177 colored farmers classified as part owners, i. e., owners farming some leased land in addition to land owned by them, constituted 4.9 per cent of the colored farmers in the South, the corresponding proportion for white farmers being 7.8 per cent. Cash tenants constituted 29.3 per cent of the colored and 8.7 per cent of the white farm operators. More than two-fifths of the colored farm operators were share tenants, the percentage in this class being 41.6 for colored operators and 27.7 for white operators. Share-cash tenants constituted only 1.6 per cent of colored operators and 1.2 per cent of white operators.

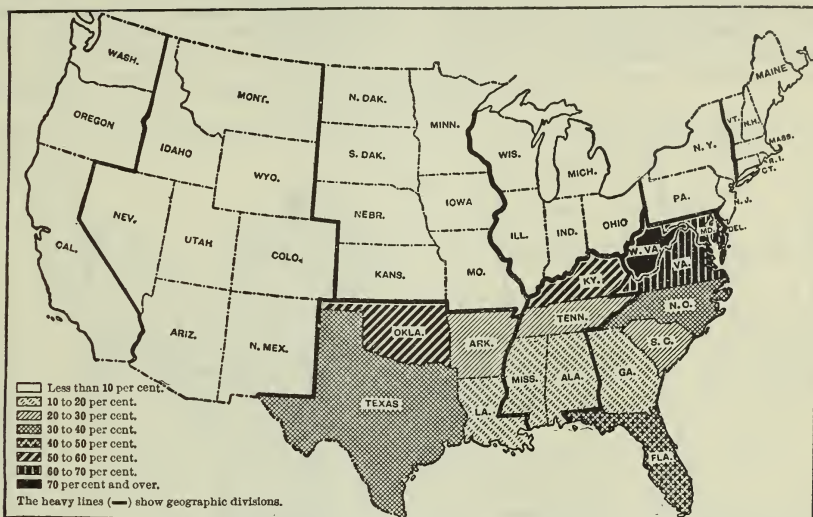

Statistics of the number of farms classified by tenure are given in the general tables, for divisions and states, as follows: Negro farms in 1910 and in 1900 are classified as operated by owners, tenants, and managers, in Table 54 (p. 607), which gives also the increase for each tenure class during the decade 1900-1910. Table 55 (p. 608) classifies farms of colored owners, tenants, and managers, in 1910, as operated by Negro and by other colored farmers. Table 56 (p. 609) classifies colored and white farmers of the South, in 1910 and 1900, as owners, part owners, share tenants, cash tenants, and managers. Table 57 (p. 610) classifies farms of colored and of white operators in the South in 1910, in full detail of tenure, distinguishing seven tenure classes of operators—owners free, owners mortgaged, part owners, cash tenants, share tenants, share-cash tenants, and managers—and giving the percentage distribution of farms in each state by this detail of tenure.

FARM ACREAGE UNDER EACH TENURE.

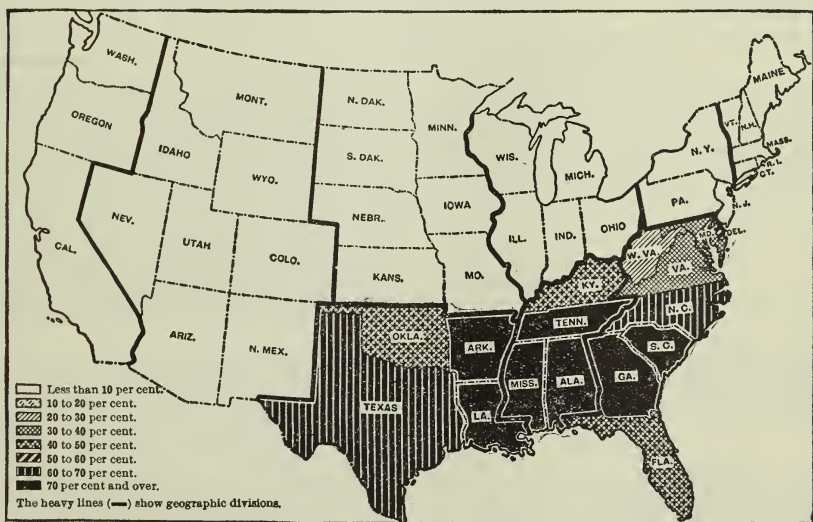

The number of acres in colored and white farms classified by tenure, distinguishing owners free, owners mortgaged, part owners, cash tenants, share and share-cash tenants, and managers, is given for

AGRICULTURE.

NEGRO POPULATION.

1910 in Table 58 (p. 612), with the percentage distribution of acreage by tenure. Similar data are given for acreage improved in Table 59 (p. 613). Total and improved acreage in colored farms of owners, managers, and tenants, in 1910 and in 1900 with aver-

age acres per farm, and percentage improved of land in farms, is given for southern divisions and states in Table 68 (p. 625). Acreage, total and improved, in colored farms is shown by tenure for southern counties in 1910, in Table 73 (pp. 698 to 764).

MAP VIII.—FARMS OF COLORED MANAGERS—PERCENTAGE OF ALL COLORED FARMS, BY STATES: 1910 (SOUTHERN STATES ONLY).

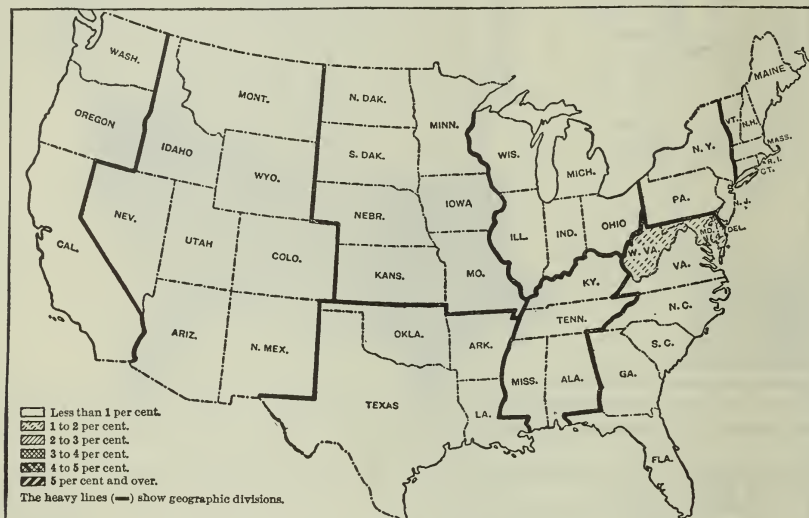

Table 31 distributes the total acreage and the improved acreage in colored and in white farms of the South in 1910 by tenure, giving the percentage distribution of these acreages by tenure, and the average number of acres per farm for each tenure class.

¹ Includes not specified tenure.

² Includes share-cash tenants.

More than one-third of the colored farm acreage in the South in 1910 was reported by colored owners and part owners; nearly one-third was reported by share tenants; and a slightly smaller proportion, by cash tenants. Of the total colored farm acreage in the South, 8,835,857 acres were owned free of mortgage debt, and 4,011,491 acres were owned under a mortgage. The 2,844,188 acres reported by part owners included some acreage operated under a lease. The total and the improved acreage owned by part owners is distinguished from the total acreage owned and leased, in the general table for counties (Table 73) cited above.

Owners, colored and white, reported a smaller proportion of improved than of total acreage. In the case of colored farmers, owners free reported 20.7 per cent of total and 14.5 per cent of the improved acreage, the corresponding percentages for whites being 43.2 and 41.3.

Managed farms of colored farmers averaged 291.5 acres per farm, mortgaged farms averaged 85.8 acres, farms owned free 68.7 acres, farms partly owned 65.9 acres, cash tenant farms 45 acres, and share tenant farms 35.6 acres.

In improved acreage, as in total acreage, the average acreage per farm of mortgaged farms, colored and white, exceeded that of farms owned free. The average acreage improved of colored farms owned free was slightly less than that of colored farms operated by cash tenants.

Colored operators of each tenure class, as compared

with white operators, reported on the average a much smaller acreage per farm, the excess of white over colored acreage being more marked in the averages for total than for improved land in farms.

In Table 32 acreage operated by colored tenants is distributed by tenant tenures, for sections and southern divisions in 1910.

In the South as a whole, nearly one-half (49.2 per cent) of the acreage on farms of colored tenant farmers was in farms of share tenants—that is, tenants renting under an agreement to pay “a proportionate share of the products or crops” as rent. Acreage operated under this tenure was relatively to the total acreage in tenant farms largest in the West South Central division, in which division more than two-thirds (69.4 per cent) of the colored acreage in tenant farms was rented on shares.

Cash tenants operated 44.1 per cent of the total acreage in colored tenant farms of the South, the proportion under this tenure being highest (56.1 per cent) in the East South Central division.

Table 33 distributes acreage, total and improved, reported by colored and by white farmers of the South as a whole, and of each southern division, in 1910 and in 1900, as in farms of owners, part owners, cash tenants, share tenants, and managers, giving the increase for the decade 1900-1910, the percentage improved at the beginning and at the end of the decade, and average acres per farm of all land and of land improved.

During the decade 1900-1910 the acreage in colored farms of owners in the South increased from 11,512,424 acres in 1900 to 12,847,348 acres in 1910, the increase amounting to 1,334,924 acres. Acreage reported by part owners increased by 997,928 acres, and acreage reported by share tenants by 1,909,024 acres. Cash tenant acreage in the same period decreased by 166,066 acres, and managed acreage by 78,739 acres.

While the increase of improved acreage for colored owners and part owners in the South was less than the increase in total acreage in such farms, the increase of

improved acreage for tenant farms was greater than the increase for total acreage in tenant farms. Cash tenant acreage of improved land in fact increased by 677,525 acres, although the total acreage in such farms decreased, as stated above, by 166,066 acres; and in the same period the increase of 2,358,790 acres in improved acreage for share tenant farms exceeded the increase of 1,909,024 acres in total acreage of share tenant farms by 449,766 acres. For each tenure class of colored and white farms, the percentage improved of the total land in farms increased.

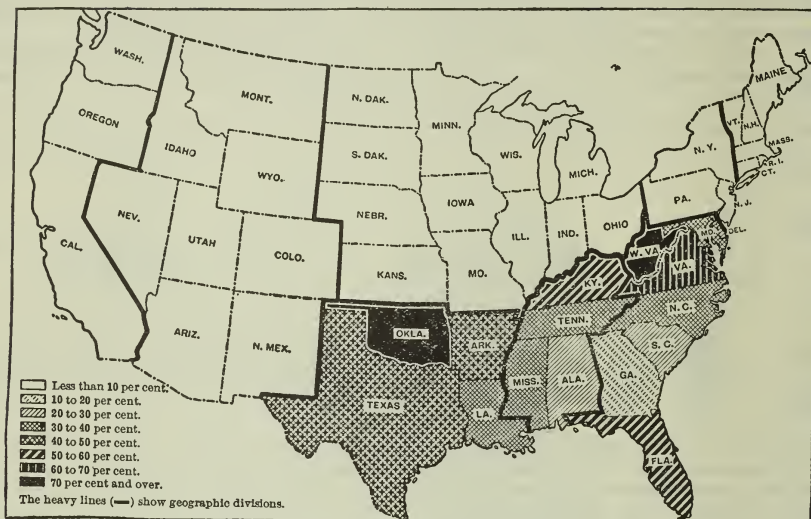

In the South Atlantic division the acreage in owned farms for colored owners increased by 826,505 acres, and for white owners decreased in the same period by 2,291,823 acres. In the East South Central division owned acreage increased for colored operators by 394,855 acres, and decreased for white operators by 2,460,832 acres. In the West South Central division owned colored acreage increased by 113,564 acres, and owned white acreage by 15,186,502 acres.

For colored farms of each tenure class, average size of farm and average acres improved per farm did not change materially during the decade. Average size increased slightly for colored owners and part owners, and more considerably for colored managers, and decreased for colored tenants, cash and share. Average acreage improved per farm increased for colored owners, part owners, cash tenants, and managers, and decreased for share tenants.

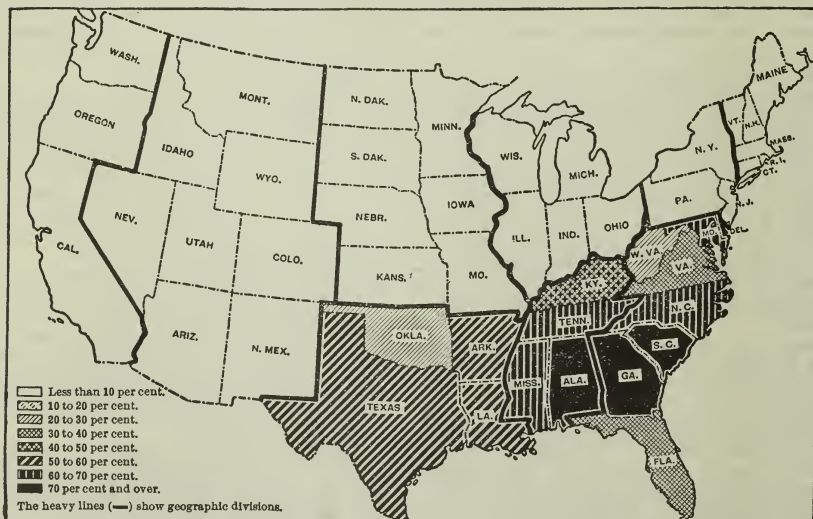

The average size of colored farms wholly owned by operators in the South Atlantic division was 56 acres, in the East South Central division 80 acres, and in the West South Central division 95.9 acres, the corresponding averages for white farms wholly owned being 131.7, 119.5, and 238.1 acres.

NEGRO POPULATION.

MAP IX.—LAND IN FARMS OF COLORED OWNERS—PERCENTAGE OF ALL LAND IN COLORED FARMS, BY STATES: 1910 (SOUTHERN STATES ONLY).

MAP X.—LAND IN FARMS OF COLORED TENANTS—PERCENTAGE OF ALL LAND IN COLORED FARMS, BY STATES: 1910 (SOUTHERN STATES ONLY).

AGRICULTURE.

577

Cash tenant farms of colored operators averaged 52.8 acres in the South Atlantic division, 39.6 acres in the East South Central division, and 41 acres in the West South Central division, the corresponding averages for white cash tenant farms being 87.6, 71.6, and 194.8 acres. In each division share tenant farms of

colored and of white farmers averaged smaller in size than cash tenant farms.

Tenant farms, cash and share, colored and white, in each southern division, averaged smaller in 1910 than in 1900, except for white share tenant farms in the West South Central division.

NEGRO POPULATION.

VALUE OF FARM PROPERTY BY TENURE OF FARM.

The following tables give values, by divisions and states, for farms classified by tenure: Table 60 (p. 614), the value of land in colored and white farms of the South in 1910; Table 61 (p. 616), similar data for the value of buildings; Table 62 (p. 618), similar data for the value of implements and machinery; Table 63 (pp. 625 and 626), in less detail by tenure, for colored farms in 1910 and in 1900, the combined value of land and buildings, with average value per farm and per

acre in farms; Table 69 (pp. 628 to 637), values of classes of live stock on farms.

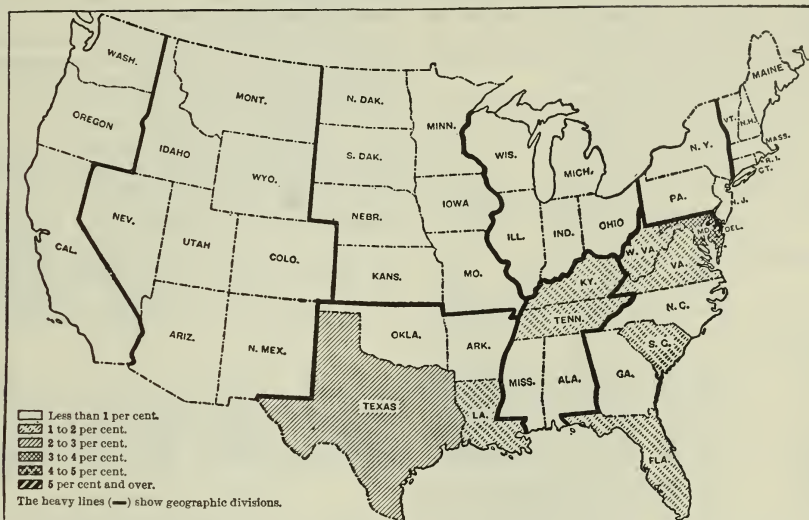

Aggregate values for colored and white farms of the South, of all farm property, and of each of the four classes of farm property distinguished—land, buildings, implements and machinery, and live stock—are given in Table 34, for tenure classes, covering the two years 1910 and 1900, with increases for the decade 1900-1910, percentage distribution of values by tenure of farm, and average values per farm in each tenure class.

VALUE OF CLASSES OF FARM PROPERTY ON COLORED AND WHITE FARMS, BY TENURE CLASSES, WITH DECENAL INCREASE, PERCENTAGE DISTRIBUTION BY TENURE, AND AVERAGE PER FARM: 1910 AND 1900.

MAP XI.—LAND IN FARMS OF COLORED MANAGERS—PERCENTAGE OF ALL LAND IN COLORED FARMS, BY STATES: 1910 (SOUTHERN STATES ONLY).

The value of farm property on owned colored farms of the South increased from \$123,754,396 in 1900 to \$275,323,227 in 1910, giving an increase for this class of farms of \$151,568,831. Farm property on partly owned colored farms increased from \$21,660,387 to \$71,558,043, giving an increase of \$49,897,656. On cash tenant farms the property value increased from \$166,766,057 to \$342,387,968, or by \$175,611,911; on share tenant farms, from \$168,466,783 to \$415,312,935, or by \$246,846,152; and on managed farms, from \$7,391,613 to \$12,059,403, or by \$4,667,790.

For all colored, as for all white farms of the South combined, and for each tenure class of farms, except farms operated by managers, the increase in value of farm property during the decade 1900-1910 exceeded the aggregate value of farm property on farms in 1900.

Similarly the increase during the decade in the value of land in colored farms of each tenure class, excepting manager farms, exceeded the aggregate land values reported for each class in 1900; the increase in the value of buildings for each tenure class of farms, without exception of managed farms, exceeded the value of buildings on such farms in 1900; and the increase in the value of live stock, with exception of owned farms and managed farms, exceeded the value of live stock on farms in 1900. The increase in the value of implements and machinery was, relatively to the values reported in 1900, generally less than the relative increase of other classes of farm property, although the value

of this class of property, also, increased rapidly during the decade—nearly doubling on owned colored farms.

Of the aggregate value of farm property on colored farms of the South (\$1,116,641,576), 24.7 per cent, or nearly one-fourth, was on owned farms in 1910, 30.7 per cent was on cash tenant farms and 37.2 per cent, on share tenant farms. The percentage distribution by tenure of farm property value in 1900 was not materially different from that of 1910. Owned colored farms in 1910 reported 22.6 per cent of the total land value of farms operated by colored farmers, 30.5 per cent of the value reported for buildings on colored farms, 32 per cent of the value of implements and machinery, and 26.4 per cent of the value of live stock. These proportions are below the corresponding proportions shown for white owners.

The average value per farm of all farm property on colored farms in 1910 was \$1,254; for colored owners, \$1,571; for part owners, \$1,657; for cash tenants, \$1,197; and for share tenants, \$1,080. As compared with corresponding averages for 1900, the averages for 1910 show increases of \$790 for owned farms, \$889 for partly owned farms, \$583 for cash tenant farms, and \$480 for share tenant farms.

Managers reported the largest average value per farm of all farm property (\$10,050), and of each class of property.

Excepting managers, mortgaged owners reported the largest average value for each class of farm property,

NEGRO POPULATION.

the values reported being for land \$1,118, for buildings \$297, for implements and machinery \$70, and for domestic animals \$292. Share tenants reported the smallest average values for each class of property—for land \$764, for buildings \$143, for implements and machinery \$23, and for live stock \$150.

Table 35 gives average values per farm and per acre in farms of farm property on colored and white farms of owners, tenants, and managers in the South in 1910 and in 1900, by southern divisions.

Average value of farm property on owned colored farms in the South Atlantic division increased during the decade from \$553 in 1900 to \$1,280 in 1910; in the East South Central division, from \$778 to \$1,570; and in the West South Central division, from \$1,152 to \$2,148. Average value of farm property on colored tenant farms increased in the South Atlantic division from \$558 to \$1,212; in the East South Central division, from \$601 to \$983; and in the West South Central division, from \$693 to \$1,251. The average property value of farms of colored managers more than doubled in the South Atlantic and East South Central divisions.

Per acre in farms, property values of colored owned and tenant farms in the South approximately doubled or more than doubled during the decade 1900-1910.

FARM ANIMALS BY TENURE OF FARM.

The number of dairy cows, work horses, and work mules, on colored and white farms of the South, classified by tenure, is given for southern divisions and states in Tables 63, 64, and 65 (pp. 620 to 622).

The number of colored and white farms reporting and not reporting domestic animals, horses, neat cattle, mules, hogs and pigs, sheep and lambs, asses and burros, goats and kids, poultry and bees, in 1910,

with value reported for each class of live stock, is given, by tenure classes, for southern divisions and states, in Table 69 (pp. 628 to 637).

The number of dairy cows, work horses, and work mules on colored farms, classified by tenure, is given in Table 73 (pp. 698 to 764) for southern counties.

Table 36 gives for colored and white farmers of the South, classified by tenure, the number of dairy cows, work horses, and work mules reported in 1910, with the percentage distribution, by tenure, and the average number of animals of each class per 100 farms.

* Includes not specified tenure.

* Includes share-cash tenants.

Per 100 farms, colored farmers reported the largest number of dairy cows, work horses, and work mules in 1910, and share tenants reported the fewest animals of these classes. The number of dairy cows reported by colored owners free per 100 farms was 164, by colored owners mortgaged 171, and by colored part owners 146, the corresponding figures for these classes of white owners being 255, 268, and 243; the number of work horses reported by these classes was 101, 99, and 97 for colored owners, and 168, 222, and 214 for white owners; the number of work mules 65, 95, and 86 for colored owners, and 94, 121, and 120 for white owners.

Number of farms reporting these classes of animals with number of animals reported, and average number per 100 farms, is given in Table 37, by tenure classes for southern divisions.

¹ Includes not specified tenure.

² Includes share-cash tenants.

Relatively to the number of farms in each tenure class, dairy cows, work horses, and work mules in 1910 were most numerous on farms of the West South Central division, the only exception being that more dairy cows per 100 farms were reported by colored managers

in the East South Central division than in either of the other southern divisions.

Number of farms reporting and not reporting these classes of animals in 1910 is shown for Southern states, by tenure, in Table 38.

In the South as a whole, 126,799 colored owners reported dairy cows and 48,291 owners did not report dairy cows, 101,570 owners reported and 73,720 did not report work horses, 73,319 owners reported and 101,971 did not report work mules.

Of colored cash tenants, 180,459 reported and 105,491 did not report dairy cows, and of share tenants 172,996 reported and 211,528 did not report this class of animals, the number of farms not reporting among share tenants exceeding the number reporting.

Among colored owners, part owners, and managers in the South, the number of farms reporting exceeded the number not reporting work horses. Among col-

ored owners, part owners, share tenants, and managers, the number of farms not reporting exceeded the number reporting work mules, and among cash tenants, the number reporting exceeded the number not reporting mules.

Dairy cows were reported by a majority of colored farmers in each southern division and in each Southern state, excepting North Carolina and Florida; work horses were reported by a majority of colored farmers in Delaware, Maryland, Virginia, West Virginia, Florida, Kentucky, Tennessee, Louisiana, Oklahoma, and Texas. In Alabama 28,453 colored farmers reported and 81,990 did not report work horses, and in

Mississippi 59,104 reported and 105,633 did not report. A majority of the colored farms in these two states and in South Carolina, Arkansas, and Texas reported work mules.

CROPS BY TENURE OF FARM.

Acres in corn on colored and white farms of the South, classified by tenure, are given for the crop year 1909, by divisions and states, in Table 66 (p. 623), and acres in cotton, in Table 67 (p. 624), with percentage distribution of these acreages by tenure of farms. Acreage and yield of these two crops on colored farms, classified by tenure, are given, for southern counties, in Table 73 (pp. 698 to 764).

Acreages of corn and cotton in the South in 1909 on colored and white farms are distributed, by tenure, in Table 39, which gives also the percentage on colored farms of the total acreage reported by each tenure class.

¹ Includes not specified tenure. ² Includes share-cash tenants.

Of the 7,377,221 acres in corn on colored farms of the South in 1909, 2,861,607, or 38.8 per cent, were on share tenant farms, and of the 12,096,638 acres in cotton, 5,104,042, or 42.2 per cent, were on share tenant farms. Somewhat smaller proportions of these acreages were on cash tenant farms. Tenants, cash and share combined, reported approximately two-thirds of the corn acreage and four-fifths of the cotton acreage. White tenants reported less than two-fifths of the corn and less than half of the cotton acreage on white farms in the South.

Of the corn acreage reported by each tenure class, the percentage on colored farms ranged from 4.4 for managed farms to 42.7 for cash tenant farms, and of the cotton acreage, from 5.7 for managed farms to 66.9 for cash tenant farms.

The number of farms reporting corn, average acres in corn per farm reporting, and average yield in bushels per acre planted are given, by tenure of farm, for southern divisions and states, in Table 40, and number of farms reporting cotton, with average acreage and yield per farm reporting cotton, in Table 41.

Oklahoma reported in 1909 the largest average acreage in corn (23.6 acres) for colored farms, and South Carolina the smallest (7.7 acres). Texas reported the largest average acreage in cotton (23.1 acres), the average for Georgia being only slightly less (22.8 acres). Of the states from which cotton was reported on colored farms, Virginia reported the smallest average acreage per farm (4.3 acres).

Among colored owners free, average acreages in corn ranged from 5.2 acres in Delaware to 24.5 acres in Oklahoma; among owners mortgaged, from 6.5 for Maryland to 27.9 for Oklahoma; among part owners, from 8.7 in South Carolina to 34 in Oklahoma; among cash tenants, from 7.2 in Arkansas to 19.8 in Oklahoma; among share tenants, from 6.7 in Arkansas to 32.1 in West Virginia; and among managers, from 8.5 in Texas to 44.1 acres in Louisiana.

Average yield per acre planted was generally larger on managed farms than on farms of any other tenure, ranging from 11.6 bushels in Oklahoma to 41.6 bushels in Maryland. On farms owned free, yield of corn per acre ranged from 10.3 bushels in Alabama to 24 bushels in West Virginia; on cash tenant farms, from 9.3 bushels in Georgia to 25.3 bushels in Kentucky; on share tenant farms, from 10.7 bushels in Alabama to 25.8 bushels in Kentucky.

Average acreage in cotton per farm in states reporting cotton on colored farms was lowest in Virginia for each tenure class, except managers. It was highest for owners free in Georgia and Texas (18.2 acres); highest for owners mortgaged, part owners, share tenants, and managers in Texas (the averages being 25.9, 25.1, 24.4, and 40.5 acres, respectively); and highest for cash tenants in Oklahoma (22.5 acres).

Average yield in bales per farm reporting cotton was lowest in Virginia which, as noted above, reported the smallest average acreage in cotton for colored farms reporting cotton. Average yield per farm was highest for colored owners free in Arkansas (4.7 bales); for owners mortgaged and for part owners in Georgia (8.7 and 8.1 bales, respectively); for cash and for share tenants in Kentucky (10.6 and 9.5 bales, respectively); and for managers in Alabama (26.1 bales).

TERM OF OCCUPANCY AND TENURE OF FARMS.

Term of occupancy and tenure of farms is shown for colored farms in all divisions and states in Table 70 (pp. 638 to 641).

Summary totals for colored and white farms in the South are given in Table 42, with the percentage distribution of farms in each tenure class, by term of occupancy.

Of the 128,557 colored owners in the South, only 2,808, or 2.2 per cent, reported occupancy of less than 1 year. The percentage reporting less than 1 year of occupancy among mortgaged owners was 4.1; among part owners, 8.1; among cash tenants, 17.7; among share tenants, 33.9; and among managers, 17.3. Of colored share tenants, 15.5 per cent reported occupancy of 1 year and 28.2, occupancy of 2 to 4 years. Thus less than one-sixth of the colored share tenants were operating farms in 1910, which they had occupied for a period of 5 years or more.

Of colored owners free, 17.7 per cent reported occupancy of 5 to 9 years and 46.3 per cent, occupancy of 10 years and over. The corresponding proportions

for owners mortgaged were 20.6 and 35.2 per cent, and for part owners, 20.8 and 33.9 per cent.

Approximately one-third of the cash tenants reported occupancy of 2 to 4 years, the proportion reporting shorter terms of occupancy being greater than the corresponding proportion for owners and less than the corresponding proportion for tenants and managers.

It appears from these figures that occupancy among colored farmers is much less permanent among share tenants than it is among cash tenants or owners, and this is true also of white farm operators in the South. Of white share tenants, 42.6 per cent reported occupancy of less than 1 year, the proportion reporting this short term of occupancy being greater for white than for colored share tenants. Occupancy of 1 year was reported by 17.3 per cent of white share tenants and occupancy of 2 to 4 years, by 24.6 per cent, the proportion reporting occupancy of 5 years or more being approximately one-tenth. Of white owners free, 17.7 per cent reported occupancy of 5 to 9 years and 44.5 per cent, occupancy of 10 years and over. In general occupancy was somewhat less permanent among white operators, of both owner and tenant classes, than among colored operators, the proportion of operators in each tenure class reporting short-term occupancy being greater and the proportion reporting long-term occupancy, smaller among white than among colored operators. Owing to the larger proportion of tenants among colored operators, however, the proportion of colored operators as a whole reporting short-term occupancy was greater and the proportion reporting occupancy of 10 years and over was less than among white operators.

Table 43 gives, for the three-southern divisions, the percentage distribution of each tenure class of colored farmers, by term of occupancy, and the percentage distribution, by tenure of operators, reporting each term of occupancy.

Among colored share tenants the proportion reporting occupancy of less than 1 year was 32 per cent in the South Atlantic division, 37.2 per cent in the East South Central division, and 32.3 per cent in the West South Central division. Such tenants constituted 66.7 per cent, or two-thirds, of all colored operators reporting occupancy of less than 1 year in the South Atlantic division, 64.7 per cent of those reporting less than 1 year in the East South Central division, and 78.5 per cent of those reporting less than 1 year in the West South Central division. In each division the proportion of share tenants among colored farm operators, classified by term of occupancy, declines as term of occupancy lengthens. In the South Atlantic division the decline is from 66.7 per cent among operators

NEGRO POPULATION.

reporting less than 1 year to 12.4 per cent among operators reporting 10 years and over. The corresponding decline in the East South Central division is from 64.7 to 14.9 per cent, and in the West South Central division, from 78.5 to 23 per cent.

The proportion of owners free, owners mortgaged, and part owners in each southern division increases

with term of occupancy, for owners free, for example, in the South Atlantic division from 1.8 among operators reporting less than 1 year to 47.8 among those reporting 10 years and over; in the East South Central division, from 2.1 to 47 per cent; and in the West South Central division, from 2.9 to 43.1 per cent.

In each division the proportion of cash tenants is highest among operators reporting terms of occupancy of 2 to 4 or 5 to 9 years, declining among operators reporting 10 years and over. The decline in the proportion of tenants, cash and share, among long-term occupiers may result from the advance of tenants into the class of owners.

It should be remarked that the term of occupancy reported by an operator does not necessarily apply to his tenure. An owner reporting occupancy of 10 years, for example, may have been during 9 years, or during any portion of his occupancy, a cash or share tenant or a manager of the farm he was operating as an owner at the time of the census enumeration. In such a case the entire period of occupancy, whether as tenant, manager, or owner, is credited to the operator classified as an owner.

MORTGAGE INDEBTEDNESS OF OWNED FARMS.

The mortgage indebtedness of farms wholly owned by colored operators in 1910 is given in Table 44, for southern divisions and states.

Of the 218,467 farms of colored owners in the South, 152,426, or 69.8 per cent, were owned free of mortgage debt, 59,662 were mortgaged, and for 6,379, or 2.9 per cent, no report regarding mortgage indebtedness was made.

Data regarding amount of mortgage debt of partly owned farms have not been compiled. The number of mortgaged colored farms, consisting of owned land only, numbered 41,432 in 1910. The aggregate value of land and buildings upon those farms was \$59,865,633 and the aggregate amount of mortgage debt, \$16,953,463, or 28.3 per cent of the realty value of the farms.

Of all farms owned by colored operators in 1910, the percentage mortgaged ranged, by states, from 14 in West Virginia to 45.5 in Mississippi. For mortgaged farms wholly owned by colored operators the proportion of mortgage debt to realty value of the farm ranged, by states, from 20.2 per cent in Oklahoma to 33.8 per cent in Alabama.

STATISTICS BY TENURE FOR SOUTHERN COUNTIES.

Table 73 (pp. 698 to 764) gives, for southern counties reporting 100 or more colored farmers in 1910, general statistics for colored farms, classified by tenure. The table includes, also, as has been noted, a classification of colored farms, by size, without distinction of tenure for the size classes.

By a combination of the data shown in this table, averages per farm and per acre, corresponding to those shown for states in the preceding sections of this chapter, may be obtained for counties, in detail of tenure for colored owners free, owners mortgaged, part owners, cash tenants, and share tenants.

For each of these tenure classes is given, by counties, the number of farms; total acreage; acreage improved; value of land, of buildings, and of implements and machinery; number of dairy cows, of work horses, and of work mules; and acreage and yield of cotton, and of corn in 1909. For part owners, owned acreage is shown separately from total acreage, owned improved acreage, separately from total improved acreage, and value of land and buildings owned, separately from total values of land and of buildings. Total and improved farm acreage, and acreage and yield of cotton

and of corn in 1909 are given, with other totals, in Table 72 (pp. 674 to 697) for colored and white farms.

From these figures for any given county the following percentages and averages relating to colored farms may be obtained: The percentage distribution of farms, and of the acreages, values, animals, and crop acreages and yields noted above, by tenure, and for each of the tenure classes specified—average acreage per farm; average acreage improved per farm; percentage of farm land improved; average value of land, of buildings, and of implements and machinery per farm, and per acre, of total and of improved land in farms; average number of dairy cows, of work horses, and of work mules per farm; average acreage in cotton and in corn, per farm; average yield of these crops per farm and per acre planted; percentage of total and of improved farm acreage in these crops. For partly owned farms the percentage owned of total and of improved acreage and of the combined value of land and buildings may be obtained.

Table 73 thus gives, by counties, for colored farms—in addition to the classification of farms by size—70 independent items carrying the distinction of tenure, from which approximately 175 derived averages and percentages, such as have been specified, may be obtained for each southern county shown.

* Correction of an error in West Virginia has reduced the number of managers by 1, as compared with figures previously published.
 † The total for the white farmers of the South includes \$240 not distributed by tenure, which represents value of animals (Belgian hares, ostriches, etc.) not shown separately in this table. Of this total \$10 are included in the total for the South Atlantic division, \$300 in the total for the East South Central division, and \$190 in the total for the West South Central division.

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

		ALABAMA—continued.									
		Fayette.	Frank- lin.	Geneva.	Greene.	Hale.	Henry.	Houston.	Jackson.	Jefferson.	Lamar
1	Number of farms.....	309	118	365	3,536	3,533	1,574	853	394	462	520
FARMS CLASSIFIED BY SIZE.											
2	Under 3 acres.....	4	5	6	356	301	29	30	17	5	7
3	3 to 9 acres.....	63	13	13	620	615	39	47	71	112	72
4	10 to 19 acres.....	152	63	216	1,816	1,839	886	522	224	158	220
5	20 to 49 acres.....	39	20	80	501	494	367	181	60	44	100
6	50 to 99 acres.....	1	1	4	148	146	147	54	14	10	83
7	100 to 174 acres.....	4	1	4	60	44	51	10	5	3	22
8	175 to 259 acres.....	10	2	4	47	26	46	7	2	1	3
9	260 to 499 acres.....	10	2	4	6	3	9	2	1	1	3
10	500 to 999 acres.....	1	1	1	2	4	4	1	1	1	1
11	1,000 acres and over.....	1	1	1	2	4	4	1	1	1	1
FARMERS CLASSIFIED BY TENURE.											
12	Owners, free.....	43	12	54	163	224	64	73	38	175	103
13	Owners, mortgaged.....	26	38	34	106	146	38	24	50	22	85
14	Part owners.....	20	4	6	54	146	38	24	50	31	37
15	Cash tenants.....	8	35	71	2,676	1,941	737	367	19	102	63
16	Share tenants.....	211	65	176	395	994	610	320	263	83	228
17	Share-cash tenants.....	1	2	2	22	3	9	3	1	8	8
18	Tenure not specified.....	1	1	1	3	59	15	16	2	16	3
19	Managers.....	1	1	1	2	3	3	1	2	2	2
FARMS OPERATED BY OWNERS, FREE.											
20	Total acreage.....	5,378	1,349	4,096	15,929	16,670	8,172	6,105	3,143	4,955	13,243
21	Improved acreage.....	1,560	711	2,035	7,719	8,213	3,892	3,420	1,151	2,578	4,247
22	Value of land.....	\$25,516	\$16,150	\$52,450	\$147,864	\$200,436	\$59,781	\$78,555	\$32,440	\$221,405	\$99,015

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

		GEORGIA—continued.									
		Burke.	Butts.	Calhoun.	Camden.	Campbell.	Carroll.	Chatham.	Chattahoochee.	Chattooga.	Cherokee.
1	Number of farms.....	3,261	928	1,139	511	524	913	225	479	336	117
FARMS CLASSIFIED BY SIZE.											
2	Under 3 acres.....
3	3 to 9 acres.....
4	10 to 19 acres.....
5	20 to 49 acres.....
6	50 to 99 acres.....
7	100 to 174 acres.....
8	175 to 259 acres.....
9	260 to 499 acres.....
10	500 to 999 acres.....
11	1,000 acres and over.....
FARMERS CLASSIFIED BY TENURE.											
12	Owners, free.....
13	Owners, mortgaged.....
14	Part owners.....
15	Cash tenants.....
16	Share tenants.....
17	Share-cash tenants.....
18	Tenure not specified.....
19	Managers.....
FARMS OPERATED BY OWNERS, FREE.											
20	Total acreage.....
21	Improved acreage.....
22	Value of land.....
23	Value of buildings.....
24	Value of implements and machinery.....
25	Number of dairy cows.....
26	Number of work horses.....
27	Number of work mules.....
28	Acreage in cotton.....
29	Bales of cotton grown in 1909.....
30	Acreage in corn.....
31	Bushels of corn grown in 1909.....
FARMS OPERATED BY OWNERS, MORTGAGED.											
32	Total acreage.....
33	Improved acreage.....
34	Value of land.....
35	Value of buildings.....
36	Value of implements and machinery.....
37	Number of dairy cows.....
38	Number of work horses.....
39	Number of work mules.....
40	Acreage in cotton.....
41	Bales of cotton grown in 1909.....
42	Acreage in corn.....
43	Bushels of corn grown in 1909.....
FARMS OPERATED BY PART OWNERS.											
44	Total acreage.....
45	Owned acreage.....
46	Improved acreage.....
47	Owned improved acreage.....
48	Value of land.....
49	Value of buildings.....
50	Value of implements and machinery.....
51	Number of dairy cows.....
52	Number of work horses.....
53	Number of work mules.....
54	Acreage in cotton.....
55	Bales of cotton grown in 1909.....
56	Acreage in corn.....
57	Bushels of corn grown in 1909.....
FARMS OPERATED BY SHARE AND SHARE-CASH TENANTS.											
58	Total acreage.....
59	Improved acreage.....
60	Value of land.....
61	Value of buildings.....
62	Value of implements and machinery.....
63	Number of dairy cows.....
64	Number of work horses.....
65	Number of work mules.....
66	Acreage in cotton.....
67	Bales of cotton grown in 1909.....
68	Acreage in corn.....
69	Bushels of corn grown in 1909.....
FARMS OPERATED BY SHARE AND SHARE-CASH TENANTS.											
70	Total acreage.....
71	Improved acreage.....
72	Value of land.....
73	Value of buildings.....
74	Value of implements and machinery.....
75	Number of dairy cows.....
76	Number of work horses.....
77	Number of work mules.....
78	Acreage in cotton.....
79	Bales of cotton grown in 1909.....
80	Acreage in corn.....
81	Bushels of corn grown in 1909.....

* Less than 1 bale.

AGRICULTURE.

OPERATED BY COLORED FARMERS, BY COUNTIES, FOR SOUTHERN STATES: 1910—Continued.

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

		GEORGIA—continued.									
		Terrell.	Thomas.	Tift.	Toombs.	Troup.	Turner.	Twiggs.	Upson.	Walker.	Walton.
1	Number of farms.	2,098	1,459	229	350	1,978	374	1,063	901	233	1,351
FARMS CLASSIFIED BY SIZE.											
2	Under 3 acres.	1	5	1	1	47	5	48	14	18	38
3	3 to 9 acres.	23	58	14	3	89	14	29	46	49	115
4	10 to 19 acres.	38	168	28	31	99	14	54	66	49	115
5	20 to 49 acres.	1,321	897	179	201	927	241	594	352	106	761
6	50 to 99 acres.	522	265	40	67	512	89	231	216	43	325
7	100 to 174 acres.	143	109	12	27	277	18	105	168	18	95
8	175 to 259 acres.	37	30	3	15	70	5	31	69	2	13
9	260 to 499 acres.	11	16	2	1	28	2	22	25	2	4
10	500 to 999 acres.	3	4	1	1	10	1	3	10	1	4
11	1,000 acres and over.	3	4	1	1	4	1	1	1	1	4
FARMERS CLASSIFIED BY TENURE.											
12	Owners, free.	85	243	23	37	35	13	68	44	29	49
13	Owners, mortgaged.	24	93	6	14	12	17	12	24	22	12
14	Part owners.	13	59	15	12	14	5	12	14	11	18
15	Cash tenants.	533	603	39	73	883	109	835	519	4	391
16	Share tenants.	1,452	454	110	209	941	224	919	288	144	337
17	Share-cash tenants.	7	10	22	2	14	4	4	7	15	6
18	Tenure not specified.	13	26	13	3	12	6	12	8	6	29
19	Managers.	1	1	1	1	1	1	1	1	1	1
FARMS OPERATED BY OWNERS, FREE.											
20	Total acreage.	5,018	19,854	619	2,203	6,819	504	7,135	7,122	1,674	4,540
21	Improved acreage.	3,143	10,055	342	870	3,553	262	3,554	3,731	824	2,974
22	Value of land.	\$7,130	\$20,114	\$14,470	\$32,285	\$97,900	\$13,175	\$62,290	\$57,209	\$17,843	\$13,446

NEGRO POPULATION.

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

		KENTUCKY—continued.									
		Darren.	Bourbon.	Boyle.	Caldwell.	Christian.	Davies.	Fayette.	Fulton.	Garrard.	Graves.
1	Number of farms.	496	113	104	150	878	256	107	228	280	224
FARMS CLASSIFIED BY SIZE.											
2	Under 3 acres.	1	1	1	1	4	1	25	10	6	14
3	3 to 9 acres.	71	39	33	48	94	42	25	30	70	67
4	10 to 19 acres.	132	29	38	48	236	81	26	30	70	67
5	20 to 49 acres.	203	34	16	65	353	70	34	149	71	102
6	50 to 99 acres.	70	4	12	19	106	38	13	32	16	31
7	100 to 174 acres.	14	5	15	68	19	4	6	9	3	9
8	175 to 259 acres.	2	1	2	20	4	3	1	1	1	1
9	260 to 999 acres.	2	1	2	7	7	1	2	1	1	1
10	500 to 999 acres.	2	1	2	7	7	1	2	1	1	1
11	1,000 acres and over.	2	1	2	7	7	1	2	1	1	1
FARMS CLASSIFIED BY TENURE.											
12	Owners, free.	182	19	62	28	171	58	20	4	63	35
13	Owners, mortgaged.	37	5	5	8	60	18	9	5	31	14
14	Part owners.	60	32	16	15	73	27	42	2	35	17
15	Cash tenants.	7	4	7	3	6	6	5	4	1	5
16	Share tenants.	208	41	17	103	499	143	26	164	92	147
17	Share-cash tenants.	2	7	1	2	2	2	1	1	2	1
18	Tenure not specified.	9	1	2	1	3	2	2	4	2	4
19	Managers.	1	1	2	1	3	1	3	2	1	1
FARMS OPERATED BY OWNERS, FREE.											
20	Total acreage.	6,505	384	1,127	1,979	7,734	4,000	191	92	1,163	1,807
21	Improved acreage.	5,105	378	1,127	1,719	5,711	3,567	183	85	838	1,340
22	Value of land.	\$105,848	\$31,625	\$21,575	\$21,230	\$88,925	\$125,415	\$20,912	\$3,250	\$43,510	\$29,430

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

		LOUISIANA—continued.									
		St. Mary.	Tangipahoa.	Tensas.	Union.	Vermilion.	Wash- ington.	Webster.	West Baton Rouge.	West Carroll.	West Felicians.
1	Number of farms.....	218	436	2,729	776	314	426	1,033	340	432	1,281
FARMS CLASSIFIED BY SIZE.											
2	Under 3 acres.....	2	86	482	20	22	7	24	44	28	177
3	3 to 9 acres.....	53	86	1,783	51	31	44	165	187	187	374
4	10 to 19 acres.....	39	122	1,542	618	283	148	239	471	117	634
5	20 to 49 acres.....	67	130	618	283	148	239	471	117	165	634
6	50 to 99 acres.....	43	53	63	199	86	69	209	20	37	80
7	100 to 174 acres.....	13	37	20	171	22	46	170	3	17	20
8	175 to 259 acres.....	2	3	4	45	3	14	41	1	6	7
9	260 to 499 acres.....	1	2	3	22	2	6	28	2	2	5
10	500 to 999 acres.....	1	1	6	1	1	1	3	1	1	2
11	1,000 acres and over.....	1	1	1	1	1	1	1	1	1	1
FARMERS CLASSIFIED BY TENURE.											
12	Owners, free.....	74	175	46	173	67	149	233	32	56	34
13	Owners, mortgaged.....	17	45	14	130	23	36	42	27	23	17
14	Part owners.....	57	19	8	49	4	9	4	98	2	4
15	Cash tenants.....	6	113	37	492	67	92	226	187	108	415
16	Share tenants.....	52	84	2,166	351	164	123	423	71	226	792
17	Share-cash tenants.....	7	11	14	3	4	20	3	18	1	2
18	Tenure not specified.....	7	88	8	7	13	8	3	1	17	17
19	Managers.....	5	2	1	1	1	1	1	1	1	1
FARMS OPERATED BY OWNERS, FREE.											
20	Total acreage.....	1,021	7,307	5,057	20,672	3,149	12,678	26,079	734	3,940	5,106
21	Improved acreage.....	878	2,377	1,783	9,034	2,378	4,800	11,062	574	1,720	2,013
22	Value of land.....	\$56,315	\$30,410	\$118,393	\$99,691	\$112,328	\$117,530	\$158,542	\$29,810	\$67,140	\$48,828
23	Value of buildings.....	\$34,252	\$40,250	\$29,295	\$41,395	\$14,797	\$54,765	\$71,525	\$16,800	\$18,350	\$8,140

NEGRO POPULATION.

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

	MISSISSIPPI—continued.							NORTH CAROLINA.		
	Wayne.	Webster.	Wilkinson.	Winston.	Yalobusha.	Yazoo.	All other counties.	The state.	Alamance.	Alexander.
1 Number of farms.....	662	583	1,979	1,142	1,704	6,714	380	65,656	593	125
FARMS CLASSIFIED BY SIZE.										
2 Under 3 acres.....	1	1	158	1	18	2	13	32	1
3 3 to 9 acres.....	64	85	117	499	182	273	778	5,296	52	13
4 10 to 19 acres.....	215	252	1,024	479	849	1,745	1,115	10,920	75	37
5 20 to 49 acres.....	279	398	1,733	243	325	583	62	29,250	157	42
6 50 to 99 acres.....	107	175	79	173	243	325	62	12,197	152	23
7 100 to 174 acres.....	79	79	43	147	175	178	68	5,668	114	9
8 175 to 259 acres.....	20	21	22	36	34	45	10	1,447	37	1
9 260 to 499 acres.....	10	5	10	32	25	32	7	677	5
10 500 to 999 acres.....	1	1	5	4	4	10	4	139	3
11 1,000 acres and over.....	1	1	5	1	1	2	1	30	1
FARMS CLASSIFIED BY TENURE.										
12 Owners, free.....	192	79	125	133	154	220	308	11,088	141	26
13 Owners, mortgaged.....	105	57	65	235	103	190	14	3,734	57	15
14 Part owners.....	68	36	13	91	28	47	9	6,621	81	4
15 Cash tenants.....	179	58	105	40	30	378	8	10,110	9
16 Share tenants.....	98	359	1,641	589	890	2,875	23	31,609	304	39
17 Share-cash tenants.....	2	8	3	2	2	18	15	921	1
18 Tenure not specified.....	18	6	26	2	2	93	68	1,499	2
19 Managers.....
FARMS OPERATED BY OWNERS, FREE.										
20 Total acreage.....	14,686	8,459	14,156	14,969	17,960	21,730	23,366	604,292	5,486	1,007
21 Improved acreage.....	3,190	3,960	5,494	10,498	8,123	8,007	3,089	236,163	2,719	435
22 Value of land.....	\$89,463	\$57,700	\$88,474	\$111,427	\$151,140	\$387,455	\$166,050	\$7,914,466	\$90,240	\$11,234
23 Value of buildings.....	\$43,109	\$13,860	\$23,083	\$42,355	\$80,520	\$124,035	\$95,440	\$3,007,544	\$42,560	\$2,316

NEGRO POPULATION.

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

	NORTH CAROLINA—continued.										
	Lee.	Lenoir.	Lincoln.	Mc-Dowell.	Martin.	Mecklenburg.	Montgomery.	Moore.	Nash.	New Hanover.	
1 Number of farms.....	335	816	311	160	779	1,751	343	406	1,539	174	
FARMS CLASSIFIED BY SIZE.											
2 Under 3 acres.....						1			1		
3 3 to 9 acres.....	32	75	21	29	31	54	53	62	83	40	
4 10 to 19 acres.....	55	127	57	21	119	218	34	91	268	41	
5 20 to 49 acres.....	106	456	134	59	354	873	141	110	752	58	
6 50 to 99 acres.....	79	109	72	32	166	401	70	88	283	17	
7 100 to 174 acres.....	39	35	23	13	74	179	28	41	123	11	
8 175 to 259 acres.....	15	8	3	4	18	19	10	21	17	4	
9 260 to 499 acres.....	6	3	1	2	10	5	6	7	10	1	
10 500 to 999 acres.....	3	3			4		1	5	1	1	
11 1,000 acres and over.....									2	1	
FARMERS CLASSIFIED BY TENURE.											
12 Owners, free.....	70	24	43	78	148	89	59	131	120	75	
13 Owners, mortgaged.....	13	12	12	4	11	31	19	23	19	7	
14 Part owners.....	48	18	52	28	59	41	54	62	65	26	
15 Cash tenants.....	112	77	7	21	328	64	14	327	24	24	
16 Share tenants.....	86	694	192	49	325	1,196	116	127	552	16	
17 Share-cash tenants.....	4	12	1		22	40	1	6	12	13	
18 Tenure not specified.....	3	2	4		68	19		2	10	11	
19 Managers.....					2	2		1	2	1	
FARMS OPERATED BY OWNERS, FREE.											
20 Total acreage.....	3,334	1,518	1,533	3,306	11,047	4,630	2,100	6,681	7,449	3,332	
21 Improved acreage.....	1,168	778	812	1,118	4,482	2,833	1,832	2,233	3,474	955	
22 Value of land.....	\$35,760	\$25,610	\$26,546	\$18,810	\$119,173	\$151,485	\$21,170	\$18,010	\$145,470	\$60,635	
23 Value of buildings.....	\$2,686	\$5,853	\$9,840	\$10,185	\$48,615	\$45,340	\$9,740	\$27,025	\$45,615	\$22,110

NEGRO POPULATION.

TABLE 73.—STATISTICS OF SIZE OF FARMS AND FOR TENURE CLASSES OF FARMS

NORTH CAROLINA—continued.											
	Rutherford.	Sampson.	Scotland.	Stany.	Stokes.	Surry.	Tyrrell.	Union.	Vance.	Wake.	
1	Number of farms.....	511	1,234	831	234	354	264	145	1,251	994	2,157
FARMS CLASSIFIED BY SIZE.											
2	Under 3 acres.....	26	65	3	14	21	47	20	106	89	131
3	3 to 9 acres.....	110	253	31	47	38	81	40	225	210	343
4	10 to 19 acres.....	184	551	563	98	129	85	60	502	346	922
5	20 to 49 acres.....	126	186	192	46	95	36	15	291	179	432
6	50 to 99 acres.....	50	100	29	22	62	17	7	102	113	255
7	100 to 174 acres.....	10	17	6	6	8	2	1	14	11	53
8	175 to 259 acres.....	2	3	1	1	1	1	1	1	1	21
9	260 to 499 acres.....	1	1	1	1	1	1	1	1	1	4
10	500 to 999 acres.....	1	1	1	1	1	1	1	1	1	27
11	1,000 acres and over.....	1	1	1	1	1	1	1	1	1	4
FARMERS CLASSIFIED BY TENURE.											
12	Owners, free.....	87	304	49	57	41	88	24	80	128	307
13	Owners, mortgaged.....	24	84	15	11	22	26	20	44	58	127
14	Part owners.....	83	219	3	25	33	38	26	25	120	143
15	Cash tenants.....	50	11	83	11	5	412	18	443	180	634
16	Share tenants.....	292	517	654	112	250	110	68	647	502	887
17	Share-cash tenants.....	1	21	11	1	1	1	1	4	5	28
18	Tenure not specified.....	2	35	16	1	1	1	1	6	1	4
19	Managers.....	1	1	1	1	1	1	1	2	1	4
FARMS OPERATED BY OWNERS, FREE.											
20	Total acreage.....	5,318	16,744	3,153	2,886	2,795	2,782	1,317	5,326	7,182	16,220
21	Improved acreage.....	4,322	12,180	1,987	1,252	1,186	1,177	626	3,657	3,657	7,583
22	Value of land.....	\$69,920	\$198,796	\$70,290	\$20,500	\$28,335	\$32,725	\$10,635	\$67,743	\$92,223	\$252,033

NOTES REGARDING CHANGES IN COUNTY AND CITY BOUNDARIES: 1880-1910.

ALABAMA.

Counties.

BLOUNT.—Parts annexed to Cullman between 1880 and 1890 and in 1901.
CALHOUN.—Part of Cleburne annexed in 1907; part annexed to Cleburne in 1907.
CLAY.—Part of Talladega annexed in 1905.
CELBURNE.—Part of Calhoun annexed in 1907; part annexed to Calhoun in 1907.
COLBERT.—Part annexed to Franklin between 1890 and 1900; part of Lawrence annexed between 1840 and 1900.
CULLMAN.—Parts of Blount annexed between 1880 and 1890 and in 1901.
DALE.—Part taken to form part of Houston in 1903. (See also note.)
FRANKLIN.—Part of Colbert annexed between 1890 and 1900.
GENEVA.—Part taken to form part of Houston in 1903. (See also note.)
HENRY.—Part taken to form part of Houston in 1903. (See also note.)
HOUSTON.—Organized from parts of Dale, Geneva, and Henry in 1903. (See also note.)
JEFFERSON.—Part of Shelly annexed between 1880 and 1890; part annexed to Walker between 1890 and 1900.
LAWRENCE.—Part annexed to Colbert between 1880 and 1900.
SHELBY.—Part annexed to Jefferson between 1880 and 1890.
TALLADEGA.—Part annexed to Clay in 1905.
WALKER.—Part of Jefferson annexed between 1890 and 1900.

Note.—Dale, Geneva, Henry, and Houston Counties combined—Total Negro population: 1910, 29,862; 1900, 21,031; increase, 1900-1910, 8,831; per cent of increase, 57.7.

ARKANSAS.

Counties.

ARKANSAS.—Part annexed to Jefferson between 1880 and 1890; part of Desha annexed between 1880 and 1890.
CLAY.—Part of Greene annexed between 1890 and 1900.
CRENSHAW.—Organized from parts of Independence, Van Buren, and White in 1883.
CLEVELAND.—Name changed in 1885.

 PECOS.—Parts taken to form Reeves and Terrell in 1883 and 1905, respectively; part taken to form part of Val Verde in 1885. (See also Note 1.)
 PRESIDIO.—Parts taken to form Brewster, Duchel, Foley, and Jeff Davis in 1887.
 REAGAN.—Organized from part of Tom Green in 1903. (See also Note 2.)
 REEVES.—Organized from part of Pecos in 1883.
 SCHLEICHER.—Formed from part of Crockett in 1887; organized from unorganized county of Schleicher in 1901.
 STERLING.—Organized from part of Tom Green in 1891.
 SUTTON.—Formed from part of Crockett in 1887.
 TERRELL.—Organized from part of Pecos in 1905. (See also Note 1.)
 TERRY.—Organized from unorganized county of Terry in 1904.
 TOM GREEN.—Parts taken to form Midland in 1885; Crane, Ector, Glascock, Loving, Upton, Ward, and Winkler in 1887; Coke and Irion in 1889; Sterling in 1891; and Reagan in 1903. (See also Note 2.)
 UPTON.—Formed from part of Tom Green in 1887; organized from unorganized county of Upton in 1910.
 VAL VERDE.—Organized from parts of Crockett, Kinney, and Pecos in 1885.
 WARD.—Formed from part of Tom Green in 1887.

TEXAS—continued.

Counties—Continued.

- WEBB.—Enclinal annexed in 1899.
 WINKLER.—Formed from part of Tom Green in 1887; organized from unorganized county of Winkler in 1910.
 YOAKUM.—Organized from unorganized county of Yoakum in 1909.
 Note 1.—Pecos and Terrell Counties combined—Total Negro population: 1910, 6; 1900, 22; decrease, 1900-1910, 16.
 Note 2.—Reagan and Tom Green Counties combined—Total Negro population: 1910, 718; 1900, 898; decrease, 1900-1910, 180; per cent of decrease, 20.0.

VIRGINIA.

Counties.

- ALBEMARLE.—Formerly included Charlottesville city, which was made independent in 1888.
 ALLEGHANY.—Formerly included Clifton Forge city, which was made independent in 1906.
 AUGUSTA.—Part of Augusta County annexed to Staunton city in 1905.
 BUCHANAN.—Part taken to form Dickenson in 1880.
 CAMPBELL.—Parts of Campbell County annexed to Lynchburg city in 1901 and 1908.
 CHESTERFIELD.—Formerly included Manchester city, which was made independent in 1874 and annexed to Richmond city in 1910, and part of Petersburg city, which was made independent prior to 1870.
 DICKENSON.—Organized from parts of Buchanan, Russell, and Wise in 1880.
 HENRICO.—Part of Henrico County and Manchester city annexed to Richmond city in 1906 and 1910, respectively.
 MONTGOMERY.—Formerly included Radford city, which was made independent in 1882.
 NORFOLK.—Part of Norfolk County annexed to Portsmouth city between 1890 and 1900 and in 1903, and parts annexed to Norfolk city in 1902 and 1905.
 PITTSYLVANIA.—Parts of Pittsylvania County annexed to Danville city between 1890 and 1900 and in 1907.
 ROANOKE.—Formerly included Roanoke city, which was made independent in 1884; part of Roanoke County annexed to Roanoke city between 1890 and 1913.
 ROCKBRIDGE.—Formerly included Buena Vista city, which was made independent in 1872.
 RUSSELL.—Part taken to form Dickenson in 1880.
 WARWICK.—Formerly included Newport News city, which was made independent in 1896.
 WASHINGTON.—Formerly included Bristol city, which was made independent in 1890.
 WISE.—Part taken to form Dickenson in 1880.

Cities.

- CLIFTON FORGE.—Incorporated as a city from Clifton Forge and West Clifton Forge towns, Alleghany County, and made independent in 1906.
 DANVILLE.—Part of Pittsylvania County annexed in 1907.
 LYNCHBURG.—Parts of Campbell County annexed in 1901 and 1908.
 NORFOLK.—Part of Norfolk County annexed in 1902 and part (Berkeley town) annexed in 1906.
 PORTSMOUTH.—Part of Norfolk County annexed in 1909.
 RICHMOND.—Manchester city and part of Henrico County (including Fairmount town) annexed in 1910 and 1906, respectively.
 STAUNTON.—Part of Augusta County annexed in 1905.

WEST VIRGINIA.

Counties.

- LOGAN.—Part taken to form Mingo in 1895.
 MINGO.—Organized from part of Logan in 1895.

¹ Includes population (325,464) of Indian Territory and Indian reservations, specially enumerated in 1890, but not included in the general report on population in 1890.

² Includes persons (6,100 in 1840 and 5,318 in 1830) on public ships in the service of the United States, not credited to any division or state.

³ Population for that part of Dakota territory taken from North Dakota, in 1880, 96,909; and in 1870, 2,405; and for that part taken from South Dakota, in 1880, 88,268; and in 1870, 11,776.

⁴ Dakota territory.

⁵ Includes population of Indian Territory as follows: 1900, 392,060; 1880, 180,182.

INDEX.

- Abstractors, 510.
 Accountants, 526.
 Acreage. *See* Farm acreage.
 Actors, 510, 526.
 Africa, Negroes of United States born in, 63.
 Agricultural implement factories, persons employed in, 509, 530.
 Agriculture, persons engaged in, by sex, 509, 523, 526, 529; by states, 513, 517, 521; general statistics of, 552-764.
 Alaska, Negro population of, 21, 23; total population, 22.
 Alfalfa, acreage, yield, and value of, 564.
 America, Negroes of United States born in, 63.
 Animal husbandry, persons engaged in, by sex, 509, 523, 529; by states, 513, 517, 521.
 Animals. *See* Domestic animals.
 Appendicitis, deaths from, 314, 339.
 Architects, 510, 526.
 Argentina, death rates in, 306.
 Army, officers and men in, 551.
 Art, teachers of, 510, 526.
 Artists, 510, 526.
 Asia, Negroes of United States born in, 63.
 Assault, commitments for, 438, 446.
 Assayers, 510.
 Asses and burros, value of, 563, 629.
 Atlantic Islands, Negroes of United States born in, 63.
 Australia, Negroes of United States born in, 63; death rates in, 306.
 Austria, death rates in, 306.
 Authors, 510.
 Automobile factories, persons employed in, 509, 530.
 Awning factories. *See* Sail, etc., factories.
 Bakers, 509, 527, 531.
 Banking and brokerage, persons engaged in, 510, 526, 549.
 Barbers, 517, 521, 526.
 Barley, acreage, yield, and value of, 564.
 Bartenders, 517, 526.
 Beans, acreage, yield, and value of, 564.
See also Soy beans.
 Bees, value of, 562, 629.
 Belgium, death rates in, 306.
 Beverage factories. *See* Liquor, etc., factories.
 "Black belt," increase and density of Negro population in, 108-135.
 "Black" population, term defined, 207; increase in, 210, 219; proportion of children, 213; classified by individual cities, 214, 229; school attendance, 215, 230; illiterate, 217, 231; by divisions and states, 218; free and slave, 220, 221; by sex and age, 222-224; urban and rural, 227; by counties, 798.
See also Negro population.
 Blacksmiths, 517, 527.
 Blank-book, etc., factories, persons employed in, 509, 531.
 Blast furnaces and steel rolling mills, persons employed in, 509, 531.
 Bleachery and dye-works operatives, 527.
 Blind population, classified by race, 451; by sex and age, 451, 452; ability to read raised type, 453.
 Boarding and lodging house keepers, 521, 526.
 Boat building. *See* Ship, etc., building.
 Boatmen, 526.
 Bookbinders, 527.
 Bookkeepers, 526.
 Boot and shoe makers and repairers, 527.
 Bootblacks, 517.
 Bottlers, 527.
 Box factories (paper and wood), persons employed in, 509, 531.
 Brakemen, 517.
 Brass mills, persons employed in, 509, 513, 527.
 Breweries, persons employed in, 509, 527, 532.
 Brick, tile, and terra-cotta factories, persons employed in, 509, 527, 532.
 Bridges, construction and maintenance of. *See* Streets, etc.
 Bright's disease, deaths from, 314, 339.
 Brokerage. *See* Banking, etc.
 Bronchitis, deaths from, 314, 317, 318, 339.
 Bronchopneumonia, deaths from, 317, 318.
 Broom and brush factories, persons employed in, 509, 527, 532.
 Broom corn, acreage, yield, and value of, 564.
 Buckwheat, acreage, yield, and value of, 564.
 Builders, 517.
 Building contractors, 517.
 Bulgaria, death rates in, 306.
 Burglary, commitments for, 438, 446.
 Butter and cheese factories, persons employed in, 509, 527, 533.
 Button factories, persons employed in, 509, 533.
 Cabinetmakers, 527.
 Canada and Newfoundland, Negroes of United States born in, 63.
 Candy factories, persons employed in, 509, 533.
 Canning, fruit and vegetable, persons engaged in, 510, 536.
 Car and railroad shops, persons employed in, 509, 533.
 Carpenters, 517, 526.
 Carpet mills, persons employed in, 509, 527, 533.
 Carriage factories. *See* Wagon, etc., factories.
 Cattle, value of, 563, 628.
 Cement factories. *See* Lime, etc., factories.
 Centenarians, total and Negro, 162.
 Central America, Negroes of United States born in, 63.
 Cerebral hemorrhage and softening, deaths from, 314, 339.
 Ceylon, death rates in, 306.
 Charcoal and coke works, persons employed in, 509, 527, 533.
 Charitable institutions, keepers of, 510.
 Charity workers, 510.
 Charwomen, 521.
 Chauffeurs, 517.
 Cheese factories. *See* Butter, etc., factories.
 Chemical factories, persons employed in, 509, 527, 534.
 Chemists, 510.
 Children, proportion to women of child-bearing age, 283-297; number at each census, 1830-1910, 285; commitments for offenses, 438, 446.
 Chile, death rates in, 306.
 China, Negroes of United States born in, 63.
 Chinese population, increase in, 22, 24; geographic distribution, 32; ratio of males to females, 148; by sex and age, 170; marital condition, 237; women of childbearing age, 286; deaths in registration area, 305; school attendance, 375; illiterate, 404; prisoners and juvenile delinquents, 430; blind, 451; deaf-mutes, 453; farm operators, 553.
 Cigar and tobacco factories, persons employed in, 509, 527, 534.
 Cirrhosis of the liver, deaths from, 314, 339.
 Cities, Negro population in, 93, 156, 187, 201-206, 767; white population, 93; black and mulatto population, 214; marital condition, 257, 273-282; women of childbearing age, 293-296; deaths, 320, 327, 336, 338, 340, 355; school attendance, 388, 401; illiteracy, 417-435; officials and employees, 551.
 Civil engineers, 510, 526.
 Clay products, 527.
 Cleaners and renovators of clothing, 517.
 Clergymen, 510, 517, 526.
 Clerical occupations, persons engaged in, 517, 525, 526.
 Clerks in stores, 517.
 Clock and watch factories, persons employed in, 509, 527, 534.
